Pursuant to section 8J(1) of the Agvet Code, the APVMA has decided that it is unnecessary to publish details of applications made for the purpose of notifying minor variations to registration details. The APVMA will however report notifications activity in quarterly statistical reports.

Esomeprazole magnesium trihydrate

The APVMA has before it an application for the approval of a new active constituent, esomeprazole magnesium trihydrate, proposed for use in veterinary chemical products.

Table 8: Particulars of the active constituent esomeprazole magnesium trihydrate

Common name	Esomeprazole magnesium trihydrate
IUPAC name	Magnesium bis[5-methoxy-2-[(S)-[(4-methoxy-3,5-dimethylpyridin-2-yl)methyl]sulfinyl]-1H-benzimidazol-1-ide] trihydrate
CAS name	N/A
CAS registry number	217087-09-7
Minimum purity	980 g/kg (anhydrous substance)
Molecular formula	C ₃₄ H ₃₆ MgN ₆ O ₆ S ₂ ·3H ₂ O
Molecular weight	767.2 g/mol
Structure	
Chemical family	Proton pump inhibitors
Mode of action	Esomeprazole magnesium trihydrate is the S-isomer of omeprazole, with gastric proton pump inhibitor activity. In the acidic compartment of parietal cells, esomeprazole is protonated and converted into the active achiral sulphenamide; the active sulphenamide forms one or more covalent disulfide bonds with the proton pump hydrogen-potassium adenosine triphosphatase (H ⁺ /K ⁺ ATPase), thereby inhibiting its activity and the parietal cell secretion of H ⁺ ions into the gastric lumen, the final step in gastric acid production.

Summary of the APVMA's evaluation of esomeprazole magnesium trihydrate active constituent

The APVMA has evaluated the chemistry aspects of esomeprazole magnesium trihydrate (physico-chemical properties, spectroscopic identification, manufacturing process, quality control procedures, batch analysis results and analytical methods) and found them to be acceptable.

Other compounds of toxicological significance are not expected to occur in esomeprazole magnesium trihydrate technical active constituent.

The APVMA has considered the toxicological aspects of esomeprazole magnesium trihydrate, and concluded that there are no toxicological concerns to the approval of this active constituent. Because of its use in non-food producing animals, an ADI has not been established for omeprazole (the racemic mixture) or esomeprazole in Australia and is not currently considered necessary for esomeprazole. Similarly, an Acute Reference Dose (ARfD) is not considered necessary. Use as a human medicine as well as the data on adverse experiences indicate that acute risks are not likely to result from short-term exposure in humans.

Esomeprazole is listed in Schedule 4 of the Standard for the Uniform Scheduling of Medicines and Poisons (SUSMP) with a cut-off to Schedule 2 in oral preparations containing 20 mg or less per dosage unit for the relief of heartburn and other symptoms of gastro-oesophageal reflux disease, in packs containing not more than 14 day's supply.

The main entry in Schedule 4 – ‘Esomeprazole except when included in Schedule 2’ will cover the veterinary medical use of esomeprazole containing product formulations and therefore, esomeprazole does not require rescheduling at this stage.

The APVMA is satisfied that the proposed importation and use of esomeprazole magnesium trihydrate would not be an undue toxicological hazard to the safety of people exposed to it during its handling and use.

Making a submission

In accordance with section 12 of the Agvet Code, the APVMA invites any person to submit a relevant written submission as to whether esomeprazole magnesium trihydrate should be approved. Change to conditions for the import and export of mercury

Pursuant to subsection 69C(2) of the *Agricultural and Veterinary Chemicals (Administration) Act 1992* (Administration Act), notice is hereby given that regulatory amendments are being prepared to implement Australia's obligations, in respect of agricultural and veterinary (AgVet) chemicals, under the Minamata Convention on Mercury (Minamata Convention) once it comes into force for Australia. The Minamata Convention aims to protect human health and the environment from anthropogenic emissions and releases of mercury and mercury compounds.

The proposed regulations would commence on the day after the proposed regulations are registered, provided the Minamata Convention has been ratified by Australia – otherwise the regulations will only commence once ratification has occurred. However, the proposed regulations would not commence at all if the Minamata Convention is not ratified.

Section 69C of the Administration Act allows regulations to prohibit (including subject to conditions) the import, export, use or manufacture of active constituents or chemical products. These active constituents or products must be the subject of a prescribed international agreement or arrangement. The proposed regulations would prescribe the Minamata Convention and stipulate mercury (used as an active constituent in a proposed or existing AgVet chemical product). This would also include a chemical product that is mercury or that is a mercury-added product.

- Mercury (Minamata mercury) includes mixtures of mercury (and alloys of mercury) with a mercury concentration of at least 95% by weight but would exclude non-Minamata mercury.
- Non-Minamata mercury would mean:
 - research mercury, that is, mercury used for laboratory-scale research or as a reference standard.
 - naturally occurring trace quantities of mercury in products (or products derived from these products) such as non-mercury metals, ores or mineral products (such as coal).
 - unintentional trace quantities of mercury in chemical products.
- Mercury-added products means the products listed in Part 1 of Annex A of the Minamata Convention (the Annex), which relevantly includes pesticides, biocides and topical antiseptics.
- There are various exclusions to the Annex. Most exclusions have little relevance to agvet chemical products, such as being essential for civil protection and military uses or for traditional or religious practices. It does, however, reproduce the exclusion for research mercury that is also in the definition of non-Minamata mercury. Importantly, at this time mercury-added products are intended to just relate to products containing Minamata mercury. Mercury compounds are not to be included in the proposed import and export restrictions.

Under the proposed regulations (through amendments to the *Agricultural and Veterinary Chemicals (Administration) Regulations 1995*):

- import of Minamata mercury would be prohibited unless:
 - the mercury has been imported from a party to the Minamata Convention; or
 - a permit has been issued to import the mercury from a non-party to the Minamata Convention – the permit may only be granted if Australia has consented to the import, and the exporting party has certified that the mercury is neither sourced from primary mercury mining nor is excess mercury from the decommissioning of chlor-alkali facilities. The required consent may be given by Australia on a case-by-case basis, or if a general notification of consent is in force for Australia (paragraph 7 of Article 3 of the Minamata Convention).
- export of Minamata mercury to a party to the Minamata Convention would be prohibited unless a permit has been issued. The permit may only be granted if:

- the importing party has provided written consent; or
 - the Minamata mercury is being exported, for a use allowed, to the importing party under the Minamata Convention, or for environmentally sound interim storage.
- export of Minamata mercury to a non-party to the Minamata Convention would be prohibited unless a permit has been issued. The permit may only be granted if:
 - the importing country has provided written consent and written certification demonstrating:
 - It has measures in place to ensure the protection of human health and the environment and to ensure compliance with Articles 10 (environmentally sound interim storage) and 11 (mercury waste, reflecting the Basel Convention on the Control of Transboundary Movements of Hazardous Wastes and Their Disposal) of the Minamata Convention.
 - The Minamata mercury will be used only for a use allowed to the importing country under the Minamata Convention, or for environmentally sound interim storage.
 - The existing prohibition (from the Rotterdam Convention) on mercury export, unless with written permission, will still apply to research mercury – that is, a permit may be issued only if exported to a party to the Rotterdam Convention and the export complies with the requirements of the Rotterdam Convention.
 - import, export or manufacture of mercury-added products covered by Part 1 of Annex A to the Minamata Convention (including pesticides, biocides or topical antiseptics) would be prohibited in all cases. No permits may be granted to import, manufacture or export these products.

The proposed regulation amendments will not take effect in less than 30 days from the date of this notice.
