GENERAL INFORMATION

The *APVMA (Australian Pesticides and Veterinary Medicines Authority) Gazette* is published fortnightly and contains details of the registration of agricultural and veterinary chemicals products and other approvals granted by the APVMA, notices as required by the Agricultural and Veterinary Chemicals Code (the Agvet Code) and related legislation and a range of regulatory material issued by the APVMA.

Pursuant to section 53(1) of the Agvet Code, the APVMA has decided that it is unnecessary to publish details of applications made for the purpose of notifying minor variations to registration details. The APVMA will however report notifications activity in quarterly statistical reports.

NOTICE—NEW AGRICULTURAL ACTIVE CONSTITUENT

Ametoctradin

The Australian Pesticides and Veterinary Medicines Authority (APVMA) has before it an application for the approval of a new active constituent, Ametoctradin.

Ametoctradin is a new fungicidal active ingredient, belonging to the triazolopyrimidylamine class of compounds. Ametoctradin is a strong inhibitor of mitochondrial respiration in complex III (cytochrome bc1) of fungi belonging to the class oomycetes and has a new unique mode of action.

Common Name:	Ametoctradin
IUPAC Name:	5-ethyl-6-octyl[1,2,4]triazolo[1,5-a]pyrimidin-7-amine
CAS Name:	[1,2,4]triazolo[1,5-a]pyrimidin-7-amine, 5-ethyl-6-octyl-
CAS Registry Number:	865318-97-4
Manufacturer's Code:	BAS 650F
Minimum Purity:	980 g/kg
Molecular Formula:	C ₁₅ H ₂₅ N ₅
Molecular Weight:	275.4

Structure:

Chemical Family:	Triazolopyrimidylamine
Mode of Action:	Fungicide

SUMMARY OF THE APVMA'S EVALUATION OF AMETOCTRADIN ACTIVE CONSTITUENT

The Pesticides Program of the APVMA has evaluated the chemistry aspects of Ametoctradin active constituent (manufacturing process, quality control procedures, batch analysis results and analytical methods) and found them to be acceptable.

On the basis of the data provided, and the toxicological assessment, it is proposed that the following APVMA Active Constituent Standard be established for Ametoctradin active constituent:

Constituent	Specification	Level
Ametoctradin	Ametoctradin	Not less than 980 g/kg

Other compounds of toxicological significance are not expected to occur in Ametoctradin Technical Grade Active Constituent (TGAC).

The Office of Chemical Safety (OCS) has completed a toxicological evaluation of Ametoctradin TGAC.

An Acceptable Daily Intake (ADI) of 10 mg/kg bw/d has been set based on the overall lack of adverse toxicological effects of ametoctradin across the repeat-dose toxicology dataset at close to or above the limit-dose of 1000 mg/kg bw/d, and using a 100-fold safety factor. An Acute Reference Dose (ARfD) is not proposed, as ametoctradin was considered unlikely to present an acute hazard to humans after single dose administration. OCS has recommended that ametoctradin be listed in Appendix B of the Standard for the Uniform Scheduling of Medicines and Poisons (SUSMP); that is ametoctradin be exempt from poisons scheduling due to its low toxicity.

On 18 October 2011, the Advisory Committee on Chemicals Scheduling (ACCS) have considered ametoctradin to be appropriate for inclusion as new Appendix B entry of the SUSMP.

The OCS has not specified or recommended any impurity as toxicologically significant.

The OCS has recommended that there are no objections on toxicological grounds to the approval of the active constituent ametoctradin.

The APVMA accepts the findings and recommendations of its advisers on these criteria.

The APVMA is satisfied that the proposed importation and use of Ametoctradin would not be an undue toxicological hazard to the safety of people exposed to it during its handling and use.

MAKING A SUBMISSION

In accordance with sections 12 of the Agvet Code, the APVMA invites any person to submit a relevant written submission as to whether the application for approval of Ametoctradin should be granted. The Adverse Experience Reporting Program (AERP) for Pesticides and Veterinary Medicines: Request for Annual Summaries (Periodic Summary Updates)

Product registrants are reminded that, in accordance with the Guidelines for the Adverse Experience Reporting Program for veterinary medicines (AERP Vet) and pesticides (AERP Ag), they are requested to provide the APVMA with their annual summary (July 2011–June 2012) of all suspected adverse experiences related to registered products in their product range marketed in Australia. This summary should be submitted by close of business 31 October 2012.

To prepare an annual Periodic Summary Update (PSU), the following links and forms can be used:

VETERINARY CHEMICAL PRODUCTS:

Guidelines: www.apvma.gov.au/forms/docs/KP81_G01.pdf

Form: www.apvma.gov.au/forms/docs/KP83-F05.doc

AGRICULTURAL CHEMICAL PRODUCTS:

Guidelines: www.apvma.gov.au/forms/docs/KP82_G02.pdf

Form: www.apvma.gov.au/forms/docs/KP83-F04.doc

Registrants are requested to ensure the summary includes the APVMA reference number (where provided), if an adverse experience being included in the PSU was already reported to the APVMA during the year and the APVMA has provided a reference number for the report. This will help avoid redundancy and duplication, and augment the accuracy of record keeping.

Along with a hard copy of the PSU, product registrants are encouraged to consider submission of an editable electronic version of their PSU. This may enable faster processing and reduce the administrative workload associated with migration of information into the AERP database.

Amendments to the APVMA MRL Standard

The Australian Pesticides and Veterinary Medicines Authority (APVMA) approves maximum residue limits (MRLs) of agricultural and veterinary chemicals in agricultural produce, particularly produce entering the food chain. The MRLs approved by the APVMA are associated with a regulatory decision to register a product, grant a permit approval, or as an outcome from a review decision and are set out in the *MRL Standard* published by the APVMA. The *MRL Standard* lists MRLs of substances that may arise from the approved use of agricultural and veterinary chemical products containing those substances on commodities used for human consumption as well as livestock feeds. The *MRL Standard* also provides the relevant residue definitions to which these MRLs apply. There may be situations where the residue definition for monitoring and enforcement is different to the definition used for dietary risk assessment purposes.

MRLs are set at levels which are not likely to be exceeded if the agricultural or veterinary chemicals are used in accordance with approved label instructions. In considering MRLs and variation to MRLs, the APVMA takes into account studies on chemistry, metabolism, analytical methodology, residues, toxicology, good agricultural practice and dietary exposure. In approving MRLs, the APVMA is satisfied, from dietary exposure assessment, that the levels set are not an undue hazard to human health.

The *MRL Standard* is accessible via the APVMA website www.apvma.gov.au.

The APVMA has varied the *MRL Standard* as set out below with effect from the date of this notice.

‘T’ denotes that the MRL, residue definition or use is temporary to enable further experimental work to be carried out in Australia or overseas, and will be reconsidered at some future date.

Proposal to Amend Standard 1.4.2 of the Australia New Zealand Food Standards Code

In the previous notice, the APVMA gazetted particular amendments which it has approved varying maximum residue limits (MRLs) for substances contained in agricultural and veterinary chemical products as set out as in the APVMA's *MRL Standard*.

Under Section 82 of the *Food Standards Australia New Zealand Act 1991* the APVMA is proposing to incorporate these variations (numbered 4P) to MRLs into Standard 1.4.2–Maximum Residue Limits of the Australia New Zealand Food Standards Code.

MRLs contained in Standard 1.4.2 provide the limits for residues of agricultural and veterinary chemicals that may legitimately occur in foods. By this means, Standard 1.4.2 permits the sale of treated foods and protects public health and safety by minimising residues in foods consistent with the effective control of pests and diseases.

The APVMA and FSANZ are satisfied, based on dietary exposure assessments and current health standards, that the proposed limits are not harmful to public health.

The Agreement between the Government of Australia and the Government of New Zealand concerning a Joint Food Standards System, excludes MRLs for agricultural and veterinary chemicals in food from the system setting joint food standards. Australia and New Zealand independently and separately develop MRLs for agricultural and veterinary chemicals in food.

Food Standards Australia New Zealand (FSANZ) will make a Sanitary and Phytosanitary (SPS) notification to the World Trade Organization (WTO).

The APVMA invites comment on these proposals. Details on how to make a submission appear near the end of this notice, below the details of the proposed amendment.

The APVMA will consider any public comments made in response to this proposal. If the APVMA decides to proceed with the proposal, it will further notify any variations it makes to Standard 1.4.2 in the APVMA *Gazette*. The variations will take effect as from the date of that subsequent notice.

DRAFT VARIATIONS TO THE AUSTRALIA NEW ZEALAND FOOD STANDARDS CODE

Note: The following amendments are in a format that accords with the proposed amending Legislative Instrument which, in turn, has to be consistent with the existing format of Standard 1.4.2 (Maximum Residue Limits) of the *Australia New Zealand Food Standards Code*.

PROPOSED AMENDMENT NO. 4P

Note: Subsection 82(2) of the *Food Standards Australia New Zealand Act 1991* provides that variations to standards are legislative instruments, but are not subject to disallowance or sunseting.

To commence: on gazettal of variation

Standard 1.4.2 of the *Australia New Zealand Food Standards Code* is varied by –

INVITATION FOR SUBMISSIONS

Written submissions are invited from interested individuals and organisations to assist the APVMA in considering the proposal to vary Standard 1.4.2–Maximum Residue Limits of the *Australia New Zealand Food Standards Code*. Submissions should be strictly confined to relevant matters that the APVMA must consider (such as public health and safety) which are associated with the occurrence of the proposed residues in foods. Comments received outside these grounds will not be considered by the APVMA. Claims made in submissions should be supported wherever possible by referencing or including relevant studies, research findings, trials, surveys etc. Technical information should be in sufficient detail to allow independent scientific assessment.

Please note that FSANZ will make a SPS notification to the WTO and submissions related to impacts on international trade should be made to FSANZ in response to that notification.

All personal and *confidential commercial information* (CCI)² material contained in submissions to the APVMA will be treated confidentially.

Submissions must be made in writing and should be clearly marked as a 'submission on the proposed amendment to Standard 1.4.2' and quote the correct amendment number.

DEADLINE FOR PUBLIC SUBMISSIONS: 6 pm (Canberra time) 6 November 2012

SUBMISSIONS RECEIVED AFTER THIS DEADLINE WILL ONLY BE CONSIDERED BY PRIOR ARRANGEMENT

Submissions received after this date will only be considered if agreement for an extension has been given prior to this closing date. Agreement to an extension of time will only be given if extraordinary circumstances warrant an extension to the submission period.
