NOTICE – NEW AGRICULTURAL ACTIVE CONSTITUENT

Flazasulfuron

The Australian Pesticides and Veterinary Medicines Authority (APVMA) has before it an application for the approval of a new active constituent, flazasulfuron for use in pre- and post- emergence control of grass and broad-leaved weeds and sedges in warm-season turf.

Common Name:	Flazasulfuron (ISO, AS approved)
IUPAC Name:	1-(4,6-Dimethoxypyrimidin-2-yl)-3-(3-trifluoromethyl-2-pyridylsulphonyl)urea
CAS Name:	N-[[4,6-dimethoxy-2-pyrimidinyl]amino]carbonyl]-3-(trifluoromethyl)- 2-pyridinesulfonamide
CAS Registry Number:	104040-78-0
Manufacturer's Code:	SL-160
Minimum Purity:	940 g/kg
Molecular Formula:	C ₁₃ H ₁₂ F ₃ N ₅ O ₅ S
Molecular Weight:	407.3

Structure:

Chemical Family:	Sulfonylurea herbicide
Mode of Action:	Systemic herbicide

SUMMARY OF THE APVMA'S EVALUATION OF FLAZASULFURON ACTIVE CONSTITUENT

The Pesticides Program of the APVMA has evaluated the chemistry aspects of flazasulfuron active constituent (manufacturing process, quality control procedures, batch analysis results and analytical methods) and found them to be acceptable.

On the basis of the data provided, and the toxicological assessment, it is proposed that the following APVMA Active Constituent Standard be established for flazasulfuron active constituent:

Constituent	Specification	Level
Flazasulfuron	Flazasulfuron	Not less than 940 g/kg

Other compounds of toxicological significance are not expected to occur in flazasulfuron Technical grade active constituent (TGAC) as a result of the raw materials and the synthetic route used.

The Office of Chemical Safety and Environmental Health has considered the toxicological aspects of flazasulfuron TGAC, and advised that there are no toxicological objections to the approval of this chemical.

An Acceptable Daily Intake (ADI) of 0.013 mg/kg bw/d has been recommended, based on a No-Observed Effect Level (NOEL) of 1.3 mg/kg bw/d in a 2-year dietary study, after applying a safety factor of 100.

No Acute Reference Dose (ARfD) has been set and based on flazasulfuron toxicological profile. No ARfD is required.

The National Drugs and Poisons Schedule Committee (NDPSC) has considered flazasulfuron to be appropriate for inclusion in Schedule 5 of the Standard for the Uniform Scheduling of Medicines and Poisons (SUSMP), and this scheduling decision is implemented on 1 January 2012.

The APVMA accepts the findings and recommendations of its advisers on these criteria.

The APVMA is satisfied that the proposed importation and use of flazasulfuron would not be an undue toxicological hazard to the safety of people exposed to it during its handling and use.

MAKING A SUBMISSION

In accordance with sections 12 of the Agvet Code, the APVMA invites any person to submit a relevant written submission as to whether the application for approval of flazasulfuron should be granted. NOTICE – NEW AGRICULTURAL ACTIVE CONSTITUENT**Proquinazid**

The Australian Pesticides and Veterinary Medicines Authority (APVMA) has before it an application for the approval of a new active constituent, proquinazid for use in grapevines for the control of powdery mildew.

PARTICULARS OF THE ACTIVE CONSTITUENT

Common Name:	Proquinazid
IUPAC Name:	6-Iodo-2-propoxy-3-propylquinazolin-4(3H)-one
CAS Name:	6-Iodo-2-propoxy-3-propyl-4(3H)-quinazolinone
CAS Registry Number:	189278-12-4
Manufacturer's Codes:	DPX-KQ926; IN-KQ926
Minimum Purity:	950 g/kg
Molecular Formula:	C ₁₄ H ₁₇ IN ₂ O ₂
Molecular Weight:	372.2

Structure:**Chemical Family:** Aryl phenyl ketone fungicides**SUMMARY OF THE APVMA'S EVALUATION OF PROQUINAZID ACTIVE CONSTITUENT**

The Pesticides Program of the APVMA has evaluated the chemistry aspects of active constituent proquinazid (manufacturing process, quality control procedures, batch analysis results and analytical methods) and found them to be acceptable. Proquinazid is a new active constituent and there are no compendial specifications available for proquinazid.

On the basis of the data provided it is proposed that the following minimum compositional standard be established for proquinazid:

Constituent	Specification	Level
Proquinazid	Brown, wax-like, crystalline solid	Minimum 950 g/kg

Other compounds of toxicological significance are not expected to occur in proquinazid as a result of the raw materials and the synthetic route used.

The Office of Chemical Safety (OCS) has completed a toxicological evaluation of proquinazid. An Acceptable Daily Intake (ADI) of 0.01 mg/kg body weight /day (bw/d) has been set, based on a No-Observed Effect Level (NOEL) of 1.2 mg/kg bw/d in a 2-year rat study, after applying a default safety factor of 100 to account for potential inter- and intra-species differences. An Acute Reference Dose (ARfD) of 0.2 mg/kg bw has been set based on a lowest observed adverse effect level (LOAEL) of 19 mg/kg bw/d in 90-day dietary study in dogs, after applying a default safety factor of

100 to account for potential inter- and intra-species differences, which is considered sufficient for the minor and largely transient effects seen. Based on the toxicity profile of proquinazid, the delegate to the Secretary of the Department of Health and Ageing final decision was that proquinazid be included in Schedule 6 of the SUSMP with an implementation date of 1 September 2011.

The OCS has considered the toxicological aspects of proquinazid, and advised that there are no objections on human health grounds to the approval of proquinazid.

The APVMA accepts the findings and recommendations of its advisors on these criteria.

MAKING A SUBMISSION

In accordance with sections 12 of the Agvet Code, the APVMA invites any person to submit a relevant written submission as to whether the application for approval of **proquinazid** should be granted. Submissions should relate only to matters that the APVMA is required by legislation to consider in deciding whether to grant the approval. These grounds include **chemistry and manufacture, and toxicity**. Submissions should state the grounds on which they are based. Comments received outside these grounds cannot be considered by the APVMA.

Submissions must be received by the APVMA within **28 days** of the date of this notice and be directed to the contact listed below. All submissions to the APVMA will be acknowledged in writing via email or by post.

When making a submission please include a:

- contact name
- company or group name (if relevant)
- postal address
- email address (if available)
- the date you made the submission.

All personal and **confidential commercial information (CCI)**² material contained in submissions will be treated confidentially.

NOTICE – NEW AGRICULTURAL CHEMICAL PRODUCTS**Proquinazid in the product DuPont Talendo® Fungicide**

The Australian Pesticides and Veterinary Medicines Authority (APVMA) has before it an application from DuPont (Australia) Ltd, for registration of a new product containing the active proquinazid. The product is **DUPONT TALENDO® FUNGICIDE**. The product is for use on grapes to control powdery mildew.

Proposed Product Name(s):	DuPont Talendo® Fungicide
Applicant Company:	DuPont (Australia) Ltd
Name of Active Constituent:	Proquinazid
Signal Heading:	Schedule 6
Summary of Proposed Use:	Control of powdery mildew in grapes
Pack Sizes:	1L, 2.5L, 5L
Withholding Period:	HARVEST WITHHOLDING PERIOD Grapes: DO NOT harvest for 28 days after application. GRAZING WITHHOLDING PERIOD Vineyards: DO NOT graze or cut for stock food.

SUMMARY OF THE APVMA'S EVALUATION OF DUPONT TALENDO® FUNGICIDE IN ACCORDANCE WITH SECTION 14(3)(E) AND (F) OF THE AGRICULTURAL AND VETERINARY CHEMICALS CODE (THE 'AGVET CODE'), SCHEDULED TO THE *AGRICULTURAL AND VETERINARY CHEMICALS CODE ACT 1994*

The APVMA has evaluated the application and in its assessment in relation to human and environmental safety under section 14(3)(e) of the Agvet Code, it proposes to determine that:

- (i) The APVMA is satisfied that the proposed use of **DUPONT TALENDO® FUNGICIDE** would not be an undue hazard to the safety of people exposed to it during its handling and use.

The Office of Chemical Safety (OCS) in the Department of Health and Ageing has conducted a risk assessment on the product and concluded that it can be used safely.

An occupational health and safety risk assessment for application to grapevines was conducted using default work rate values obtained for typical Australian application of fungicides to crops. The risk assessment revealed that there was an adequate margin of safety in the use of Dupont Talendo Fungicide whether the operator wears gloves or not. Therefore, provided the worker wears a single layer cotton overall, no further personal protection equipment (PPE) is required for potential repeat exposure effects when using Dupont Talendo Fungicide to control powdery mildew in grapevines. Appropriate PPE has been recommended for acute risks to protect workers from nose, throat, skin and eye irritation when preparing the spray. No re-entry or re-handling statement is required.

Based on an assessment of the toxicology, it was considered that there should be no adverse effects on human health from the use of Dupont Talendo Fungicide when used in accordance with the label directions.

- (ii) The APVMA is satisfied that the proposed use of **DUPONT TALENDO® FUNGICIDE** will not be an undue hazard to the safety of people using anything containing its residues.

The APVMA Residues section has evaluated the residues aspects of the proposed product and recommended amendments to the APVMA maximum residue limit (MRL) standard for proquinazid and for inclusion in the Food Standards Code. Recommendations in regard to the required withholding periods have been included on the label.

- (iii) The APVMA is satisfied that the proposed use of **DUPONT TALENDO® FUNGICIDE** containing the active constituent Proquinazid is not likely to be harmful to human beings if used according to the product label directions.

Proquinazid is a new fungicide to the Australian market. The product, Dupont Talendo Fungicide, contains 200 g/L of proquinazid. Dupont Talendo Fungicide is a new fungicidal product, which will be used for the control of powdery mildew in grapevines.

Following oral dosing in rats, proquinazid was virtually completely absorbed and was extensively metabolised. The elimination half-life was 8-12 hours. There was no significant sex differentiation for the disposition or elimination of radioactive residues. Dermal absorption studies indicated that absorption of proquinazid through the skin was limited.

Proquinazid was of low acute oral, dermal and inhalational toxicity in rats. It was a slight skin and eye irritant in rabbits but not a skin sensitiser in guinea pigs. The formulated product, containing 200 g/L proquinazid had low acute oral and dermal toxicity in rats. It was a severe skin and eye irritant in rabbits but not a skin sensitiser in guinea pigs. No acute inhalational toxicity study was submitted but it is considered that the product will have low acute inhalation toxicity. However, it is expected to be a respiratory irritant.

Proquinazid was neither a reproductive toxicant in rats nor a developmental toxicant in rats or rabbits. It was neither genotoxic nor neurotoxic.

Based on an assessment of the toxicology, it was considered that there should be no adverse effects on human health from the use of Dupont Talendo Fungicide when used in accordance with the label directions.

- (iv) The APVMA is satisfied that the proposed use of **DUPONT TALENDO® FUNGICIDE** is not likely to have an unintended effect that is harmful to animals, plants or the environment if used according to the product label directions.

The APVMA is satisfied that the proposed use of the new product, DuPont Talendo® Fungicide, containing the new active constituent, proquinazid, as a fungicide on grapes would not be likely to have an unintended effect that is harmful to animals, plants or things or to the environment.

The Department Sustainability, Environment, Water, Population and Communities has assessed data in support of the proposed use and has concluded that the risks to the environment from this use are acceptable.

Photolysis in water and on the soil surface, together with aerobic aquatic metabolism and aerobic soil degradation are expected to be the major routes of dissipation and breakdown of proquinazid in the environment. Proquinazid has a moderate potential for bioaccumulation in fish based on total residues of proquinazid and degradates, but is rapidly depurated.

Proquinazid is practically non-toxic to birds and mammals. It is highly toxic to fish, aquatic invertebrates, algae and aquatic plants, but very slightly toxic to bees and earthworms. At the proposed application rates it is not expected to harm insect and mite predator and parasite populations or terrestrial plants.

In considering the submitted data, DSEWPaC has given particular attention to the potential risk to soil and sediment organisms from accumulated residues of proquinazid or its major metabolites. The risk to aquatic and sediment-dwelling organisms is acceptable with the 15 m Downwind No-Spray Zone provided on the draft label. The risk assessment determined that the chemical is unlikely to pose an environmental risk under the proposed use pattern and with the proposed environmental protection statements on the draft label, provided some amendments are made to update the label to current requirements.

The APVMA has considered the findings of the Department Sustainability, Environment, Water, Population and Communities and accepts these conclusions.

- (v) The APVMA is considering whether the proposed use of **DUPONT TALENDO® FUNGICIDE** would not adversely affect trade between Australia and places outside Australia.
- (vi) In relation to its assessment of efficacy under section 14(3)(f), the APVMA is satisfied that data from trials supporting the efficacy of the product adequately demonstrate that if used according to the product label directions, the product is effective for its proposed uses.
