**2. VETERINARY PRODUCTS BASED
ON NEW ACTIVE CONSTITUENTS:**

Product Name: NV Transam Injection
Active Constituent/s: 200 mg/mL dimethyl sulfone
Applicant Name: Nature Vet Pty Limited
Applicant ACN: 002 692 426
Summary of Use: An intravenous injection containing sulfur to be used by or under the direction of a registered veterinarian in horses with selected musculo-skeletal disorders.
Date of Registration: 2 January 2007
Label Approval No: 59545/100ML/0107

**3. VETERINARY PRODUCTS BASED
ON EXISTING ACTIVE
CONSTITUENTS:**

Product Name: Summerland Serums' Multi-Brown Snake Antivenom
Active Constituent/s: 1500 units brown snake antivenom
Applicant Name: K.J, J.A And J.M Curtin T/A Summerland Serums
Summary of Use: To treat animals that are suffering from the neurotoxic effects of envenomation by the three species of Brown Snake most commonly found in Australia – Common Brown Snake (*Pseudonaja textilis*), the Western Brown Snake (*P nuchalis*), and the Dugite (*P affinis*).

Date of Registration: 27 November 2006
Label Approval No: 56843/10/0906

Product Name: Summerland Serums' Tiger/Multi-Brown Snake Antivenom
Active Constituent/s: 4000 units brown snake antivenom, 3000 units tiger snake antivenom.
Applicant Name: K.J, J.A And J.M Curtin T/A Summerland Serums
Summary of Use: To treat animals that are suffering from the neurotoxic effects of envenomation by either the Tiger Snake (*Notechis scutatus*) or one of three species of Brown Snake most commonly found in Australia – the Common Brown Snake (*Pseudonaja textilis*), the Western Brown Snake (*P nuchalis*), and the Dugite (*P affinis*). It also neutralises the effects of the Black Snakes (*Pseudechis species*), including the Mulga or King Brown Snake (*Pseudechis australis*) and the Red-bellied Black Snake (*Pseudechis porphyriacus*), as well as the Copperhead Snake (*Austrelaps superbus*), the Rough Scaled or Clarence River Snake (*Tropidechis carinatus*), the Small-Eyed Snake (*Cryptophis nigresens*), and the Whip Snake (*Demansia species*), and the Tasmanian and Chappell Island Black Tiger Snakes (*Notechis ater*).

Date of Registration: 27 November 2006
Label Approval No: 56767/20/0906

Product Name: Lethapharm Euthanasia Injection
Active Constituent/s: 200 mg/mL pentobarbitone sodium
Applicant Name: Bomac Animal Health Pty Limited
Applicant ACN: 084 248 206
Summary of Use: Euthanasia solution for cats and dogs.
Date of Registration: 5 December 2006
Label Approval No: 59941/100mL/1206, 59941/500mL/1206

Product Name: IVX Clindamycin Hydrochloride Oral Solution
Active Constituent/s: 25 mg/mL clindamycin as clindamycin hydrochloride
Applicant Name: IVX Animal Health Inc
Summary of Use: For the treatment of infected wounds, abscesses, dental infections and osteomyelitis in dogs and cats caused by aerobic and anaerobic bacteria susceptible to clindamycin.
Date of Registration: 5 December 2006
Label Approval No: 60039/20mL/0606

Product Name: IVX Oxytocin 20 IU/mL Injection
Active Constituent/s: 20 IU/mL oxytocin.

Applicant Name: IVX Animal Health Inc
Summary of Use: For obstetrical use in domestic animals and mild letdown in cows and sows.
Date of Registration: 6 December 2006
Label Approval No: 59012/100ML/0606, 59012/0606

Product Name: Biomin C-Ex
Active Constituent/s: Stabilised lactic acid bacteria of enterococcus faecium strain Biomin IMB 52 1×10^{13} CFU/kg
Applicant Name: Biomin (Australia) Pty Ltd
Applicant ACN: 102 287 570
Summary of Use: An aid in the establishment of gastrointestinal microflora of day old poultry chicks.
Date of Registration: 6 December 2006
Label Approval No: 59446/300/1106, 59446/600/1106

Product Name: Coopers Tasvax 5in1 Vaccine For Sheep, Cattle And Goats Plus Selenium For Lambs
Active Constituent/s: 0.5 g/L selenium as sodium selenate, Meets Ph.Eur. *clostridium chauvoei* toxoid and inactivated cells, 3.5 U/mL *clostridium novyi* Type B toxoid and inactivated cells, 5.0 U/mL *clostridium perfringens* Type D toxoid, 2.5 U/mL *clostridium septicum* toxoid, 2.5 U/mL *clostridium tetani* toxoid
Applicant Name: Schering-Plough Pty Limited
Applicant ACN: 000 235 245
Summary of Use: For use in cattle, sheep and goats against Pulpy Kidney, Blackleg, Malignant Oedema, Black Disease and Tetanus and to protect against selenium deficiency in lambs.
Date of Registration: 7 December 2006
Label Approval No: 61165/500/0906, 61165/0906

Product Name: Noromectin Plus
Broad spectrum Antiparasitic Injection For Cattle
Active Constituent/s: 100 mg/mL clorsulon, 10 mg/mL ivermectin
Applicant Name: Norbrook Laboratories Australia Pty Limited
Applicant ACN: 080 972 596
Summary of Use: For the treatment and control of gastrointestinal roundworms, lungworms, eyeworms and adult liver flukes.
Date of Registration: 12 December 2006
Label Approval No: 60795/50mL/1006, 60795/100mL/1006, 60795/250mL/1006, 60795/500mL/1006, 60795/1L/1006, 60795/1006

Product Name: Calcium Syrup
Active Constituent/s: 24.25 g/100mL calcium lactobionate, 10.39 g/100mL calcium gluconate

Applicant Name: Novartis Animal Health Australasia Pty Limited
Applicant ACN: 076 745 198
Summary of Use: A dietary supplement for the treatment of calcium deficiency in dogs and cats.
Date of Registration: 21 December 2006
Label Approval No: 61111/200mL/1106, 61111/1L/1106

Product Name: Flopak VB12
Active Constituent/s: 28g/L calcium as calcium borogluconate, 0.02g/L vitamin b12 = cyanocobalamin.
Applicant Name: Bomac Animal Health Pty Limited
Applicant ACN: 084 248 206
Summary of Use: For the treatment of milk fever in cattle.
Date of Registration: 9 January 2007
Label Approval No: 61443/500mL/1206

Product Name: Value Plus Prevent Tying-Up Powder
Active Constituent/s: 90g Calcium (present as calcium carbonate), 95g Chloride (present as potassium chloride), 105g Potassium (present as potassium chloride), 91g Magnesium (present as magnesium oxide), 7mg Selenium (present as sodium selenite), 180mg Riboflavin, 1.4g Thiamine nitrate, 7.1g Alpha-tocopheryl acetate (Vitamin E).
Applicant Name: Value Plus Animal Health Care Products Pty Ltd
Applicant ACN: 094 221 913
Summary of Use: Oral mineral and vitamin powder for use in horses to aid in the prevention of 'tying-up'.
Date of Registration: 15 January 2007
Label Approval No: 60318/2kg/1106, 60318/4kg/1106, 60318/10kg/1106

Product Name: Ilium Pentobarbitone Sodium Anaesthetic Injection
Active Constituent/s: 60 mg/mL pentobarbitone sodium
Applicant Name: Troy Laboratories Pty Ltd
Applicant ACN: 000 283 769
Summary of Use: For intravenous use as a general anaesthetic in dogs, cats, horses, cows, pigs and sheep.
Date of Registration: 16 January 2007
Label Approval No: 61108/100MLP(1206), 61108/100MLG(1206), 61108/(1206)

Product Name: Vet's Choice Ivermectin Pour On For Cattle
Active Constituent/s: 10 mg/mL ivermectin.
Applicant Name: Bomac Animal Health Pty Limited
Applicant ACN: 084 248 206

Summary of Use: For the treatment and control of ivermectin-sensitive internal and external parasites of beef and cattle.

Date of Registration: 18 January 2007

Label Approval No: 61297/500mL/1206, 61297/2.5L/1206, 61297/10L/1206

Product Name: Troy Applyte Rehydration Solution For Horses

Active Constituent/s: 260 g/L glucose, 23.17 g/L phosphate as sodium phosphate dodecahydrate, 63.96 g/L chloride as sodium chloride and potassium chloride, 30.36 g/L potassium as potassium chloride, 2.93 g/L magnesium as magnesium sulfate heptahydrate, 11.59 g/L sulphate as magnesium sulphate heptahydrate, 40.45 g/L sodium as sodium chloride and sodium phosphate dodecahydrate

Applicant Name: Troy Laboratories Pty Ltd

Applicant ACN: 000 283 769

Summary of Use: Registration of an oral electrolyte rehydration solution for horses containing sodium, potassium, magnesium, chloride, sulphate, phosphate and glucose.

Date of Registration: 18 January 2007

Label Approval No: 61017/1L/1206, 61017/5L/1206

NOTICE

florasulam

in the product: *TORPEDO HERBICIDE*

The Australian Pesticides and Veterinary Medicines Authority (APVMA) has before it an application from Dow AgroSciences Australia Ltd for the registration of a new product containing the active constituent florasulam in combination with another currently approved active clopyralid. The product, *TORPEDO HERBICIDE*, is for the residual broadleaf weed control in winter cereal crops.

In accordance with sections 12 and 13 of the Agvet Code, the APVMA invites any person to submit a relevant written submission as to whether the application for registration should be granted. Submissions should state the grounds on which they are based. Such grounds should relate only to matters outlined below that the APVMA is required to take into account in deciding whether to grant the application. Comments must be received by the APVMA within 28 days of the date of this notice.

Particulars of Application

Proposed Product Name:	TORPEDO HERBICIDE
Applicant Company:	Dow AgroSciences Australia Ltd.
Active Constituents:	Florasulam and Clopyralid
Poisons Sheduling:	Schedule 5
Statement of Claims:	For the control of broadleaf weeds in barley triticale and wheat
Pack sizes:	5L, 10L, 20L
Withholding Period:	Barley, wheat and triticale: Harvest: Not required when used as directed. Grazing: Do not graze or cut treated crops for stock feed for 7 days after application.

Summary of the APVMA's evaluation of *TORPEDO HERBICIDE* in accordance with Section 14(3)(e) and (f) of the Agricultural and Veterinary Chemicals Code (the 'Agvet Code'), scheduled to the Agricultural and Veterinary Chemicals Code Act 1994

The APVMA has evaluated the application and in its assessment in relation to human and environmental safety under section 14(3)(e) of the Agvet Code, it proposes to determine that:

- (i) The APVMA is satisfied that the proposed use of *TORPEDO HERBICIDE* would not be an undue hazard to the safety of people exposed to it during its handling and use.

The Department of Health and Ageing, Office of Chemical Safety (Occupational Health and Safety) [OCS (OHS)] section has conducted a risk assessment on *TORPEDO HERBICIDE* and having set the appropriate personal protective equipment (PPE) requirements concluded that it can be used safely when used in accordance with the prescribed safety directions.

Florasulam has displayed low acute oral, dermal and inhalational toxicity in mice, rats and rabbits and is a slight skin and eye irritant in rabbits, but not a skin sensitiser in guinea pigs.

The product, *TORPEDO HERBICIDE*, was considered likely to exhibit low acute oral, dermal and inhalational toxicity but likely to be a moderate skin and eye irritant; it is not likely to cause skin-sensitisation.

The APVMA having considered the findings and recommendations of the OCS (OHS) evaluation accepts these findings and recommendations.

- (ii) The APVMA is satisfied that the proposed use of *TORPEDO HERBICIDE* will not be an undue hazard to the safety of people using anything containing its residues. Residue data were assessed by the APVMA and Maximum Residue Limits (MRLs) and associated Withholding Periods (WHPs) are recommended for *TORPEDO HERBICIDE* when used on barley, triticale and wheat.

The recommended WHPs for *TORPEDO HERBICIDE* are stated on the draft label. Florasulam MRLs are recommended for cereal grains (*0.01mg/kg), edible offal (mammalian) (*0.01mg/kg), eggs (*0.01mg/kg), meat (mammalian) (*0.01mg/kg), milks (*0.01mg/kg), poultry meat (*0.01mg/kg), poultry, edible offal of (*0.01mg/kg). The relevant MRLs for the currently approved active chlorpyralid are already established.

* denotes that the MRL was set at the limit of quantitation (LOQ).

- (iii) The APVMA is satisfied that the proposed use of *TORPEDO HERBICIDE* is not likely to be harmful to human beings if used according to the product label directions.

The proposed product has been assessed by the National Drugs and Poisons Scheduling Committee and has been included in Schedule 5 of the SUSDP. The appropriate Signal Heading appears on the label. First Aid and Safety Directions (hazard statements) for florasulam and *TORPEDO HERBICIDE* have been recommended by the Commonwealth Department of Health and Ageing, OCS (toxicology) section, and have been included on the label.

The product will be formulated overseas and imported ready to use in HDPE containers. *TORPEDO HERBICIDE* is determined to be a hazardous substance, based on NOHSC hazard classification of active and non-active constituents and product toxicology information provided.

The APVMA has considered the findings of its advisers on this criterion and accepts their recommendations.

- (iv) The APVMA is satisfied that the proposed use of the product *TORPEDO HERBICIDE* containing the new active constituent, florasulam, and the already registered active constituent, clopyralid for the post-emergent control or suppression of broadleaf weeds in barley, triticale and wheat is not likely to have an unintended effect that is harmful to harmful to animals, plants or things or to the environment.

The Department of the Environment and Heritage (DEH) has assessed the data in support of this product. Environmental fate studies indicate that florasulam is not expected to persist in soils. Similarly, florasulam is not expected to persist in aquatic systems. This lack of persistence coupled with the low application rate means that levels of florasulam in the environment from the proposed use will be low.

The proposed use of *TORPEDO HERBICIDE* is not likely to present unacceptable risk to birds, mammals, aquatic species other than algae and aquatic plants, beneficials, soil respiration processes or non-target plants. Risk to algae and aquatic plants is expected to be acceptable as a result of mitigation resulting from the specification of buffer distances with respect to water bodies and non-target vegetation and the recommendation that spraying not take place for 48 hours if heavy rains are expected.

The APVMA has considered the findings of DEH and accepts its recommendations on this criterion.

- (v) The APVMA is satisfied that the proposed use of *TORPEDO HERBICIDE* would not adversely affect trade between Australia and places outside Australia.

No detectable residues of florasulam are expected to occur in cereal grains, and therefore, unlikely to unduly prejudice trade in cereal. Furthermore, no export intervals are required for florasulam as there will be no detectable residues in the exported commodity; wheat and barley grain or processed wheat and barley foods.

Forage and fodder treated crops, as well as grain, may be used as livestock feeds. Residues of florasulam in all of these commodities are expected to be below the LOQ. The feeding of these commodities to livestock is not expected to result in detectable residues in animal commodities, and thus prejudice trade in animal commodities.

The overall risk to export trade in cereal and animal commodities from the registration of *TORPEDO HERBICIDE* is considered to be negligible.

In relation to its assessment of efficacy under section 14(3)(f), the APVMA proposes to determine that:

- (i) The APVMA is satisfied the data from trials supporting the efficacy of *TORPEDO HERBICIDE* adequately demonstrates that under local conditions this product will be effective for the proposed uses.

Public Release Summary

A Public Release Summary of the evaluation is available by contacting David Hutchison on telephone (02) 6210 4748. Written submissions on the APVMA's proposal to grant the application for registration should be addressed in writing to:

NOTICE

THE RECONSIDERATION OF REGISTRATIONS OF PRODUCTS WHICH CONTAIN NEOMYCIN AND THEIR ASSOCIATED APPROVED LABELS

In accordance with Part 2, Division 4 of the Agvet Codes, the APVMA has commenced its reconsideration (hereafter referred to as review) of the registrations of oral, intra-mammary and injectable preparations of neomycin (including combination products with other antibiotics) and their associated approved labels.

Neomycin is an aminoglycoside antibiotic contained in a variety of veterinary preparations including topical creams/ointments, eye drops/ointments, oral tablets, oral suspensions, injectables, and intra-mammary preparations for use in food-producing and non-food-producing animals. Two major uses of neomycin are for control of scours in calves and for treatment of mastitis in dairy cattle.

The principal concerns raised by State departments of primary industry which led to the nomination of neomycin for review relate to (1) residue violations in food-producing animals treated with oral, intra-mammary and injectable preparations of neomycin, and (2) target animal safety.

No residue or animal safety concerns have been identified for topical formulations, neomycin used as an antibiotic preservative in small animal vaccines, and semen extender powder preparations. Therefore, the review of neomycin will only consider oral, intra-mammary and injectable preparations products used to treat food-producing animals.

The APVMA has commenced this review in order to assess whether it can be satisfied that continued use of, or any other dealing with, oral, intra-mammary and injectable preparations containing neomycin in accordance with the approved instructions for use:

- would not be an undue hazard to the safety of people exposed to them during their handling or people using anything containing their residues; and/or
- would not unduly prejudice trade or commerce between Australia and other places outside Australia; and/or
- would not be likely to have an unintended effect that is harmful to animals, plants, things or the environment.

It also appears that the labels for products containing neomycin may not comply with the requirements provided by paragraph 14(3)(d) of the AgVet Codes and may not contain adequate instructions relating to the matters referred to in paragraph 14 (3)(g).

The APVMA will review the following aspects of oral, intra-mammary and injectable preparations of neomycin and their associated approved labels:

- a) Residues:
 - i) the potential for residues to exceed standards, and thus pose an undue hazard to the safety of people using anything containing their residues.
 - i) the adequacy of withholding periods for the use of neomycin in food-producing species.

- b) Trade:
- i) the potential for residues in export commodities to exceed the tolerances of importing countries, and unduly prejudice trade or commerce between Australia and places outside Australia.
- c) Animal Safety:
- i) the potential for products which contain neomycin to result in ototoxicity and nephrotoxicity in target food-producing animals.

The APVMA will also consider whether product labels carry adequate instructions and warning statements. Such instructions include:

- the circumstances in which the product should be used;
- how the product should be used;
- the times when the product should be used;
- the frequency of the use of the product;
- the re-treatment interval for the product;
- the withholding period after the use of the product;
- the disposal of the product and its container;
- the safe handling of the product and first aid in the event of an accident caused by handling the product;
- any other matter prescribed by the regulations.

The registered products which are oral, intra-mammary and injectable preparations of neomycin and which are within the scope of the review are listed in Tables 1 to 3 below.

NOTICE

Application Summaries

The APVMA publishes complete application summaries on the APVMA website (http://www.apvma.gov.au/data_protection/appl_summaries.shtml). They are published in weekly instalments using the date the application was accepted for assessment. If an application summary has been amended, the APVMA will publish the amended version on the website and list it separately in the APVMA Gazette Notice for Application Summaries. As a requirement of Regulations 8C and E, some product names will appear as 'NOT AVAILABLE'. A summary will be removed from the website 28 days after the application has been finalised. Therefore, some summaries published in this notice may have already been removed prior to the Gazette being published.

Application summaries published since APVMA Gazette No.1, 2 January 2007.

AMENDMENT No.8J

AMENDMENTS TO THE MRL STANDARD

The Australian Pesticides and Veterinary Medicines Authority (APVMA) sets maximum residue limits (MRLs) of agricultural and veterinary chemicals in agricultural produce, particularly produce entering the food chain. These MRLs are set at levels which are not likely to be exceeded if the agricultural or veterinary chemicals are used in accordance with approved label instructions. At the same time the APVMA is satisfied, from dietary exposure assessment, that the levels are not an undue hazard to human health.

The MRL Standard lists MRLs of substances which may arise from the approved use of those substances or other substances, and provides the relevant residue definitions to which these MRLs apply.

The evaluation process takes into account studies on chemistry, metabolism, analytical methodology, residues, good agricultural practice, toxicology and dietary exposure. From time to time the evaluation process results in amendments to the MRL Standard. It should be noted that relevant MRLs are referred to Food Standards Australia New Zealand for incorporation into Standard 1.4.2 of the Food Standards Code entitled "Maximum Residue Limits".

Note: ‘*’ denotes that the maximum residue limit (MRL) has been set at or about the limit of analytical quantitation (see: Residue Guideline No.4, *Maximum Residue Limit Proposals ‘At or about the Limit of Analytical Quantitation’*, published in NRA Gazette No.9, p44, 5/9/95).

‘T’ denotes that the MRL, residue definition or use is temporary to enable further experimental work to be carried out in Australia or overseas, and will be reconsidered at some future date.

The MRL Standard is also accessible via the APVMA web page.
