OTHER NOTICES

Reconsideration of Approvals and Registrations Related to Diuron

The APVMA, in accordance with Part 2, Division 4, of the Agvet Codes, has reconsidered all approvals of the registrations of selected products containing diuron and the approvals of all associated product labels.

Diuron is a broad-spectrum residual herbicide used in agriculture for pre- and post-emergent control of broadleaf and grass weeds.

The APVMA commenced its review of products containing diuron in 2002 due to concerns about the potential impact of diuron on the environment and to human health. Of particular concern was the impact of diuron use on aquatic ecosystems, including the Great Barrier Reef.

As at 7 November 2011 there were 62 remaining products containing diuron that were under review.

Following the finalisation of its reconsideration of diuron the APVMA has varied the relevant particulars of label approval for the labels listed in Table 1 in accordance with the outcomes contained in the Diuron Final Review Report (November 2012). The APVMA is satisfied that continued registration of the products in Table 1, in accordance with their instructions for use as included in those new label approvals in Column E:

- would not be likely to have an unintended effect that is harmful to animals, plants or things or to the environment, and
- would not be likely to have an effect that is harmful to human beings.

The APVMA affirmed the registrations of these products effective 28 November 2012. The APVMA also cancelled the approvals of all previously-approved product labels (column F) as they did not contain adequate instructions.

As an outcome of the review, the registrations of certain products containing diuron, and their associated label approvals, as listed in Table 2, have been cancelled. The approved labels of these particular products have no remaining uses left following implementation of the review findings. The APVMA therefore cannot be satisfied that these labels can be varied and as a result, the product labels and registrations have been cancelled under s.40(1).

The APVMA has issued instructions for the possession, supply and use of cancelled product or registered product bearing a varied or cancelled label until **28 November 2013** as noted below. These are also provided in a s.114 permit issued by the APVMA (PER13874).

INSTRUCTIONS FOR USE OF DIURON PRODUCTS BEARING A VARIED OR CANCELLED LABEL

These instructions apply to the use of products containing diuron that have had their registration cancelled (Table 2) or that are registered but have had label approvals cancelled or varied (Table 1, Columns D & F) until **28 November 2013**.

READ THESE INSTRUCTIONS before using or otherwise handling the product.

When using or otherwise handling the product, follow the instructions of the current label except as follows:

PROHIBITED USES

The existing (cancelled or varied) label may include instructions for use in situations listed below. The use of diuron is no longer approved for these situations and the following restraints apply:

- DO NOT USE around agricultural buildings
- DO NOT USE on right-of-way areas
- DO NOT USE on driveways, paths, lanes, drains, ditches, fence lines, car parks, tennis courts
- DO NOT USE in non-crop areas

RESTRICTED CROP USES

The existing (cancelled or varied) label may include instructions for use in situations listed below. The following restraints apply:

- DO NOT USE in banana, coffee, paw paws, pineapples, sugarcane or tea between 1 December 2012 and 31 March 2013
- DO NOT USE in factory sites, commercial and industrial areas UNLESS the area is adequately banded to retain any runoff
- DO NOT USE in irrigation channels or drainage ditches UNLESS ALL irrigation tailwater and rainfall can be captured and held on farm
- TREE CROPS: Apply under trees only as a directed band spray over a maximum of 50% of the area

DIRECTIONS FOR USE

These directions for use must be used in conjunction with existing label directions and the restraint statements. Where the instructions in this notice are inconsistent with the label instructions, the instructions in this notice must be followed.

Restraints (All Crops):

- DO NOT apply more than 1.8 kilograms of diuron active per hectare in any 12 month period (refer to rate conversions provided below).
- DO NOT apply by air
- DO NOT use in water-logged areas
- DO NOT apply if greater than 50 mm rain fall is expected within 3 days of application
- DO NOT irrigate within 3 days of application
- DO NOT apply to fields where the slope exceeds 3%
- DO NOT replant treated areas within 2 years of application of diuron except when otherwise stated on label
- DO NOT apply within 20m of a down slope water body, unless a minimum 5m wide effective vegetated treatment area (EVTA) between the edge of the down slope water body and any points where low flow runoff exits the inter-row furrows of the crop
- DO NOT apply when there is non-target terrestrial vegetation within 130m downwind from the application area
- Apply as a COARSE spray only
- DO NOT spot spray greater than 5% of total farm area

These instructions apply to the following situations in which diuron can be used:

| CROPS | |
|---|--|
| Apples and pears (established at least 1 year) | Continued use in accordance with current label rates but no more than 1.8 kilograms of diuron active per ha in any 12 month period |

Amendments to the APVMA MRL Standard

The Australian Pesticides and Veterinary Medicines Authority (APVMA) approves maximum residue limits (MRLs) of agricultural and veterinary chemicals in agricultural produce, particularly produce entering the food chain. The MRLs approved by the APVMA are associated with a regulatory decision to register a product, grant a permit approval, or as an outcome from a review decision and are set out in the *MRL Standard* published by the APVMA. The *MRL Standard* lists MRLs of substances that may arise from the approved use of agricultural and veterinary chemical products containing those substances on commodities used for human consumption as well as livestock feeds. The *MRL Standard* also provides the relevant residue definitions to which these MRLs apply. There may be situations where the residue definition for monitoring and enforcement is different to the definition used for dietary risk assessment purposes.

MRLs are set at levels which are not likely to be exceeded if the agricultural or veterinary chemicals are used in accordance with approved label instructions. In considering MRLs and variation to MRLs, the APVMA takes into account studies on chemistry, metabolism, analytical methodology, residues, toxicology, good agricultural practice and dietary exposure. In approving MRLs, the APVMA is satisfied, from dietary exposure assessment, that the levels set are not an undue hazard to human health.

The *MRL Standard* is currently accessible via the APVMA website www.apvma.gov.au.

The APVMA has varied the *MRL Standard* as set out below with effect from the date of this notice.

This will be the last variation made to the *MRL Standard* by notice in the APVMA *Gazette*. It is being proposed that from 1 January 2013, the *MRL Standard* will become a legislative instrument made under the *Legislative Instruments Act 2003*. The APVMA has determined that the *MRL Standard* meets the definition in that Act of a legislative instrument.

The authoritative version of the *MRL Standard* will be on the Australia Government ComLaw website at www.comlaw.gov.au. The ComLaw website contains documents in HTML, Word and PDF format. The APVMA website will provide a link to the latest compilation of the APVMA's *MRL Standard* as well as amendments made to that compilation. The APVMA will also continue to issue a notice of these amendments in the APVMA *Gazette*. However, the date of effect of the amendments will be the date the Amendment Legislative Instrument is registered on the Federal Register of Legislative Instruments rather than the date of gazettal by the APVMA. Because of these changes, it is also proposed that no amendments to the *MRL Standard* will be made in January. The next amendments will be in February 2013.

AMENDMENT No. 6P, 2012

Note: ‘**’ denotes that the maximum residue limit (MRL) has been set at or about the limit of analytical quantitation (see: Residue Guideline No.4, *Maximum Residue Limit Proposals ‘At or about the Limit of Analytical Quantitation’*, published in NRA Gazette No.9, p44, 5/9/95).

‘T’ denotes that the MRL, residue definition or use is temporary to enable further experimental work to be carried out in Australia or overseas, and will be reconsidered at some future date.

Proposal to Amend Standard 1.4.2 of the Australia New Zealand Food Standards Code

In the previous notice, the APVMA gazetted particular amendments which it has approved varying maximum residue limits (MRLs) for substances contained in agricultural and veterinary chemical products as set out as in the APVMA's *MRL Standard*.

Under Section 82 of the *Food Standards Australia New Zealand Act 1991* the APVMA is proposing to incorporate these variations (numbered 6P) to MRLs into Standard 1.4.2 – Maximum Residue Limits of the Australia New Zealand Food Standards Code.

MRLs contained in Standard 1.4.2 provide the limits for residues of agricultural and veterinary chemicals that may legitimately occur in foods. By this means, Standard 1.4.2 permits the sale of treated foods and protects public health and safety by minimising residues in foods consistent with the effective control of pests and diseases.

The APVMA and FSANZ are satisfied, based on dietary exposure assessments and current health standards, that the proposed limits are not harmful to public health.

The Agreement between the Government of Australia and the Government of New Zealand concerning a Joint Food Standards System, excludes MRLs for agricultural and veterinary chemicals in food from the system setting joint food standards. Australia and New Zealand independently and separately develop MRLs for agricultural and veterinary chemicals in food.

Food Standards Australia New Zealand (FSANZ) will make a Sanitary and Phytosanitary (SPS) notification to the World Trade Organization (WTO).

The APVMA invites comment on these proposals. Details on how to make a submission appear near the end of this notice, below the details of the proposed amendment.

The APVMA will consider any public comments made in response to this proposal. If the APVMA decides to proceed with the proposal, it will further notify any variations it makes to Standard 1.4.2 in the APVMA *Gazette*. The variations will take effect as from the date of that subsequent notice.

DRAFT VARIATIONS TO THE AUSTRALIA NEW ZEALAND FOOD STANDARDS CODE

Note: The following amendments are in a format that accords with the proposed amending Legislative Instrument which, in turn, has to be consistent with the existing format of Standard 1.4.2 (Maximum Residue Limits) of the *Australia New Zealand Food Standards Code*.

PROPOSED AMENDMENT NO. 6P

Note: Subsection 82(2) of the *Food Standards Australia New Zealand Act 1991* provides that variations to standards are legislative instruments, but are not subject to disallowance or sunseting.

INVITATION FOR SUBMISSIONS

Written submissions are invited from interested individuals and organisations to assist the APVMA in considering the proposal to vary Standard 1.4.2 - Maximum Residue Limits of the *Australia New Zealand Food Standards Code*. Submissions should be strictly confined to relevant matters that the APVMA must consider (such as public health and safety) which are associated with the occurrence of the proposed residues in foods. Comments received outside these grounds will not be considered by the APVMA. Claims made in submissions should be supported wherever possible by referencing or including relevant studies, research findings, trials, surveys etc. Technical information should be in sufficient detail to allow independent scientific assessment.

Please note that FSANZ will make a SPS notification to the WTO and submissions related to impacts on international trade should be made to FSANZ in response to that notification.

All personal and *confidential commercial information* (CCI)¹ material contained in submissions to the APVMA will be treated confidentially.

Submissions must be made in writing and should be clearly marked as a 'submission on the proposed amendment to Standard 1.4.2' and quote the correct amendment number.

¹ A full definition of "confidential commercial information" is contained in the Agricultural and Veterinary Chemicals Code (Agvet Code), which is scheduled to the *Agricultural and Veterinary Chemicals Code Act 1994*.

DEADLINE FOR PUBLIC SUBMISSIONS: 6 pm (Canberra time) 9 January 2013

SUBMISSIONS RECEIVED AFTER THIS DEADLINE WILL ONLY BE CONSIDERED BY PRIOR ARRANGEMENT

Submissions received after this date will only be considered if agreement for an extension has been given prior to this closing date. Agreement to an extension of time will only be given if extraordinary circumstances warrant an extension to the submission period.

Variations to Standard 1.4.2 of the Australia New Zealand Food Standards Code

The APVMA has previously gazetted particular amendments which it had made to the APVMA *MRL Standard* and which have been proposed as variations to maximum residue limits (MRLs) for substances contained in agricultural and veterinary chemical products as set out as in Standard 1.4.2 – Maximum Residue Limits of the *Australia New Zealand Food Standards Code*. This notice pertains to proposal (numbered 3P) gazetted on 11 September 2012 (No. APVMA 18).

Submissions have been sought on these proposals and the APVMA has written separately to each person or organisation that made a submission. All matters raised in the submissions have been resolved.

Under subsection 82(1) of the *Food Standards Australia New Zealand Act 1991*, the APVMA has, by legislative instrument, incorporated these variations to MRLs into Standard 1.4.2. A copy of the Amendment Instrument (No. APVMA 11, 2012) accompanies this notice. For a complete and up-to-date version of Standard 1.4.2, including these amendments together with their Explanatory Statement, please refer to the Federal Register of Legislative Instrument available on the ComLaw website at <http://www.comlaw.gov.au>.

Based on dietary exposure assessments and current health standards, the APVMA and FSANZ are satisfied that these MRLs are not harmful to public health. MRLs contained in Standard 1.4.2 provide the limits for residues of agricultural and veterinary chemicals that may legitimately occur in foods. By this means, Standard 1.4.2 permits the sale of treated foods and protects public health by minimising residues in foods consistent with the effective control of pests and diseases.

The Agreement between the Government of Australia and the Government of New Zealand concerning a Joint Food Standards System, excludes MRLs for agricultural and veterinary chemicals in food from the system setting joint food standards. Australia and New Zealand independently and separately develop MRLs for agricultural and veterinary chemicals in food.

Food Standards Australia New Zealand (FSANZ) made Sanitary and Phytosanitary (SPS) notification to the World Trade Organization (WTO) in relation to these variations and no comment was received in response to that notice.

A copy of these variations have been given to FSANZ.

The variations take effect as from the date of this notice.

This notice is published in accordance with subsection 82(7) of the *Food Standards Australia New Zealand Act 1991*.
