The *Agricultural and Veterinary Chemical Code Act 1994* (the Act) commenced on 15 March 1995. The Agricultural and Veterinary Chemicals Code (the Agvet Code) scheduled to the Act requires notices to be published in the *Gazette* containing details of the registration of agricultural and veterinary chemical products and other approvals granted by the Australian Pesticides and Veterinary Medicines Authority. The Agvet Code and related legislation also requires certain other notices to be published in the *Gazette*. A reference to Agvet Codes in this publication is a reference to the Agvet Code in each state and territory jurisdiction.

GENERAL INFORMATION

The *APVMA (Australian Pesticides and Veterinary Medicines Authority) Gazette* is published fortnightly and contains details of the registration of agricultural and veterinary chemicals products and other approvals granted by the APVMA, notices as required by the Agricultural and Veterinary Chemicals Code (the Agvet Code) and related legislation and a range of regulatory material issued by the APVMA.

Pursuant to section 53(1) of the Agvet Code, the APVMA has decided that it is unnecessary to publish details of applications made for the purpose of notifying minor variations to registration details. The APVMA will however report notifications activity in quarterly statistical reports.

DISTRIBUTION AND SUBSCRIPTION

The *APVMA Gazette* is published in electronic format only and is available from the APVMA website, www.apvma.gov.au/publications/gazette/.

If you would like to receive email notification when a new edition is published, please subscribe on the APVMA website.

NOTICE – NEW AGRICULTURAL CHEMICAL PRODUCTS

312 g/Kg metofluthrin in the product Off! Clip-On Mosquito Repellent

The Australian Pesticides and Veterinary Medicines Authority (APVMA) has before it an application from S.C. Johnson & Son PTY LTD for registration of a new product containing the active constituent metofluthrin. The product is Off! Clip-On Mosquito Repellent. The product is for use as a personal insect repellent.

PARTICULARS OF THE APPLICATION

Proposed Product Name(s):	OFF! CLIP-ON MOSQUITO REPELLENT
Applicant Company:	S.C. Johnson & Son PTY LTD
Name of Active Constituent:	Metofluthrin
Signal Heading:	Schedule 6
Summary of Proposed Use:	Liquid vaporizer for use as a personal insect repellent
Pack Sizes:	46mg; 92mg
Withholding Period:	Not applicable

SUMMARY OF THE APVMA'S EVALUATION OF OFF! CLIP-ON MOSQUITO REPELLENT IN ACCORDANCE WITH SECTION 14(3)(E) AND (F) OF THE AGRICULTURAL AND VETERINARY CHEMICALS CODE (THE 'AGVET CODE'), SCHEDULED TO THE *AGRICULTURAL AND VETERINARY CHEMICALS CODE ACT 1994*

The APVMA has evaluated the application and in its assessment in relation to human and environmental safety under section 14(3)(e) of the Agvet Code, it proposes to determine that:

- (i) The APVMA is satisfied that the proposed use of **OFF! CLIP-ON MOSQUITO REPELLENT** would not be an undue hazard to the safety of people exposed to it during its handling and use.

The Office of Chemical Safety (OCS) in the Department of Health and Ageing has conducted a risk assessment on the product and concluded that it can be used safely.

Metofluthrin is a synthetic pyrethroid insecticide. This class of chemicals act on the nervous system of insects, disturbing the function of neurons by interacting with sodium channels. The product, Off! Clip-on Mosquito Repellent containing metofluthrin at 322.6 g/L is a battery powered vaporizer device intended to be used as a personal insect repellent for the control of flying insects. There are no proposed agricultural uses for metofluthrin.

The submitted studies on the active constituent in rats showed that following single and repeat-dose oral administration of metofluthrin, absorption was rapid (detectable plasma residues within 30 min, T_{max} 3-7 h) and thorough (up to ~80%). At 168 h post dosing, urinary and faecal excretion accounted for 10-26% and 30-56% of the total administered dose, respectively. Absorbed metofluthrin was nearly completely metabolised, with some unchanged metofluthrin detected in faeces, presumably representing unabsorbed compound. The highest level of metofluthrin was found in the liver following single and repeat-dose administration and accumulation of radiocarbon in the tissues was low. Thirty-three metabolites were identified, none of which were toxicologically significant. An *in vivo* dermal absorption study in male rats indicated that metofluthrin is moderately absorbed through the skin.

Metofluthrin was found to be of low acute toxicity via the oral and dermal routes and of moderate toxicity via the inhalational route in rats. Metofluthrin caused slight skin irritation, but was not an eye irritant, in rabbits. There is no evidence of skin sensitisation potential for metofluthrin, as determined in guinea pigs.

Repeat-dose studies on metofluthrin indicated that the liver is the main target organ in rodents. Liver effects common to most repeat-dose studies included: increased liver weight, incidence of dark and enlarged livers, hepatocellular hypertrophy and biochemical changes. Other systemic effects noted in mice, rats, rabbits and dogs following exposure to metofluthrin were decreased bodyweight and bodyweight gain, decreased food consumption and symptoms of neurotoxicity, which is expected for pyrethroid insecticides.

Metofluthrin was not mutagenic or genotoxic *in vitro*, or genotoxic *in vivo*. Metofluthrin was found to be carcinogenic in the liver in a long term study in rats, but was not carcinogenic in a long term study in mice. However, it is considered that metofluthrin induced liver tumours in the rat via a mode of action that is similar to phenobarbital and is not relevant to humans.

In rats, metofluthrin did not affect reproductive performance or the reproductive system. Metofluthrin was not a developmental toxicant in rats or rabbits.

The applicant indicated that the toxicity of the end-use product is the same as that of the active constituent and did not provide a separate dossier for the acute toxicity studies of the product.

The OCS considered the formulation of the proposed product, and agreed that because metofluthrin will be dispersed directly onto an inert substrate during manufacturing of the product without any additional formulation steps, the acute toxicity will be the same as that of metofluthrin TGAC. Therefore, for the purposes of this risk assessment, the acute toxicity of the active constituent (OCS 2009) has been used as a surrogate for the toxicity of the proposed end-use product.

Based on the findings of the toxicological studies evaluated, the product Off! Clip-on Mosquito Repellent has low acute oral and dermal toxicity and moderate inhalational toxicity in rats. It is not an eye irritant in rabbits but a slight skin irritant in the same species, and was not a skin sensitiser in guinea pigs.

The APVMA has considered and accepts the findings and recommendations of the OCS evaluation.

- (ii) The APVMA is satisfied that the proposed use of **OFF! CLIP-ON MOSQUITO REPELLENT** will not be an undue hazard to the safety of people using anything containing its residues. The product will not be applied to crops or animals destined for consumption by humans.
- (iii) The APVMA is satisfied that the proposed use of **OFF! CLIP-ON MOSQUITO REPELLENT** containing the active constituent metofluthrin is not likely to be harmful to human beings if used according to the product label directions.

The product will be used domestically. The most likely route of human exposure to the product is inhalational, with the possibility of dermal exposure. Further exposure to skin may also occur while changing the refill to the device. The applicant considers that the duration of exposure of domestic users is the duration of the device's working life. Therefore, the product could potentially be used throughout the year.

Exposure data and a risk assessment were provided by the applicant that allowed the daily exposure to be determined. Exposure to the product during its use was determined to be at an acceptable level. No personal protective equipment is required during use of the product.

Based on an assessment of the toxicology and occupational health and safety, it was considered that there should be no adverse effects on human health from the use of Off! Clip-on Mosquito Repellent when used in accordance with the label directions.

The active constituent has been evaluated and approved and the product is Schedule 6. The appropriate Signal Heading is on the label. First Aid Instructions and Safety Directions for metofluthrin, as recommended by the OCS have been included on the label.

- (iv) The APVMA is satisfied that the proposed use of **OFF! CLIP-ON MOSQUITO REPELLENT** is not likely to have an unintended effect that is harmful to animals, plants or the environment if used according to the product label directions. The product is designed to be used as a personal insect repellent so little exposure to the environment is expected.
- (v) The APVMA is satisfied that the proposed use of **OFF! CLIP-ON MOSQUITO REPELLENT** would not adversely affect trade between Australia and places outside Australia as the product is not for use in crops or animals producing any major Australian export commodities.
- (vi) In relation to its assessment of efficacy under section 14(3)(f), the APVMA is satisfied that data from trials supporting the efficacy of the product adequately demonstrate that if used according to the product label directions, the product is effective for its proposed uses.

MAKING A SUBMISSION

In accordance with sections 12 and 13 of the Agvet Code, the APVMA invites any person to submit a relevant written submission as to whether the application for registration of **OFF! CLIP-ON MOSQUITO REPELLENT** should be granted. Submissions should relate only to matters that the APVMA is required by legislation to take into account in deciding whether to grant the application. These grounds include **occupational health and safety, chemistry and manufacture, residues, safety and first aid, environmental fate and toxicity, trade and efficacy**. Submissions should state the grounds on which they are based. Comments received outside these grounds cannot be considered by the APVMA.

Submissions must be received by the APVMA within **28 days** of the date of this notice and be directed to the contact listed below. All submissions to the APVMA will be acknowledged in writing via email or by post.

Relevant comments will be taken into account by the APVMA in deciding whether the product should be registered and in determining appropriate conditions of registration and product labelling.

When making a submission please include:

- Contact name
- Company or Group name (if relevant)
- Email or postal address
- The date you made the submission.

All personal and **confidential commercial information (CCI)**¹ material contained in submissions will be treated confidentially.

Written submissions on the APVMA's proposal to grant the application for registration that relate to the **grounds for registration** should be addressed in writing to:

¹ A full definition of 'confidential commercial information' is contained in the [Agvet Code](#).

OTHER NOTICES

Variations to Standard 1.4.2 of the *Australia New Zealand Food Standards Code*

The APVMA has previously gazetted particular amendments which it had made to the APVMA *MRL Standard* and which have been proposed as variations to maximum residue limits (MRLs) for substances contained in agricultural and veterinary chemical products as set out as in Standard 1.4.2 – Maximum Residue Limits of the *Australia New Zealand Food Standards Code*. This notice pertains to proposals (numbered 5P) gazetted on 6th November 2012 (APVMA 22).

Submissions have been sought on these proposals and the APVMA has written separately to each person or organisation that made a submission. All matters raised in the submissions have been resolved.

Under subsection 82(1) of the *Food Standards Australia New Zealand Act 1991*, the APVMA has, by legislative instrument, incorporated these variations to MRLs into Standard 1.4.2. A copy of the Amendment Instrument (No. APVMA 1, 2013) accompanies this notice. For a complete and up-to-date version of Standard 1.4.2, including these amendments together with their Explanatory Statement, please refer to the Federal Register of Legislative Instrument available on the Comlaw website at <http://www.comlaw.gov.au>.

Based on dietary exposure assessments and current health standards, the APVMA and FSANZ are satisfied that these MRLs are not harmful to public health. MRLs contained in Standard 1.4.2 provide the limits for residues of agricultural and veterinary chemicals that may legitimately occur in foods. By this means, Standard 1.4.2 permits the sale of treated foods and protects public health by minimising residues in foods consistent with the effective control of pests and diseases.

The Agreement between the Government of Australia and the Government of New Zealand concerning a Joint Food Standards System, excludes MRLs for agricultural and veterinary chemicals in food from the system setting joint food standards. Australia and New Zealand independently and separately develop MRLs for agricultural and veterinary chemicals in food.

Food Standards Australia New Zealand (FSANZ) made Sanitary and Phytosanitary (SPS) notification to the World Trade Organization (WTO) in relation to these variations. Separate consultations are continuing in response to this notice.

A copy of these variations have been given to FSANZ.

The variations take effect as from the date of this notice.

This notice is published in accordance with subsection 82(7) of the *Food Standards Australia New Zealand Act 1991*.

Australia New Zealand
Food Standards Code —
Standard 1.4.2 — Maximum Residue Limits
Amendment Instrument No. APVMA 1, 2013

I, Rajumati Bhula, Program Manager, Pesticides Program and delegate of the Australian Pesticides and Veterinary Medicines Authority, acting in accordance with my powers under subsection 11(1) of the *Agricultural and Veterinary Chemicals (Administration) Act 1992*, make this instrument for the purposes of subsection 82(1) of the *Food Standards Australia New Zealand Act 1991*.

Rajumati Bhula
Program Manager
Pesticides Program

Dated this eleventh day of January 2013

Part 1 Preliminary

1 Name of Instrument

This Instrument is the *Australia New Zealand Food Standards Code — Standard 1.4.2 — Maximum Residue Limits Amendment Instrument* No. APVMA 1, 2013.

2 Commencement

Pursuant to subsection 82(8) of the *Food Standards Australia New Zealand Act 1991*, this Amendment Instrument commences on the day a copy of it is published in the *Gazette*.

Note: A copy of the variations made by the Amendment Instrument was published in the Commonwealth of Australia *Agricultural and Veterinary Chemicals Gazette* No. APVMA 1 of 15th January 2013.

3 Object

The object of this Instrument is for the APVMA to make variations to Standard 1.4.2 — Maximum Residue Limits of the *Australia New Zealand Food Standards Code* to include or change maximum residue limits pertaining to agricultural and veterinary chemical products.

4 Interpretation

In this Instrument: —

APVMA means the Australian Pesticides and Veterinary Medicines Authority established by section 6 of the *Agricultural and Veterinary Chemicals (Administration) Act 1992*; and

Principal Instrument means Standard 1.4.2 — Maximum Residue Limits of the *Australia New Zealand Food Standard Code* as defined in Section 4 of the *Food Standards Australia New Zealand Act 1991* being the code published in *Gazette* No. P 27 on 27 August 1987 together with any amendments of the standards in that code. The whole of the *Australia New Zealand Food Standard Code* (including Standard 1.4.2) was further published in *Gazette* P 30 of 20 December 2000².

Part 2 Variations to Standard 1.4.2 — Maximum Residue Limits

5 Variations to Standard 1.4.2

The Schedule to this Instrument sets out the variations made to the Principal Instrument by this Amendment Instrument.

² Note An amendment history from 20 December 2000 appears at the beginning of the *Australia New Zealand Food Standard Code*.

Schedule

Variations to Standard 1.4.2 — Maximum Residue Limits

1 Variations

(1) The Principal Instrument is varied by:

(a) omitting from Schedule 1 the foods and associated MRLs for each of the following chemicals –

Glyphosate	
Sum of glyphosate and Aminomethylphosphonic acid (AMPA) metabolite, expressed as glyphosate	
Oilseed [except cotton seed; linseed; rape seed (canola); sunflower seed]	T*0.1

(b) inserting in alphabetical order in Schedule 1, the foods and associated MRLs for each of the following chemicals –

Glyphosate	
Sum of glyphosate and Aminomethylphosphonic acid (AMPA) metabolite, expressed as glyphosate	
Oilseed [except cotton seed; peanut; poppy seed; linseed; rape seed (canola); sunflower seed]	T*0.1
Poppy seed	T20
Imidacloprid	
Sum of imidacloprid and metabolites containing the 6-chloropyridinylmethylene moiety, expressed as imidacloprid	
Blueberries	T0.1
Hops, dry	T10
Methoxyfenozide	
Methoxyfenozide	
Almonds	T0.2
Spinetoram	
Sum of Ethyl-spinosyn-J and Ethyl-spinosyn-L	
Rape seed (canola)	*0.01

(c) omitting from Schedule 1, under the entries for the following chemicals, the maximum residue limit for the food, substituting –

Glufosinate and Glufosinate-ammonium	
Sum of glufosinate-ammonium, N-acetyl glufosinate and 3-[hydroxy(methyl)-phosphinoyl] propionic acid, expressed as glufosinate (free acid)	
Hops, dry	T1

Iprodione Iprodione	
Egg plant	T1
Spinetoram Sum of Ethyl-spinosyn-J and Ethyl-spinosyn-L	
Milk fats	0.03

Addendum to the Record of Approved Active Constituents

The current *Record of Approved Active Constituents for Registered Chemical Products* is also accessible from the APVMA website, www.apvma.gov.au

Application Summaries

The APVMA publishes complete application summaries on the APVMA website, www.apvma.gov.au. They are published in weekly instalments using the date the application was accepted for assessment. If an application summary has been amended, the APVMA will publish the amended version on the website and list it separately in the APVMA Gazette Notice for Application Summaries.

As a requirement of Regulations 8C and E of the Agvet Code, some product names will appear as 'NOT AVAILABLE'.

A summary will be removed from the website 28 days after the application has been finalised. Therefore, some summaries published in this notice may have already been removed prior to the Gazette being published.
