NOTICE – NEW AGRICULTURAL ACTIVE CONSTITUENT

Ethanedinitrile

The Australian Pesticides and Veterinary Medicines Authority (APVMA) has before it an application for the approval of a new active constituent, ethanedinitrile, for use as a fumigant.

PARTICULARS OF THE ACTIVE CONSTITUENT

IUPAC Name:	Ethanedinitrile
CAS Name:	Cyanogen
CAS Registry Number:	460-19-5
Minimum Purity:	860 g/kg
Molecular Formula:	C ₂ N ₂
Molecular Weight:	52.04
Structure:	N≡C–C≡N
Chemical Family:	Nitrile

SUMMARY OF THE APVMA'S EVALUATION OF ETHANEDINITRILE ACTIVE CONSTITUENT

The Chemistry Section of the APVMA has evaluated the chemistry aspects of active constituent ethanedinitrile (manufacturing process, quality control procedures, batch analysis results and analytical methods) and found them to be acceptable. Ethanedinitrile is a new active constituent.

On the basis of the data provided it is proposed that the following minimum compositional standard be established for ethanedinitrile:

Constituent	Specification	Level
Ethanedinitrile	Colourless gas	Minimum 860 g/kg
Hydrogen cyanide	Colourless liquid	Maximum 50 g/kg

A maximum water content of 0.1 g/kg has been determined in the assessment of the active constituent. Water reacts with the active constituent ethanedinitrile to form hydrogen cyanide; the variation in the content of both ethanedinitrile and hydrogen cyanide is water dependant.

Other compounds of toxicological significance are not expected to occur in ethanedinitrile as a result of the raw materials and the synthetic route used.

The Office of Chemical Safety (OCS) of the Department of Health and Ageing has considered the toxicological aspects of ethanedinitrile, and advised that there are no objections on human health grounds to the approval of ethanedinitrile.

The OCS has not set an ADI or ARfD for ethanedinitrile or cyanide, the main food residue and moiety of toxicological concern, resulting from ethanedinitrile residue ingestion, mainly because its use for grain treatment is not supported and residues in soil are likely to be negligible at the time of crop planting. The Joint FAO/WHO Expert Committee on Food Additives (JECFA) has recently established a provisional maximum tolerated daily intake (PMTDI) of 0.02 mg/kg bw/d and ARfD of 0.09 mg/kg bw/d for cyanide (JECFA 2011), in a review of dietary exposure to ethanedinitrile glycosides in food products. These values have been adopted by FSANZ.

Ethanedinitrile is listed (as ethanedinitrile) in Schedule 7 and in Appendix J (condition 1 – not to be available except to authorised or licensed persons) of the SUSMP. This listing is consistent with its toxicological profile and the existing Schedule 7 inclusion of cyanides and hydrocyanic acid.

The APVMA accepts the findings and recommendations of its advisors on these criteria.

MAKING A SUBMISSION

In accordance with sections 12 of the Agvet Code, the APVMA invites any person to submit a relevant written submission as to whether the application for approval of **ethanedinitrile** should be granted. Submissions should relate only to matters that the APVMA is required by legislation to consider in deciding whether to grant the approval. These grounds include **chemistry and manufacture, and toxicity**. Submissions should state the grounds on which they are based. Comments received outside these grounds cannot be considered by the APVMA.

Submissions must be received by the APVMA within **28 days** of the date of this notice and be directed to the contact listed below. All submissions to the APVMA will be acknowledged in writing via email or by post.

When making a submission please include a:

- contact name
- company or group name (if relevant)
- postal address
- email address (if available)
- the date you made the submission.

All personal and **confidential commercial information (CCI)**¹ material contained in submissions will be treated confidentially.

Written submissions on the APVMA's proposal to grant approval for ethanedinitrile that relate to the **grounds for approval** should be addressed in writing to:

SUMMARY OF THE APVMA'S EVALUATION OF VIDALTA 15 MG TABLETS FOR CATS AND VIDALTA 10 MG TABLETS FOR CATS IN ACCORDANCE WITH SECTION 14(3)(E) AND (F) OF THE AGRICULTURAL AND VETERINARY CHEMICALS CODE (THE 'AGVET CODE'), SCHEDULED TO THE *AGRICULTURAL AND VETERINARY CHEMICALS CODE ACT 1994*

The APVMA has evaluated the application and in its assessment in relation to human and environmental safety under section 14(3)(e) of the Agvet Code, it proposes to determine that:

- (i) The APVMA is satisfied that the proposed use of **VIDALTA 15 MG TABLETS FOR CATS** and **VIDALTA 10 MG TABLETS FOR CATS** would not be an undue hazard to the safety of people exposed to them during their handling and use.

The Office of Chemical Safety (OCS), formerly known as The Office of Chemical Safety and Environmental Health, in the Department of Health and Ageing has conducted a risk assessment on the product and concluded that it can be used safely.

Based on the data submitted, it is estimated from the product ingredients that the products have low acute oral, dermal and inhalation toxicity, and are not a skin or eye irritant or a skin sensitizer. Chronic toxicity studies in rats and mice indicate that the thyroid gland is the primary target organ. No reliable evidence of a genotoxic potential for methimazole has been seen *in vitro* or *in vivo* from the limited data. Developmental toxicity and developmental neurotoxicity have been observed in animal studies following administration of methimazole over the gestation and/or lactation period. Additionally, developmental toxicity was seen in a child from a hyperthyroid patient who received methimazole during pregnancy. No standard reproductive toxicity or neurotoxicity studies in experimental animals are available. Based on these findings the OCS has recommended first aid instructions, safety directions and general precautions and warnings that are to be included on the product labeling. The APVMA has considered and accepted the findings and recommendations of the OCS evaluation.

- (ii) The APVMA is satisfied that the proposed use of **VIDALTA 15 MG TABLETS FOR CATS** and **VIDALTA 10 MG TABLETS FOR CATS** will not be an undue hazard to the safety of people using anything containing their residues.

The product is for use on companion animals only. Carbimazole is unlikely to enter the food chain and therefore the determinations of an Acceptable Daily Intake (ADI) and Acute Reference Dose (ARfD) are not considered necessary.

- (iii) The APVMA is satisfied that the proposed use of **VIDALTA 15 MG TABLETS FOR CATS** and **VIDALTA 10 MG TABLETS FOR CATS** containing the active constituent carbimazole is not likely to be harmful to human beings if used according to the product label directions.

Carbimazole is already included in Schedule 4 of the Standard for the Uniform Scheduling of Medicines and Poisons (SUSMP). The delegate to the Secretary of the Department of Health and Ageing noted that carbimazole's current scheduling as a prescription-only medicine remains appropriate, covering both human and animal clinical uses. Therefore, the Secretary's delegate recommended that carbimazole remain in Schedule 4 of the SUSMP with no cut-off. The signal heading appropriate to Schedule 4 and the first aid instructions, safety directions and general precautions and warnings recommended by the OCS will appear on the product label.

- (iv) The APVMA is satisfied that the proposed use of **VIDALTA 15 MG TABLETS FOR CATS** and **VIDALTA 10 MG TABLETS FOR CATS** is not likely to have an unintended effect that is harmful to animals, plants or the environment if used according to the product label directions.

The Department of Sustainability, Environment, Water, Population and Communities (DSEWPaC) have recommended to the APVMA that the use of the product in the proposed manner is not expected to have an unintended effect that is harmful to animals, plants, things or the environment. The APVMA has considered these findings and accepts the recommendations of DSEWPaC.

The APVMA has assessed the safety of the proposed products to target animals based on data submitted to it by the applicant. The potential developmental toxicity and neurotoxicity risk associated with the use of the proposed product in pregnant animals will be mitigated by a label statement precluding use in pregnant or lactating queens. The APVMA is satisfied that the proposed product would not have an unintended effect that is harmful to animals.

- (v) The APVMA is satisfied that the proposed use of **VIDALTA 15 MG TABLETS FOR CATS** and **VIDALTA 10 MG TABLETS FOR CATS** would not adversely affect trade between Australia and places outside Australia as the product is for use in cats, which are not food-producing animals nor do they produce any major Australian export commodities.

- (vi) In relation to its assessment of efficacy under section 14(3)(f), the APVMA is satisfied that data from trials supporting the efficacy of the product adequately demonstrate that if used according to the product label directions, the product is effective for its proposed uses.

ADDITIONAL INSTRUCTIONS

Buffer zones

Use only Coarse to Very Coarse spray quality according to ASAE S572 definition for standard nozzles, and a buffer zone of 100 m between field edges and downwind water bodies, native vegetation and sensitive crops.

Permissible Dates of Application of 2,4-D High Volatile Esters

Application of 2,4-D ethyl ester, butyl ester or isobutyl ester must only take place during a spray window between **1 May and 31 August**.

Victoria, Western Australia, Tasmania and Queensland currently have mechanisms whereby the use of specific chemicals (including 2,4-D) is restricted to geographical areas and/or time zones due to the higher risk for adverse off-target crop or environmental effects. These state restrictions on 2,4-D use may place additional requirements on users within this spray window between 1 May and 31 August, for example, length of the spray window and spray equipment. Users must consult their local authority or department of agriculture to ensure they meet state requirements.

Application of 2,4-D only within this spray window will minimise the risk of unintended harmful effects to native vegetation and susceptible crops. Avoid spraying upwind of nearby susceptible crops.

RECORD KEEPING REQUIREMENTS

Within 24 hours of completing a 2,4-D ethyl, butyl or isobutyl ester application all users **must** make and keep a record of each application. The details required in a 2,4-D ester spray record must contain at least the information set out below. It is the recommended and considered good practice, that the grower collect from any person acting on his or her behalf a copy of the 2,4-D ester spray record. (For convenience, a 2,4-D record-keeping form can be obtained from the Australian Pesticides and Veterinary Medicines Authority website.)
