The suspensions are in effect until 31 January 2013.

REASONS

The APVMA has decided that the continued use of, or other dealings with products containing 2,4-D HVE in accordance with current label instructions may be likely to have an unintended effect that is harmful to animals, plants or things or to the environment. In addition, the APVMA has decided that the instructions on currently approved labels for the products may no longer be adequate.

Since 26 September 2006, registrations of products containing 2,4-D HVE and associated label approvals have been suspended primarily because of concerns about damage to non-target crops and vegetation from HVE vapour drift. The APVMA has issued instructions for dealing and using suspended products during the spray window between 1 May and 31 August. Application of 2,4-D HVE only within this spray window would minimise the risk of unintended harmful effects to native vegetation and susceptible crops.

INSTRUCTIONS FOR POSSESSING, HAVING CUSTODY OF, USING OR DEALING WITH SUSPENDED PRODUCTS, OR PRODUCT CONTAINING THE SUSPENDED LABELS

Subsections 45A(5) and 55(3) of the Agvet Code cease to apply in respect of the products identified in the table above. During the 12 month period of suspension, a person may not possess, have custody of, use or deal with any of the products other than in accordance with:

- the instructions set out at the end of this Notice; and
- a permit issued by the APVMA.

New permits, with modified instructions for use, have been issued under section 114 of the Agvet Code (PER 13339 for use during the 'winter window').

WARNING

From 1 February 2012 a person may only possess, have custody of, use or otherwise deal with the products identified above in accordance with any permit issued by the APVMA and the instructions set out at the end of this Notice (see Attachment 1).

Depending on further information that may be received and assessed for the ongoing review of 2,4-D products, the APVMA may cancel any permit(s) and issue replacement permit(s) at any time prior to the expiry dates on the permits. Before using, supplying or otherwise dealing with products containing 2,4-D HVE, suppliers and users need to be satisfied that the instructions set out at the end of this Notice continue to apply, and that their activities are authorised by a permit. Current permits are available at <http://www.apvma.gov.au/permits/search.php>

Failure to comply with the instructions set out at the end of this Notice attracts a penalty under section 55(4) of the Agvet Code. The penalty is 300 penalty units (\$33,000).

It is also an offence to advertise or promote the use of the products during the period of suspension (other than for the purposes of advising users about the modified instructions for use).

Buffer zones

Use only Coarse to Very Coarse spray quality according to ASAE S572 definition for standard nozzles, and a buffer zone of 100 m between field edges and downwind water bodies, native vegetation and sensitive crops.

Permissible Dates of Application of 2,4-D High Volatile Esters

Application of 2,4-D ethyl ester, butyl ester or isobutyl ester must only take place during a spray window between **1 May and 31 August**.

Victoria, Western Australia, Tasmania and Queensland currently have mechanisms whereby the use of specific chemicals (including 2,4-D) is restricted to geographical areas and/or time zones due to the higher risk for adverse off-target crop or environmental effects. These state restrictions on 2,4-D use may place additional requirements on users within this spray window between 1 May and 31 August, for example, length of the spray window and spray equipment. Users must consult their local authority or department of agriculture to ensure they meet state requirements.

Application of 2,4-D only within this spray window will minimise the risk of unintended harmful effects to native vegetation and susceptible crops. Avoid spraying upwind of nearby susceptible crops.

RECORD KEEPING REQUIREMENTS

Within 24 hours of completing a 2,4-D ethyl, butyl or isobutyl ester application all users **must** make and keep a record of each application. The details required in a 2,4-D ester spray record must contain at least the information set out below. It is the recommended and considered good practice, that the grower collects from any person acting on his or her behalf a copy of the 2,4-D ester spray record. (For convenience, a 2,4-D record-keeping form can be obtained from the Australian Pesticides and Veterinary Medicines Authority website.)

General:

Name and address of farm owner (or grower if grower is not owner)	Name and address of person who applied 2,4-D	Date of application

1. Warning

These products are unregistered and labels are not approved during the period of suspension. A person must not possess with the intent to supply, or deal with any of these products during this period except in accordance with the instructions contained in this notice. A failure to comply with them will result in an offence against the Agvet Codes and the APVMA will take appropriate compliance action.

Variations to Standard 1.4.2 of the *Australia New Zealand Food Standards Code*

The APVMA has previously gazetted particular amendments which it had made to the APVMA *MRL Standard* and which have been proposed as variations to maximum residue limits (MRLs) for substances contained in agricultural and veterinary chemical products as set out as in Standard 1.4.2-Maximum Residue Limits of the *Australia New Zealand Food Standards Code*. This notice pertains to proposals (numbered 5O) gazetted on 8 November 2011 (No. APVMA 22).

Submissions have been sought on these proposals and the APVMA has written separately to each person or organisation that made a submission. All matters raised in the submissions have been resolved.

Under subsection 82(1) of the *Food Standards Australia New Zealand Act 1991*, the APVMA has, by legislative instrument, incorporated these variations to MRLs into Standard 1.4.2. A copy of the Amendment Instrument (No. APVMA 1, 2012) accompanies this notice. For a complete and up-to-date version of Standard 1.4.2, including these amendments together with their Explanatory Statement, please refer to the Federal Register of Legislative Instrument available on the Comlaw website at <http://www.comlaw.gov.au>.

Based on dietary exposure assessments and current health standards, the APVMA and FSANZ are satisfied that these MRLs are not harmful to public health. MRLs contained in Standard 1.4.2 provide the limits for residues of agricultural and veterinary chemicals that may legitimately occur in foods. By this means, Standard 1.4.2 permits the sale of treated foods and protects public health by minimising residues in foods consistent with the effective control of pests and diseases.

The Agreement between the Government of Australia and the Government of New Zealand concerning a Joint Food Standards System, excludes MRLs for agricultural and veterinary chemicals in food from the system setting joint food standards. Australia and New Zealand independently and separately develop MRLs for agricultural and veterinary chemicals in food.

Food Standards Australia New Zealand (FSANZ) made Sanitary and Phytosanitary (SPS) notification to the World Trade Organization (WTO) in relation to these variations and no comment was received in response to that notice.

A copy of these variations have been given to FSANZ.

The variations take effect as from the date of this notice.

This notice is published in accordance with subsection 82(7) of the *Food Standards Australia New Zealand Act 1991*.

**STATEMENT OF COMPATIBILITY FOR A LEGISLATIVE INSTRUMENT
THAT DOES NOT RAISE ANY HUMAN RIGHTS ISSUES**

Statement of Compatibility with Human Rights

Prepared in accordance with Part 3 of the Human Rights (Parliamentary Scrutiny) Act 2011

Australia New Zealand Food Standards Code—Standard 1.4.2—

Maximum Residue Limits Amendment Instrument No. APVMA 1, 2012

This Legislative Instrument made by the Australian Pesticides and Veterinary Medicines Authority (APVMA) is compatible with the human rights and freedoms recognised or declared in the international instruments listed in section 3 of the *Human Rights (Parliamentary Scrutiny) Act 2011*.

Requirement for a Statement of Compatibility with Human Rights

This Legislative Instrument made by the APVMA is not a disallowable instrument pursuant to section 82(2) of the *Food Standards Australia New Zealand Act 1991* and therefore the Statement of Compatibility with Human Rights is not strictly required. Nonetheless, to accord with the spirit of the *Human Rights (Parliamentary Scrutiny) Act 2011*, the APVMA provides this Statement of Compatibility.

Overview of the Legislative Instrument

This Legislative Instrument makes variations to Standard 1.4.2 — Maximum Residue Limits of the *Australia New Zealand Food Standards Code* to include or change maximum residue limits (MRLs) pertaining to agricultural and veterinary chemical products. The variations made to Standard 1.4.2 in this Amendment Instrument put into the Food Standards Code MRLs previously approved by the APVMA as part of the registration of the relevant chemical products. The variations have the effect of allowing the sale of food containing residues within the approved maximum limits but do not present any public health or safety concerns. The variations also do not affect the rights or freedoms of any humans.

Human rights implications

This Legislative Instrument does not engage any of the applicable rights or freedoms.

Conclusion

This Legislative Instrument is compatible with human rights as it does not raise any human rights issues.

Dr Rajumati Bhula, Program Manager, Pesticides Program, APVMA
