## NOTICE – NEW AGRICULTURAL CHEMICAL PRODUCTS

### Saflufenacil in the product Sharpen WG Herbicide

The Australian Pesticides and Veterinary Medicines Authority (APVMA) has before it an application from BASF Australia Pty Ltd, for registration of a new product containing the active constituent Saflufenacil. The product is **Sharpen WG Herbicide**. The product is a post-emergence herbicide to be added to glyphosate herbicide (Roundup Attack Herbicide) to improve the control of certain broadleaf weeds including fleabane prior to the establishment of fallows, prior to establishing winter and summer broad acre crops and forestry plantations, in commercial, industrial and public service areas, around agricultural buildings, yards and other farm situations.

### PARTICULARS OF THE APPLICATION

<b>Proposed Product Name(s):</b>	Sharpen WG Herbicide
<b>Applicant Company:</b>	BASF Australia Pty Ltd
<b>Name of Active Constituent:</b>	Saflufenacil
<b>Signal Heading:</b>	Schedule 5
<b>Summary of Proposed Use:</b>	A post-emergence herbicide to be added to glyphosate herbicide to improve the control of certain broadleaf weeds
<b>Pack Sizes:</b>	1 kg and 5 kg
<b>Withholding Period:</b>	Harvest: Not required when used as directed Grazing: Do not graze treated broadacre crops or cut for stock food for 5 weeks after application. Do not allow livestock to graze treated weeds.

### SUMMARY OF THE APVMA'S EVALUATION OF SHARPEN WG HERBICIDE IN ACCORDANCE WITH SECTION 14(3)(E) AND (F) OF THE AGRICULTURAL AND VETERINARY CHEMICALS CODE (THE 'AGVET CODE'), SCHEDULED TO THE *AGRICULTURAL AND VETERINARY CHEMICALS CODE ACT 1994*.

The APVMA has evaluated the application and in its assessment in relation to human and environmental safety under section 14(3)(e) of the Agvet Code, it proposes to determine that:

- (i) The APVMA is satisfied that the proposed use of Sharpen WG Herbicide would not be an undue hazard to the safety of people exposed to it during its handling and use.

The Office of Chemical Safety (OCS) in the Department of Health and Ageing has conducted a risk assessment on the product and concluded that it can be used safely.

Workers may be exposed to the products when opening containers, mixing/loading, application, and cleaning up spills and equipment. The main route of exposure to the product/spray will be dermal and inhalation, although ocular exposure is also possible.

Exposure to the product was at an acceptable level when wearing cotton overalls buttoned to the neck and wrist and elbow-length chemical resistant gloves for opening the container and preparing spray.

Users should follow the First Aid Instructions, Warning Statement, Safety Directions and Re-entry statement on the product label.

The APVMA accepts the findings and recommendations of the OCS evaluation.

- (ii) The APVMA is satisfied that the proposed use of Sharpen WG Herbicide will not be an undue hazard to the safety of people using anything containing saflufenacil residues.

Sharpen WG Herbicide is intended for application as a tank mix with glyphosate to control a range of broadleaf and grass weeds in cereal, cotton, legume and pulse crops when applied prior to sowing the crop, as well as for weed control in industrial, commercial and public areas, and when commencing or maintaining a fallow. The APVMA Residues section has evaluated the residues aspects of the proposed product and recommended amendments to the APVMA maximum residue limit (MRL) standard for saflufenacil and for inclusion in the Food Standards Code. Recommendations in regard to the required withholding period and protection statements for Livestock and others have been included on the label.

- (iii) The APVMA is satisfied that the proposed use of Sharpen WG Herbicide containing the active constituent saflufenacil is not likely to be harmful to human beings if used according to the product label directions.

The new active constituent saflufenacil has been evaluated for approval. The appropriate signal heading is on the label. First Aid and Safety Directions recommended by the Department of Health and Ageing have been included on the label.

Saflufenacil and Sharpen WG Herbicide were of low acute oral, dermal and inhalational toxicity in rats, and both were slightly irritant to the eyes and skin of rabbits, but were not skin sensitisers in guinea pigs. Long term studies indicate that saflufenacil was not carcinogenic in mice and rats. Saflufenacil was not mutagenic or genotoxic *in vitro* and was not genotoxic *in vivo*.

The APVMA accepts the findings and recommendations of its advisors on these criteria.

- (iv) The APVMA is satisfied that the proposed use of the new products Sharpen WG Herbicide containing the new active constituent, saflufenacil, would not be likely to have an unintended effect that is harmful to animals, plants or things or the environment.

The Department of the Environment, Sustainability, Water, Population and Community (DSEWPaC) has assessed data in support of the proposed use and has concluded that the risks to the environment from this use are acceptable.

Aerobic aquatic metabolism and aerobic soil degradation are expected to be the major routes of dissipation and breakdown of saflufenacil in the environment. Field dissipation studies show that saflufenacil is readily to fairly degradable and its residues were generally restricted to the top soil layer with degradation of the saflufenacil further limiting its mobility in the soil profile. Saflufenacil has a low potential for bioaccumulation in fish.

Saflufenacil is practically non-toxic to birds, and to most aquatic organisms including fish and aquatic invertebrates. It is moderately to very highly toxic to algae and aquatic plants. Saflufenacil is very slightly toxic to terrestrial invertebrates. Consistent with its herbicidal nature it is very highly toxic to terrestrial plants.

The risk to aquatic species is acceptable based on the results of runoff and spray drift modelling. Saflufenacil may have harmful effects on non-target terrestrial plants; however, the risk to these, including from the tank mix with glyphosate, is expected to be acceptable provided applications are subject to the significant buffers and spray quality restrictions stated on the product labels.

The APVMA has considered the findings of the DSEWPac and accepts these conclusions.

- (v) The APVMA is satisfied that the proposed use of Sharpen WG Herbicide containing the active constituent, saflufenacil would not adversely affect trade between Australia and places outside Australia.

MRLs at the limit of quantification are proposed for plant commodities, meat, milk, offal, and eggs. The risk to Australian exports of any of the relevant commodities is considered to be low.

- (vi) In relation to its assessment of efficacy under section 14(3)(f), the APVMA is satisfied that data from trials supporting the efficacy of the product adequately demonstrate that if used according to the product label directions, the product is effective for the proposed uses.

### REASONS FOR THE RENEWAL OF THIS SUSPENSION

- These product labels were included in a suspension of carbendazim products on 25 Jan 2010. These labels do not include the new instructions issued as part of that suspension.
- The dietary exposure, public exposure and occupational health and safety concerns that formed the basis of the original suspension have not altered.

The approvals and registrations of carbendazim remain under reconsideration on the basis of the potential for an undue hazard to human health and to those exposed to carbendazim during its handling, as well as concerns over the adequacy of labelling (APVMA April 2007 Gazette).

The APVMA has issued the following instructions that allow for the continued supply and use of carbendazim during the period of suspension. These instructions **are identical to those issued in January 2010**. Further changes have been proposed and will be implemented when the review of carbendazim is finalised.

### INSTRUCTIONS FOR POSSESSING, HAVING CUSTODY OF, USING OR DEALING WITH PRODUCT CONTAINING THE SUSPENDED LABEL

These instructions apply to all products containing carbendazim bearing the suspended labels until either the suspension ends, is revoked, OR the APVMA issues new instructions for products containing carbendazim.

In all States and Territories the following are new instructions for products containing carbendazim. All other label instructions continue to apply unless otherwise specified below.
