GENERAL INFORMATION

The *APVMA (Australian Pesticides and Veterinary Medicines Authority) Gazette* is published fortnightly and contains details of the registration of agricultural and veterinary chemicals products and other approvals granted by the APVMA, notices as required by the Agricultural and Veterinary Chemicals Code (the Agvet Code) and related legislation and a range of regulatory material issued by the APVMA.

Pursuant to section 53(1) of the Agvet Code, the APVMA has decided that it is unnecessary to publish details of applications made for the purpose of notifying minor variations to registration details. The APVMA will however report notifications activity in quarterly statistical reports.

OTHER NOTICES

Preliminary Review Findings Related to Approvals and Registrations of Fipronil

Fipronil is a broad spectrum phenyl pyrazole insecticide that is used in both agricultural and veterinary situations. It controls insect pests in a wide range of agricultural crops, it is used as an insecticidal seed dressing, and it is used for the control of termites, cockroaches and ants in residential and commercial buildings. In veterinary situations, fipronil products are used as spray or concentrated spot-on formulations to control fleas, ticks and other ectoparasites on dogs and cats, and the products are used for the treatment and control of flea allergy dermatitis.

Fipronil was nominated for review following the receipt of a number of reports of adverse experiences in humans and animals. Reports primarily involved veterinary chemical products and included skin reactions in animals and humans, neurological signs and deaths in target animals (often involving concurrent infestations with paralysis ticks), and deaths following off-label use in domesticated rabbits. The review of fipronil commenced in September 2003.

The APVMA, in accordance with Part 2, Division 4, of the Agvet Codes, has reviewed the following aspects of active constituent approvals, product registrations and label approvals for fipronil:

- the toxicity of fipronil, primarily in relation to dermal irritation and the induction of skin sensitisation
- the toxicity of photodegradation products of fipronil, particularly in relation to neurotoxicity and dermal toxicity
- toxicological effects associated with products containing fipronil, including the potential to form toxic photodegradation products
- occupational health and safety issues including the risk to workers when mixing, loading and applying products containing fipronil or users using products containing fipronil
- risk to workers on re-entry to treated areas or humans handling animals after they have been treated
- animal safety
- adequacy of label instructions, including the suitability of personal protective equipment, specified re-entry intervals, and other warnings or precautionary instructions.

Following the completion of the assessment of data for the review of fipronil, the APVMA found that there should be no change to the approval status of fipronil or to the ongoing registration of existing fipronil products in Australia. However, some amendments are recommended to the first aid instructions and safety directions for most agricultural and veterinary chemical products. New or revised re-entry intervals are also recommended for many agricultural uses, and a rehandling statement is recommended for veterinary spray products.

Additional warnings are recommended when fipronil products are used on dogs and cats. This includes warnings about the possibility of skin reactions in dogs and cats treated with the spot-on formulations, avoiding applying fipronil products to 'non-healthy' skin, and for the spray, treating animals in open areas, and ensuring they are not placed in confined spaces until the spray has dried.

Fipronil is not recommended for use on non-target animals, especially rabbits. Additional label warnings concerning off-label use on rabbits are recommended due to the severity of reactions (including death) in this species.

In view of these findings, the APVMA proposes to take the following regulatory actions:

- a) Affirm active constituent approval (Table 1)
- b) Vary label approvals (Table 2).

To satisfy the requirements for continued registration of products, the following label variations are proposed:

- inclusion of the amended first aid and safety directions for fipronil-containing products;
- inclusion of new or amended re-entry intervals and rehandling periods; and
- inclusion of appropriate warnings relating to animal safety.

- c) Affirm product registrations.

If the proposed label variations are made then the product registrations and label approvals of the products listed in Table 2 can be affirmed.

- d) Cancel product label approvals.

The APVMA proposes that all previously approved label approvals be cancelled. The basis for this is that they do not contain adequate instructions in relation to the continued requirements for registration and approval.

The APVMA's detailed findings can be found in the APVMA's Preliminary Review Findings, available on the APVMA website, <http://www.apvma.gov.au>.

Dimethyl Sulphate

INCLUSION OF DIMETHYL SULPHATE AS A TOXICOLOGICAL IMPURITY AT LEVELS BELOW 1 G/KG

The APVMA has received advice from the Office of Chemical Safety and Environmental Health (OCSEH) regarding the impurity Dimethyl Sulphate. The details states:

In relation to the impurity dimethyl sulphate that has been identified in a new TGAC of methamidophos, the OCSEH recommend that this impurity be added to the list of toxicologically significant impurities on the APVMA website given the potential health hazard at levels below 1 g/kg.

The APVMA intends to include dimethyl sulphate in the list of Toxicologically Significant Impurities on the APVMA website, Definition of Standards for Active Constituents, under the heading Toxicologically Significant Impurities. The webpage can be found: http://www.apvma.gov.au/products/constituents/standards/actives_definition.php

The APVMA publishes complete application summaries on the APVMA website, www.apvma.gov.au. They are published in weekly instalments using the date the application was accepted for assessment. If an application summary has been amended, the APVMA will publish the amended version on the website and list it separately in the APVMA Gazette Notice for Application Summaries.

As a requirement of Regulations 8C and E of the Agvet Code, some product names will appear as 'NOT AVAILABLE'.
