NOTICE – NEW AGRICULTURAL ACTIVE CONSTITUENT

Penthiopyrad

The Australian Pesticides and Veterinary Medicines Authority (APVMA) has before it an application for the approval of a new active constituent, penthiopyrad.

Penthiopyrad is a fungicide which shows broad antifungal activity on a wide range of crops. It inhibits mitochondrial function by disrupting complex II (succinate dehydrogenase) in the respiratory electron transport chain. Penthiopyrad is used to control a range of pathogens including: grey mould, powdery mildew, tomato leaf mould, cucumber corynespora leaf spot, rust, southern blight, apple and pear scab, apple blossom blight, peach and cherry brown rot. On cereals and turf, penthiopyrad also has high activity against wheat septoria diseases, rust, brown patch, dollar spot, fairy rings, anthracnose and snow mould.

Common Name:	Penthiopyrad
IUPAC Name:	(<i>RS</i>)- <i>N</i> -[2-(1,3-dimethylbutyl)-3-thienyl]-1-methyl-3-(trifluoromethyl)-1 <i>H</i> -pyrazole-4-carboxamide
CAS Name:	<i>N</i> -[2-(1,3-dimethylbutyl)-3-thienyl]-1-methyl-3-(trifluoromethyl)-1 <i>H</i> -pyrazole-4-carboxamide
CAS Registry Number:	183675-82-3
Manufacturer's Code:	MTF-753
Minimum Purity:	976 g/kg
Molecular Formula:	C ₁₆ H ₂₀ F ₃ N ₃ OS
Molecular Weight:	359.4

Structure:

Chemical Family:	Pyrazol Carboxamide
Mode of Action:	Fungicide

SUMMARY OF THE APVMA'S EVALUATION OF PENTHIOPYRAD ACTIVE CONSTITUENT

The Pesticides Program of the APVMA has evaluated the chemistry aspects of penthiopyrad active constituent (manufacturing process, quality control procedures, batch analysis results and analytical methods) and found them to be acceptable.

On the basis of the data provided, and the toxicological assessment, it is proposed that the following APVMA Active Constituent Standard be established for penthiopyrad active constituent:

Constituent	Specification	Level
Penthiopyrad	Penthiopyrad	Not less than 976 g/kg

Other compounds of toxicological significance are not expected to occur in penthiopyrad TGAC.

The Office of Chemical Safety (OCS) has completed a toxicological evaluation of penthiopyrad TGAC.

An Acceptable Daily Intake (ADI) of 0.1 mg/kg bw/d has been set, based on a No-Observed Effect Level (NOEL) of 11 mg/kg bw/d in a rat study, after applying a safety factor of 100. An Acute Reference Dose (ARfD) of 0.75 mg/kg bw has been set based on a rabbit developmental toxicity study, after applying a safety factor of 100.

The National Drugs and Poisons Schedule Committee (NDPSC) has considered penthiopyrad to be appropriate for inclusion in Schedule 5 of the Standard for the Uniform Scheduling of Medicines and Poisons (SUSMP) with a 20% cut-off exemption from poisons scheduling.

The OCS has indicated that there are no objections on toxicological grounds to the approval of the active constituent penthiopyrad TGAC.

The APVMA accepts the findings and recommendations of its advisers on these criteria.

The APVMA is satisfied that the proposed importation and use of penthiopyrad would not be an undue toxicological hazard to the safety of people exposed to it during its handling and use.

SUMMARY OF THE APVMA'S EVALUATION OF DUPONT FONTELIS FUNGICIDE IN ACCORDANCE WITH SECTION 14(3)(E) AND (F) OF THE AGRICULTURAL AND VETERINARY CHEMICALS CODE (THE 'AGVET CODE'), SCHEDULED TO THE *AGRICULTURAL AND VETERINARY CHEMICALS CODE ACT 1994*

The APVMA has evaluated the application and in its assessment in relation to human and environmental safety under section 14(3)(e) of the Agvet Code, it proposes to determine that:

- (i) The APVMA is satisfied that the proposed use of **DUPONT™ FONTELIS® FUNGICIDE** would not be an undue hazard to the safety of people exposed to it during its handling and use.

The Office of Chemical Safety and Environmental Health (OCSEH) in the Department of Health and Ageing has conducted a risk assessment on the product and concluded that it can be used safely.

The main occupational use of the product will be by farmers and their workers. Workers may be exposed to the product when opening containers, mixing/loading, application, and cleaning up spills and equipment. The main route of exposure to the product will be dermal with inhalation exposure from the spray also possible.

In the absence of exposure data for the proposed mode of application, the Pesticide Handler Exposure Database (PHED) Surrogate Exposure Guide was used to estimate exposure. Exposure to the product during mixing and loading and both ground boom and air-blast application were at an acceptable level when a single layer of clothing (cotton overalls or equivalent clothing) was worn with or without gloves.

Based on the risk assessment, a First Aid Instruction and Safety Directions have been recommended for the product label.

- (ii) The APVMA is satisfied that the proposed use of **DUPONT™ FONTELIS® FUNGICIDE** will not be an undue hazard to the safety of people using anything containing its residues.

The APVMA is satisfied that the proposed use of Dupont™ Fontelis® Fungicide will not be an undue hazard to the safety of people using anything containing its residues. The product will be used as a foliar spray in a wide range of fruit and vegetable crops, including strawberries, pome and stone fruit, tree nuts, leafy vegetables, bulb vegetables, cucurbits, brassicas, root vegetables, and non-cucurbitaceous fruiting vegetables. The APVMA Residues Section has evaluated the residues aspects of the proposed product and has recommended amendments to the APVMA MRL Standard for penthiopyrad and for inclusion in the Food Standards Code. Dietary exposure modelling has shown the expected chronic and acute dietary exposures to penthiopyrad are both below the relevant health standards. Recommendations regarding withholding periods and protection statements for livestock have been included on the label.

- (iii) The APVMA is satisfied that the proposed use of **DUPONT™ FONTELIS® FUNGICIDE** containing the active constituent penthiopyrad is not likely to be harmful to human beings if used according to the product label.

The submitted studies on the active constituent in rats showed that it is extensively and rapidly absorbed by the oral route (>83%) and excreted rapidly. The total absorbable dose *in vitro* for rat and human skin was 53% and 19% respectively. Penthiopyrad is of low acute oral, dermal and inhalational toxicity in rats. It was not a skin irritant in rabbits but was considered a slight eye irritant in the same species. It was not a skin sensitiser in guinea pigs. In repeat dose studies, liver toxicity was common in mice, rats and dogs, with thyroid toxicity also observed in mice and rats. There were findings of an increased incidence of thyroid follicular epithelial adenomas in male rats, and hepatocellular carcinomas in male mice. Overall, OCS considers that the weak induction of thyroid follicular epithelial adenomas in male rats occurred via thyroid hormone perturbations and that the observed tumours are of limited relevance to humans. Consequently, penthiopyrad is not considered to be a carcinogenic hazard to humans.

Penthiopyrad was not a reproductive or developmental toxicant, and tested negative *in vitro* and *in vivo* in a battery of mutagenicity and/or genotoxicity studies. Additionally, the available data was not considered to demonstrate a neurotoxic or immunotoxic potential.

The product DuPont™ Fontelis® Fungicide is of low acute oral, dermal and inhalational toxicity in rats. It is not a skin or eye irritant in rabbits nor a skin sensitiser in guinea pigs and mice.

Based on an assessment of the toxicology, it was considered that there should be no adverse effects on human health from the use of DuPont™ Fontelis® Fungicide when used in accordance with the label directions.

- (iv) The APVMA is satisfied that the proposed use of **DUPONT™ FONTELIS® FUNGICIDE** containing the new active constituent, penthiopyrad is not likely to have an unintended effect that is harmful to animals, plants or the environment if used according to the product label directions.

The Department of Sustainability, Environment, Water, Population and Communities has assessed data in support of the proposed use and has concluded that the risks to the environment from uses are acceptable provided that the draft label is updated to meet current requirements.

Penthiopyrad is stable with minimal or no detectable degradation by abiotic processes (photolysis and hydrolysis). It undergoes slow degradation by biotic processes in both soil and water under laboratory conditions. However, under field conditions it dissipates more rapidly. Finally, penthiopyrad does not bio-accumulate in fish.

Penthiopyrad and the SC formulation are not toxic to birds, bees, earthworms, non-target arthropods or plants and did not affect the short-term respiration and nitrogen turnover in a soil. They are considered toxic to very toxic to fish and aquatic invertebrates, and at worst toxic algae.

At the proposed rates, the major potential risk to the environment was penthiopyrad's potential to accumulate in the soil and the water compartment from multiple applications. With conservative modelling, acceptable risk to aquatic organisms was found from run-off water entering environmental waters. Similarly the risk to water and sediment dwelling organisms from spray drift was found to be acceptable if downwind no-spray zones are implemented. The risk assessment determined that the chemical is unlikely to pose an environmental risk under the proposed use patterns, provided the draft label is updated to meet current requirements.

The APVMA has considered the findings of the Department of Sustainability, Environment, Water, Population and Communities and accepts these conclusions.

- (v) The APVMA is considering whether the proposed use of **DUPONT™ FONTELIS® FUNGICIDE** would not adversely affect trade between Australia and places outside Australia.

Export of treated produce containing finite (measurable) residues of penthiopyrad may pose a risk to Australian trade in situations where (i) no residues tolerance (import tolerance) is established in the importing country or (ii) where residues in Australian product are likely to exceed a residue tolerance (import tolerance) established in the importing country.

The overall risk to export trade in animal commodities is considered to be low, as detectable residues of penthiopyrad are not expected in meat, milk, eggs or offal, and MRLs have been recommended at the limit of quantitation.

Detectable residues are expected in a number of commodities including tree nuts, strawberries, brassica vegetables, leafy vegetables, bulb vegetables, fruiting vegetables and root vegetables. However, none of these are significant export commodities, and the corresponding risk to trade is expected to be low.

Detectable residues are also expected in pome fruit and stone fruit, which are significant export commodities. Of the export markets for pome and stone fruit, Australian fruit are expected to meet the current or forthcoming standards of Canada, France and the UK, while New Zealand accepts Australian MRLs under the Trans-Tasman mutual recognition agreement. Other export markets such as Hong Kong, Thailand, Singapore, Indonesia and Papua New Guinea do not currently have either their own or Codex MRLs. There may therefore be some risk to exports to these destinations.

Comment is sought from the relevant industry groups on the perceived level of risk and whether any industry-initiated strategies are required to manage that risk.

- (vi) In relation to its assessment of efficacy under section 14(3)(f), the APVMA is satisfied that data from trials supporting the efficacy of the product adequately demonstrate that if used according to the product label directions, the product is effective for its proposed uses.

These grounds include **occupational health and safety, chemistry and manufacture, residues, safety and first aid, environmental fate and toxicity, trade and efficacy**. PARTICULARS OF THE APPLICATION

Proposed Product Name(s):	DEXDOMITOR INJECTABLE SEDATIVE AND ANALGESIC FOR DOGS AND CATS
Applicant Company:	Pfizer Animal Health, A division of Pfizer Australia Pty Ltd
Name of Active Constituent:	Dexmedetomidine hydrochloride

Signal Heading:	Prescription Animal Remedy - Schedule 4

SUMMARY OF THE APVMA'S EVALUATION OF DEXDOMITOR INJECTABLE SEDATIVE AND ANALGESIC FOR DOGS AND CATS IN ACCORDANCE WITH SECTION 14(3)(E) AND (F) OF THE AGRICULTURAL AND VETERINARY CHEMICALS CODE (THE 'AGVET CODE'), SCHEDULED TO THE *AGRICULTURAL AND VETERINARY CHEMICALS CODE ACT 1994*

The APVMA has evaluated the application and in its assessment in relation to human and environmental safety under section 14(3)(e) of the Agvet Code, it proposes to determine that:

- (vii) The APVMA is satisfied that the proposed use of **DEXDOMITOR INJECTABLE SEDATIVE AND ANALGESIC FOR DOGS AND CATS** would not be an undue hazard to the safety of people exposed to it during its handling and use.

The Office of Chemical Safety (OCS) in the Department of Health and Ageing has conducted a risk assessment on the product and concluded that it can be used safely.

Based on the findings of the toxicological studies evaluated, dexmedetomidine hydrochloride has high intravenous and subacute toxicity in mice, rats and dogs. It is unlikely to be a skin sensitizer. No studies on the skin and eye irritation potential of dexmedetomidine were submitted with this application, however, medetomidine, the racemic mixture of dexmedetomidine and levomedetomidine, was not a skin irritant or an eye irritant in guinea pigs or rabbits, respectively. There was no data available on acute oral or inhalational toxicity; however, based on the use pattern of the product, exposure via these routes is unlikely. The APVMA has considered and accepts the findings and recommendations of the OCS evaluation.

- (viii) The APVMA is satisfied that the proposed use of **DEXDOMITOR INJECTABLE SEDATIVE AND ANALGESIC FOR DOGS AND CATS** will not be an undue hazard to the safety of people using anything containing its residues.

The product is for use in companion animals (dogs and cats) only. Dexmedetomidine hydrochloride is unlikely to enter the food chain and therefore the determinations of an Acceptable Daily Intake (ADI) and Acute Reference Dose (ARfD) are not considered necessary.

- (ix) The APVMA is satisfied that the proposed use of **DEXDOMITOR INJECTABLE SEDATIVE AND ANALGESIC FOR DOGS AND CATS** containing the active constituent dexmedetomidine is not likely to be harmful to human beings if used according to the product label directions.

Dexmedetomidine is in schedule 4 of the SUSMP. Based on the toxicity profile of dexmedetomidine hydrochloride and the use pattern of the product; it is proposed that a schedule for classification for this product remains appropriate. The signal heading that corresponds to Schedule 4 and the First Aid instructions recommended by the OCS will appear on the product label.

- (x) The APVMA is satisfied that the proposed use of **DEXDOMITOR INJECTABLE SEDATIVE AND ANALGESIC FOR DOGS AND CATS** is not likely to have an unintended effect that is harmful to animals, plants or the environment if used according to the product label directions.

The Department of Sustainability, Environment, Water, Population and Communities (DSEWPAC), have recommended to the APVMA that the use of the product in the proposed manner is not expected to have an unintended effect that is harmful to the environment. The APVMA has considered these findings and accepts the recommendations of DSEWPAC on this criterion.

- (xi) The APVMA is satisfied that the proposed use of **DEXDOMITOR INJECTABLE SEDATIVE AND ANALGESIC FOR DOGS AND CATS** would not adversely affect trade between Australia and places outside Australia as the product is for use in dogs and cats, which are not food-producing animals and do not produce any major Australian export commodities.
- (xii) In relation to its assessment of efficacy under section 14(3)(f), the APVMA is satisfied that data from trials supporting the efficacy of the product adequately demonstrate that if used according to the product label directions, the product is effective for its proposed uses.

Variations to Standard 1.4.2 of the Australia New Zealand Food Standards Code

The APVMA has previously gazetted particular amendments which it had made to the APVMA *MRL Standard* and which have been proposed as variations to maximum residue limits (MRLs) for substances contained in agricultural and veterinary chemical products as set out as in Standard 1.4.2 – Maximum Residue Limits of the *Australia New Zealand Food Standards Code*. This notice pertains to proposal numbered 12O gazetted on 5 June 2012 (No. APVMA 11).

Submissions have been sought on these proposals and the APVMA has written separately to each person or organisation that made a submission. All matters raised in the submissions have been resolved.

Under subsection 82(1) of the *Food Standards Australia New Zealand Act 1991*, the APVMA has, by legislative instrument, incorporated these variations to MRLs into Standard 1.4.2. A copy of the Amendment Instrument (No. APVMA 8, 2012) accompanies this notice. For a complete and up-to-date version of Standard 1.4.2, including these amendments together with their Explanatory Statement, please refer to the Federal Register of Legislative Instrument available on the Comlaw website at <http://www.comlaw.gov.au>.

Based on dietary exposure assessments and current health standards, the APVMA and FSANZ are satisfied that these MRLs are not harmful to public health. MRLs contained in Standard 1.4.2 provide the limits for residues of agricultural and veterinary chemicals that may legitimately occur in foods. By this means, Standard 1.4.2 permits the sale of treated foods and protects public health by minimising residues in foods consistent with the effective control of pests and diseases.

The Agreement between the Government of Australia and the Government of New Zealand concerning a Joint Food Standards System, excludes MRLs for agricultural and veterinary chemicals in food from the system setting joint food standards. Australia and New Zealand independently and separately develop MRLs for agricultural and veterinary chemicals in food.

Food Standards Australia New Zealand (FSANZ) made Sanitary and Phytosanitary (SPS) notification to the World Trade Organization (WTO) in relation to these variations and no comment was received in response to that notice.

A copy of these variations have been given to FSANZ.

The variations take effect as from the date of this notice.

This notice is published in accordance with subsection 82(7) of the *Food Standards Australia New Zealand Act 1991*.
