GENERAL INFORMATION

The *APVMA (Australian Pesticides and Veterinary Medicines Authority) Gazette* is published fortnightly and contains details of the registration of agricultural and veterinary chemicals products and other approvals granted by the APVMA, notices as required by the Agricultural and Veterinary Chemicals Code (the Agvet Code) and related legislation and a range of regulatory material issued by the APVMA.

Pursuant to section 53(1) of the Agvet Code, the APVMA has decided that it is unnecessary to publish details of applications made for the purpose of notifying minor variations to registration details. The APVMA will however report notifications activity in quarterly statistical reports.

DISTRIBUTION AND SUBSCRIPTION

From February 2010, the APVMA will publish the *APVMA Gazette* in electronic format only. The *APVMA Gazette* and information about subscribing to the gazette alert service are available on the APVMA website, www.apvma.gov.au.

APVMA CONTACTS

For enquiries regarding the publishing and distribution of the *APVMA Gazette*, please email: communications@apvma.gov.au.

For enquiries on the *APVMA Gazette* content, please refer to the individual APVMA contacts listed under each notice.

Erratum Notice

The Australian Pesticides and Veterinary Medicines Authority advises that an error was published in the Commonwealth of Australia Gazette for Agricultural and Veterinary Chemicals, No. APVMA 6, 27 March 2012.

In the notice, Reconsideration of Active Constituents, Selected Registrations and Label Approvals Related to Diuron, the APVMA announced various decisions in relation to the review of diuron. In the notice, Table 4 listed those active constituent approvals that were subject to the outcomes of the review. Active approval number 53534 was incorrectly displayed in this table.

The entire notice Reconsideration of Active Constituents, Selected Registrations and Label Approvals Related to Diuron is republished on page 28. Changes apply only to Table 4 on page 28 of this Gazette.

The Australian Pesticides and Veterinary Medicines Authority advises that an error was published in the Commonwealth of Australia Gazette for Agricultural and Veterinary Chemicals, No. APVMA 8, 24 April 2012.

In the notice, Nova Agro Haloxyfop 520 Herbicide incorrectly identified the active constituent as haloxyfop.

The correct entry for the Notice of Registration for Nova Agro Haloxyfop 520 Herbicide appears on page 4 of this Gazette.

The Australian Pesticides and Veterinary Medicines Authority advises that an error was published in the Commonwealth of Australia Gazette for Agricultural and Veterinary Chemicals, No. APVMA 15, 2 August 2011.

In the notice, Agspray Chlorsulfuron 750 WDG Herbicide incorrectly identified the product name.

The correct entry for the Notice of Registration for Agspray Chlorsulfuron 750 WDG Herbicide appears on page 4 of this Gazette.

Veterinary Chemical Products

Pursuant to the Agricultural and Veterinary Chemicals Code scheduled to the *Agricultural and Veterinary Chemicals Code Act 1994*, the APVMA hereby gives notice that it has registered or varied the registration in respect of the following products, with effect from the dates shown.

3. VETERINARY PRODUCTS BASED ON EXISTING ACTIVE CONSTITUENTS

Product Name:	Stable-Pro Equine Liquid Tapewormer Broad Spectrum Wormer And Boticide For Horses
Active Constituent/s:	75mg/mL praziquantel, 10mg/mL ivermectin
Applicant Name:	Virbac (Australia) Pty Ltd
Applicant ACN:	003 268 871
Summary of Use:	For use in the treatment and control of tapeworm, large and small strongyles, hairworms, pinworms, roundworms (ascarids), intestinal threadworms, large mouthed stomach worms, bots (larval stages), lungworms and nematode skin lesions caused by Habronema and Draschia spp. (summer sores) and Onchocerca spp. in horses
Date of Registration:	24 April 2012
Label Approval No:	66817/54463

Product Name:	Woolworths Home Brand Heartworm Tablets For Dogs 200mg
Active Constituent/s:	Each tablet contains 200mg diethylcarbazine citrate (equivalent to 101.8mg diethylcarbazine)
Applicant Name:	Cara Pet Pty Ltd
Applicant ACN:	107 205 603
Summary of Use:	For the prevention of heartworm disease (<i>Dirofilaria immitis</i>) in dogs
Date of Registration:	24 April 2012
Label Approval No:	67478/56153

Product Name:	Natrozol Powder - A Source Of Gamma Oryzanol For Horses
Active Constituent/s:	25mg gamma oryzanol
Applicant Name:	Ceva Animal Health Pty Ltd
Applicant ACN:	002 692 426
Summary of Use:	For use as a complementary animal health product that may be of benefit in stimulating the appetite of horses in training
Date of Registration:	27 April 2012
Label Approval No:	55619/45487

Product Name:	Natrozol Forte Powder - A Source of Gamma-oryzanol For Horses
Active Constituent/s:	50mg gamma-oryzanol
Applicant Name:	Ceva Animal Health Pty Ltd
Applicant ACN:	002 692 426
Summary of Use:	For the use as a complementary animal health product
Date of Registration:	30 April 2012
Label Approval No:	63525/45870

4. VARIATIONS

Product Name:	Ranvet's Settle'em - Supplement For Nervous Horses
Applicant Name:	Ranvet Pty. Limited
Applicant ACN:	001 606 033
Summary of Variation:	To change the product name from 'SETTLE'EM - SUPPLEMENT FOR NERVOUS HORSES' to 'RANVET'S SETTLE'EM - SUPPLEMENT FOR NERVOUS HORSES'
Date of Variation:	23 April 2012
Label Approval No:	55290/53747

NOTICE—NEW AGRICULTURAL CHEMICAL PRODUCTS

Propylene Oxide in the product Dibbs Progas Fumigant

The Australian Pesticides and Veterinary Medicines Authority (APVMA) has before it an application from **RA DIBBS & SONS PTY LTD** for registration of a new product containing the Propylene Oxide. The product is **DIBBS PROGAS FUMIGANT**. The product is for use to control microbiological spoilage in shelled almonds.

PARTICULARS OF THE APPLICATION

Proposed Product Name(s):	DIBBS PROGAS FUMIGANT
Applicant Company:	RA DIBBS & SONS PTY LTD
Name of Active Constituent:	Propylene Oxide
Signal Heading:	Schedule 7
Summary of Proposed Use:	For the control microbiological spoilage in shelled almonds
Pack Sizes:	200L
Withholding Period:	DO NOT apply to nuts within 15 Days of shipment for use for human consumption

SUMMARY OF THE APVMA'S EVALUATION OF DIBBS PROGAS FUMIGANT IN ACCORDANCE WITH SECTION 14(3)(E) AND (F) OF THE AGRICULTURAL AND VETERINARY CHEMICALS CODE (THE 'AGVET CODE'), SCHEDULED TO THE *AGRICULTURAL AND VETERINARY CHEMICALS CODE ACT 1994*

The APVMA has evaluated the application and in its assessment in relation to human and environmental safety under section 14(3)(e) of the Agvet Code, it proposes to determine that:

- (i) The APVMA is satisfied that the proposed use of Dibbs Progas Fumigant would not be an undue hazard to the safety of people exposed to it during its handling and use when used in accordance with the proposed label directions.

The Office of Chemical Safety (OCS) in the Department of Health and Ageing has conducted a risk assessment on the product and concluded that it can be used safely when used in accordance with the proposed label directions. Based on worker exposure data, the toxicology data and other information on the product provided and considered in the risk assessment, the First Aid Instructions, Warning Statement, Safety Directions, Precaution Statements and Re-handling statement have been established to minimise worker exposure to the lowest practicable level, i.e. below 5 ppm propylene oxide for short term exposure, and below 1 ppm for long term exposure

The APVMA accepts the findings and recommendations of the OCS evaluation.

- (ii) The APVMA is satisfied that the proposed use of Dibbs Progas Fumigant will not be an undue hazard to the safety of people using anything containing its residues provided the product is used in accordance with the proposed label directions.

The APVMA are proposing to recommend the inclusion of an MRL for propylene oxide in almonds of 100mg/kg. Both long term (chronic) and short term (acute) dietary exposure as estimated by the National Estimated Dietary Intake and National Estimated Short Term Intake calculations respectively are acceptable.

- (iii) The APVMA is satisfied that the proposed use of **DIBBS PROGAS FUMIGANT** containing the active constituent Propylene Oxide is not likely to be harmful to human beings if used according to the product label directions.

The product Dibbs Progas Fumigant is a liquid (vapour producing) formulation containing the active ingredient propylene oxide at 830 g/L. It will be used in fumigation of almonds for the control of insects and microbiological spoilage. It is new to the Australian market and is intended as a replacement for fumigants such as methyl bromide, ethylene dibromide and ethylene oxide.

In animal studies, propylene oxide is of moderate acute oral and dermal toxicity, and low inhalational toxicity. However, acute exposure to 400 ppm is likely to be immediately dangerous to life and health in humans. Propylene oxide is a moderate to severe irritant to skin and eyes, and may cause allergic contact dermatitis in humans.

First aid and Safety Directions recommended by the Office of Chemical Safety have been included on the label.

The APVMA accepts the findings and recommendations of its advisors on these criteria.

- (iv) The APVMA is satisfied that the proposed use of **DIBBS PROGAS FUMIGANT** is not likely to have an unintended effect that is harmful to animals, plants or the environment if used according to the product label directions.

The proposed use of Dibbs Progas Fumigant is limited to fumigation chambers fitted with scrubbers and mist eliminators to ensure environmental release of the exhaust gas is negligible. There are sufficient data available in literature sources to perform an adequate risk assessment. DSEWPaC concludes that use of propylene oxide as a fumigant of commodities to control microbial contamination does not present a hazard to the environment, provided that, the label recommendations are followed when using the product and fumigation occurs in airtight chambers fitted with efficient scrubbers to remove propylene oxide.

- (v) The APVMA is considering whether the proposed use of **DIBBS PROGAS FUMIGANT** would not adversely affect trade between Australia and places outside Australia.

- (vi) In relation to its assessment of efficacy under section 14(3)(f), the APVMA is satisfied that data from trials supporting the efficacy of the product adequately demonstrate that if used according to the product label directions, the product is effective for its proposed uses.

FURTHER INFORMATION

A Public Release Summary (PRS) of the evaluation of this product is available from the APVMA website's 'Public Consultation' page, www.apvma.gov.au/consultation/public or by contacting the contact officer listed below.

MAKING A SUBMISSION

In accordance with sections 12 and 13 of the Agvet Code, the APVMA invites any person to submit a relevant written submission as to whether the application for registration of **DIBBS PROGAS FUMIGANT** should be granted. Submissions should relate only to matters that the APVMA is required by legislation to take into account in deciding whether to grant the application. These grounds include **occupational health and safety, chemistry and manufacture, residues, safety and first aid, environmental fate and toxicity, trade and efficacy**. Submissions should state the grounds on which they are based. Comments received outside these grounds cannot be considered by the APVMA.

Submissions must be received by the APVMA within **28 days** of the date of this notice and be directed to the contact listed below. All submissions to the APVMA will be acknowledged in writing via email or by post.

Relevant comments will be taken into account by the APVMA in deciding whether the product should be registered and in determining appropriate conditions of registration and product labelling.

When making a submission please include:

- Contact name
- Company or Group name (if relevant)
- Email or postal address
- The date you made the submission.

All personal and **confidential commercial information (CCI)**¹ material contained in submissions will be treated confidentially.

Written submissions on the APVMA's proposal to grant the application for registration that relate to the **grounds for registration** should be addressed in writing to:

Reconsideration of Active Constituents, Selected Registrations and Label Approvals Related to Diuron

This is a republication of the diuron notice from the Commonwealth of Australia Gazette for Agricultural and Veterinary Chemicals, No. APVMA 6, 27 March 2012, in order to correct information in Table 4 on page 28 of this Gazette.

The APVMA, in accordance with Part 2, Division 4, of the Agvet Codes, has reconsidered all approvals of the active constituent diuron, registrations of all products containing diuron and the approvals of all associated product labels.

Diuron is a broad-spectrum residual herbicide used in agriculture for pre- and post-emergent control of broadleaf and grass weeds. It was first registered in Australia in 1978. As at 20 February 2012 there are currently 101 registered products containing diuron of which 66 are affected by the suspension proposal.

The APVMA commenced its review of products containing diuron in 2002 due to concerns about the potential impact of diuron on the environment and to human health. Of particular concern was the impact of diuron use on aquatic ecosystems, including the Great Barrier Reef.

A Preliminary Review Findings (PRF) Report was released for public comment in July 2005. This report identified that for most uses specified on labels, there was the potential for diuron to result in adverse effects on aquatic species. A maximum rate of 0.9 kg ac/ha was proposed at this time.

Following the assessment of a significant amount of new data and information the 2005 environmental assessment component of the review report was substantially revised and published as the 2011 Report. The 2011 environmental assessment was very different from the 2005 PRF, utilising revised ecotoxicity endpoints, improved modelling, a greater use of monitoring data, and consideration of risks associated with all diuron uses in broadacre agriculture. The PRF focussed primarily on use in sugarcane. The 2011 environmental assessment report, as with the 2005 PRF, identified risks to aquatic environments from all uses of diuron. The 2011 report identified risks to primary and secondary streams based on adverse impacts on algae and aquatic plants, but not to the Great Barrier Reef.

The toxicology assessment prepared as part of the review was also published in 2011. This assessment identified that there were no concerns for public health with the continued approval of diuron active constituent.

On the 24 November 2011 the APVMA suspended the registrations and label approvals of 66 registered diuron products. The suspension was put in place until 31 March 2012 during which time new information was to be assessed and a revised environmental assessment report prepared. New instructions for the use of diuron during the suspension period were issued via APVMA permits (PER13198 and PER13239).

This suspension did not affect antifouling paints, aquarium or pond products containing diuron.

The APVMA has now completed the reconsideration of the active constituent approvals of diuron, registrations of selected products containing diuron and the approvals of all associated product labels.

Following the finalisation of its reconsideration of diuron, the APVMA is satisfied that active constituents of diuron (listed in Table 1) meet the requirements for continued approval. As a result, the active constituent approvals for diuron are affirmed.

The APVMA is satisfied that the requirements for continued registration of selected antifouling paints, aquarium and pond products and approval of associated labels are met. On this basis the registration of these products and associated label approvals in Table 2 have been affirmed.

The APVMA has also cancelled all previously approved labels for these products (s.41 of the Agvet Codes) as they no longer contain adequate instructions for the safe use of the products. Cancelled labels are denoted with 'c' in Table 2 below. A 2 year period from the date of cancellation will apply for the phase out of products bearing a cancelled label.

NB: 'c' denotes label approvals cancelled as an outcome of the review

The APVMA is not satisfied that the requirements for continued registration of products and approvals of associated labels for products listed in Table 3 are met. However, the APVMA is satisfied that the label particulars can be varied in such a way that the products can be used without being likely to have an unintended effect that is harmful to animals, plants or things, or to the environment. Accordingly, the APVMA has varied the label particulars [s.34(5) of the Agvet Codes]. On this basis the APVMA is satisfied that continued registration of these products in accordance with their instructions for use would not be likely to have an unintended effect that is harmful to animals, plants or things or to the environment. The APVMA has affirmed the registration of these products.

The review is now considered complete for the active constituent approvals listed in Table 1, and the product registrations and label approvals listed in Tables 2 and 3.

The following active constituent approvals (Table 4) and product registrations (Table 5) occurred after the commencement of the diuron review in 2002. Continued approval and registration is subject to the outcomes of the review.

The APVMA has determined that there are no outcomes of the review relevant to these products and therefore no further action with respect to the diuron review is required. Continued approval and registration is supported

Amendments to the APVMA MRL Standard

The Australian Pesticides and Veterinary Medicines Authority (APVMA) approves maximum residue limits (MRLs) of agricultural and veterinary chemicals in agricultural produce, particularly produce entering the food chain. The MRLs approved by the APVMA are associated with a regulatory decision to register a product, grant a permit approval, or as an outcome from a review decision and are set out in the *MRL Standard* published by the APVMA. The *MRL Standard* lists MRLs of substances that may arise from the approved use of agricultural and veterinary chemical products containing those substances on commodities used for human consumption as well as livestock feeds. The *MRL Standard* also provides the relevant residue definitions to which these MRLs apply. There may be situations where the residue definition for monitoring and enforcement is different to the definition used for dietary risk assessment purposes.

MRLs are set at levels which are not likely to be exceeded if the agricultural or veterinary chemicals are used in accordance with approved label instructions. In considering MRLs and variation to MRLs, the APVMA takes into account studies on chemistry, metabolism, analytical methodology, residues, toxicology, good agricultural practice and dietary exposure. In approving MRLs, the APVMA is satisfied, from dietary exposure assessment, that the levels set are not an undue hazard to human health.

The *MRL Standard* is accessible via the APVMA website www.apvma.gov.au.

The APVMA has varied the *MRL Standard* as set out below with effect from the date of this notice.

AMENDMENT No. 110, 2012

Note: “*” denotes that the maximum residue limit (MRL) has been set at or about the limit of analytical quantitation (see: Residue Guideline No.4, *Maximum Residue Limit Proposals ‘At or about the Limit of Analytical Quantitation’*, published in NRA Gazette No.9, p44, 5/9/95).

‘T’ denotes that the MRL, residue definition or use is temporary to enable further experimental work to be carried out in Australia or overseas, and will be reconsidered at some future date.

Proposal to Amend Standard 1.4.2 of the Australia New Zealand Food Standards Code

In the previous notice, the APVMA gazetted particular amendments which it has approved varying maximum residue limits (MRLs) for substances contained in agricultural and veterinary chemical products as set out as in the APVMA's *MRL Standard*.

Under Section 82 of the *Food Standards Australia New Zealand Act 1991* the APVMA is proposing to incorporate these variations (numbered 110) to MRLs into Standard 1.4.2 - Maximum Residue Limits of the Australia New Zealand Food Standards Code.

MRLs contained in Standard 1.4.2 provide the limits for residues of agricultural and veterinary chemicals that may legitimately occur in foods. By this means, Standard 1.4.2 permits the sale of treated foods and protects public health and safety by minimising residues in foods consistent with the effective control of pests and diseases.

The APVMA and FSANZ are satisfied, based on dietary exposure assessments and current health standards, that the proposed limits are not harmful to public health.

The Agreement between the Government of Australia and the Government of New Zealand concerning a Joint Food Standards System, excludes MRLs for agricultural and veterinary chemicals in food from the system setting joint food standards. Australia and New Zealand independently and separately develop MRLs for agricultural and veterinary chemicals in food.

Food Standards Australia New Zealand (FSANZ) will make a Sanitary and Phytosanitary (SPS) notification to the World Trade Organization (WTO).

The APVMA invites comment on these proposals. Details on how to make a submission appear near the end of this notice, below the details of the proposed amendment.

The APVMA will consider any public comments made in response to this proposal. If the APVMA decides to proceed with the proposal, it will further notify any variations it makes to Standard 1.4.2 in the APVMA *Gazette*. The variations will take effect as from the date of that subsequent notice.

DRAFT VARIATIONS TO THE AUSTRALIA NEW ZEALAND FOOD STANDARDS CODE

Note: The following amendments are in a format that accords with the proposed amending Legislative Instrument which, in turn, has to be consistent with the existing format of Standard 1.4.2 (Maximum Residue Limits) of the *Australia New Zealand Food Standards Code*.

PROPOSED AMENDMENT NO. 110

Note: Subsection 82(2) of the *Food Standards Australia New Zealand Act 1991* provides that variations to standards are legislative instruments, but are not subject to disallowance or sunseting.

To commence: on gazettal of variation

Standard 1.4.2 of the *Australia New Zealand Food Standards Code* is varied by –

1. inserting in alphabetical order in Schedule 1, the foods and associated MRLs for each of the following chemicals –

Abamectin	
Sum of avermectin B1a, avermectin B1b and (Z)-8,9 avermectin B1a, and (Z)-8,9 avermectin B1b	
Adzuki bean (dry)	T*0.002
Common bean (dry)[navy bean]	T*0.002
Mung bean (dry)	T*0.002
Bifenthrin	
Bifenthrin	
Cabbages, Head	T7
Clodinafop acid	
(R)-2-[4-(5-chloro-3-fluoro-2-pyridinyloxy) phenoxy] propanoic acid	
Barley	T*0.02
Clodinafop-propargyl	
Clodinafop-propargyl	
Barley	T*0.02
Cyhalothrin	
Cyhalothrin, sum of isomers	
Coriander (leaves, stem, roots)	T1
Parsley	T1
Diquat	
Diquat cation	
Poppy seed	0.5
Pyrimethanil	
Pyrimethanil	
Cucumber	5

2. omitting from Schedule 1, under the entries for the following chemicals, the maximum residue limit for the food, substituting –

Amitrole Amitrole	
Hops, dry	*0.01
Bifenthrin Bifenthrin	
Brassica (cole or cabbage) vegetables, Head cabbages, Flower head brassicas [except Cabbages, Head]	T1
Cucumber	T0.5
Diquat Diquat cation	
Oilseed [except linseed and poppy seed]	5
Etoxazole Etoxazole	
Banana	0.2
Stone fruits [except cherries]	0.3
Isoxaben Isoxaben	
Hops, dry	*0.1
Pendimethalin Pendimethalin	
Hops, dry	*0.1

INVITATION FOR SUBMISSIONS

Written submissions are invited from interested individuals and organisations to assist the APVMA in considering the proposal to vary Standard 1.4.2 - Maximum Residue Limits of the *Australia New Zealand Food Standards Code*. Submissions should be strictly confined to relevant matters that the APVMA must consider (such as public health and safety) which are associated with the occurrence of the proposed residues in foods. Comments received outside these grounds will not be considered by the APVMA. Claims made in submissions should be supported wherever possible by referencing or including relevant studies, research findings, trials, surveys etc. Technical information should be in sufficient detail to allow independent scientific assessment.

Please note that FSANZ will make a SPS notification to the WTO and submissions related to impacts on international trade should be made to FSANZ in response to that notification.

All personal and *confidential commercial information* (CCI)² material contained in submissions to the APVMA will be treated confidentially.

Submissions must be made in writing and should be clearly marked as a 'submission on the proposed amendment to Standard 1.4.2' and quote the correct amendment number.

² A full definition of "confidential commercial information" is contained in the Agricultural and Veterinary Chemicals Code (Agvet Code), which is scheduled to the *Agricultural and Veterinary Chemicals Code Act 1994*.

DEADLINE FOR PUBLIC SUBMISSIONS: 6 pm (Canberra time) 5th June 2012

SUBMISSIONS RECEIVED AFTER THIS DEADLINE WILL ONLY BE CONSIDERED BY PRIOR ARRANGEMENT

Submissions received after this date will only be considered if agreement for an extension has been given prior to this closing date. Agreement to an extension of time will only be given if extraordinary circumstances warrant an extension to the submission period.

Application Summaries

The APVMA publishes complete application summaries on the APVMA website, www.apvma.gov.au.

They are published in weekly instalments using the date the application was accepted for assessment. If an application summary has been amended, the APVMA will publish the amended version on the website and list it separately in the APVMA Gazette Notice for Application Summaries.

As a requirement of Regulations 8C and E of the Agvet Code, some product names will appear as 'NOT AVAILABLE'.

A summary will be removed from the website 28 days after the application has been finalised. Therefore, some summaries published in this notice may have already been removed prior to the Gazette being published.
