NOTICE

pyroxsulam

in the product: *CRUSADER HERBICIDE*

The Australian Pesticides and Veterinary Medicines Authority (APVMA) has before it an application from Dow AgroSciences Australia Ltd for registration of a new product containing the active constituent pyroxsulam. The product, CRUSADER HERBICIDE, is for the control of grass and broadleaf weeds in certain varieties of wheat.

In accordance with sections 12 and 13 of the Agvet Code, the APVMA invites any person to submit a relevant written submission as to whether the application for registration should be granted. Submissions should state the grounds on which they are based. Such grounds should relate only to matters outlined below that the APVMA is required to take into account in deciding whether to grant the application. Comments must be received by the APVMA within 28 days of the date of this notice.

Particulars of Application

Proposed Product Name:	CRUSADER HERBICIDE
Applicant Company:	Dow AgroSciences Australia Ltd
Active Constituents:	Pyroxsulam
Poisons Sheduling:	Schedule 6
Statement of Claims:	For the control of grass and broadleaf weeds in certain varieties of wheat.
Pack sizes:	1L, 5L, 10L, 20L, 200L
Withholding Period:	Harvest: Wheat: Not required when used as directed. When using Crusader Herbicide in a tank mix with another product, observe the Harvest Withholding Period of the other product. Grazing/Stockfood: Wheat: DO NOT graze or cut for stockfood for 6 weeks after application. When using Crusader Herbicide in a tank mix with another product, observe whichever Stockfood Withholding Period is the longer.

Summary of the APVMA's evaluation of CRUSADER HERBICIDE in accordance with Section 14 of the Agricultural and Veterinary Chemicals Code (the 'Agvet Code'), scheduled to the Agricultural and Veterinary Chemicals Code Act 1994

The APVMA has evaluated the application and in its assessment in relation to human and environmental safety under section 14 of the Agvet Code, it proposes to determine that:

- (i) The APVMA is satisfied that the proposed use of CRUSADER HERBICIDE would not be an undue hazard to the safety of people exposed to it during its handling and use.

The Department of Health and Ageing, Office of Chemical Safety has conducted a risk assessment on CRUSADER HERBICIDE and concluded that it can be used safely.

Pyroxsulam has displayed low acute oral, dermal, and inhalational toxicity in rats. It is not a skin and eye irritant in rabbits but is a moderate to severe skin sensitiser in guinea pigs.

The product, CRUSADER HERBICIDE, has low acute oral and dermal toxicity, and low to moderate inhalational toxicity. However it is a severe eye irritant and a moderate skin irritant, and a skin sensitiser.

Personal protective equipment statements for the Safety Directions of CRUSADER HERBICIDE have been recommended by the OCS and have been included on the draft label.

The APVMA having considered the findings and recommendations of the OCS evaluation accepts these findings and recommendations.

- (ii) The APVMA is satisfied that the proposed use of CRUSADER HERBICIDE will not be an undue hazard to the safety of people using anything containing its residues.

Residue data were assessed by the APVMA and Maximum Residue Limits (MRLs) and associated Withholding Periods (WHPs) are recommended for CRUSADER HERBICIDE when used on wheat.

Based on the data provided, the following residue definition is considered appropriate: pyroxsulam

The recommended WHPs for CRUSADER HERBICIDE are stated on the draft label. Pyroxsulam MRLs are recommended for wheat (*0.01 mg/kg), edible offal (mammalian) (*0.01 mg/kg), eggs (*0.01 mg/kg), meat (mammalian) (*0.01 mg/kg), milks (*0.01 mg/kg), poultry meat (*0.01 mg/kg), poultry, edible offal (*0.01 mg/kg), fodder and straw of wheat grain *0.01 mg/kg and wheat forage (green) 0.1 mg/kg. [* Denotes that the MRL has been set at the limit of quantitation (LOQ).]

- (iii) The APVMA is satisfied that the proposed use of the active constituent pyroxsulam in CRUSADER HERBICIDE is not likely to be harmful to human beings if used according to the product label directions.

The APVMA has evaluated and proposes to approve the active constituent, pyroxsulam, and finds that the chemistry and manufacturing details of the product are acceptable. The proposed product has been assessed by the National Drugs and Poisons Scheduling Committee and has been included in Schedule 6 of the SUSDP. The appropriate Signal Heading appears on the label. First Aid and Safety Directions (hazard statements) for pyroxsulam and CRUSADER HERBICIDE have been recommended by the Commonwealth Department of Health and Ageing and have been included on the label.

The product is formulated overseas and will be packed in PET or FHDPE containers. CRUSADER HERBICIDE is determined to be a hazardous substance, based on NOHSC hazard classification of active and non-active constituents and product toxicology information provided.

The APVMA has considered the findings of its advisers on this criterion and accepts their recommendations.

- (iv) The APVMA is satisfied that the proposed use of the product CRUSADER HERBICIDE containing the new active constituent, pyroxsulam, would not be likely to have an unintended effect that is harmful to animals, plants or things or to the environment.

The Department of the Environment, Heritage, Water and the Arts has assessed data in support of the proposed use and has concluded that the risks to the environment from this use are acceptable.

On soil, degradation occurs mainly through biotransformation routes. Aerobic soil metabolism studies showed pyroxsulam readily degrades in soil with this confirmed in field studies. In aerobic water/sediment systems, pyroxsulam degrades in both the water and sediment compartments. No significant yearly carryover of pyroxsulam in treated soil is expected to occur.

Pyroxsulam is not expected to be toxic to birds, mammals, fish or aquatic invertebrates. Consistent with its herbicidal nature, pyroxsulam is very highly toxic to aquatic plants and certain algae as well as terrestrial plants. Terrestrial invertebrates were generally insensitive to pyroxsulam.

There is likely to be acceptable aquatic and terrestrial risk as a result of spray drift from the proposed ground application provided there is compliance with amendments of the label to specify the use of a medium quality spray and the need to avoid spraydrift onto native and other non-target plants and waterbodies.

The APVMA has considered the findings of the Department of the Environment, Water, Heritage and the Arts and accepts these conclusions.

- (v) The APVMA is satisfied that the proposed use of CRUSADER HERBICIDE would not unduly prejudice trade and commerce between Australia and places outside of Australia as per section 14 (3)(e)(iv) of the Agvet Codes.

The APVMA considers that the proposed use of pyroxsulam in CRUSADER HERBICIDE in accordance with the required instructions is unlikely to unduly prejudice trade and commerce between Australia and places outside Australia as per section 14(3)(e)(iv) of the Agvet Codes.

Quantifiable residues are not anticipated in wheat grains, or animal commodities following the consumption of grain, or other animal feeds.

A determination of the potential for undue prejudice to trade or commerce will be made following the completion of the public consultation process. Any areas of concern and possible management strategies have been outlined in the Public Release Summary.

In relation to its assessment of efficacy under section 14(3)(f), the APVMA proposes to determine that:

- (vi) The APVMA is satisfied the data from trials supporting the efficacy of CRUSADER HERBICIDE adequately demonstrates that under local conditions this product will be effective for the proposed uses.

Public Release Summary

A Public Release Summary (PRS) of the evaluation is available by contacting Colin Mc Cormack on telephone (02) 6210 4748. Written submissions on the APVMA's proposal to grant the application for registration should be addressed in writing to:

NOTICE

APVMA policy on responding to requests from new approval holders and registrants to access confidential commercial information submitted to the APVMA by others

Background

The APVMA receives frequent and numerous requests for confidential commercial information from approval holders and registrants who have acquired the approval or registration of existing constituents or chemical products from previous approval holders or registrants. Historically, the APVMA has processed these requests on the basis that previous approval holders or registrants provide letters of support authorising the disclosure. Such compliance is resource intensive and distracts the APVMA from core business.

Policy

Government regulators generally expect that when rights or interests are transferred between commercial entities, all relevant documentation relating to those rights or interests are transferred at the same time. For this reason, the APVMA assumes that approval holders and registrants will provide confidential commercial information relating to a constituent or chemical product such as formulation details with the sale of the approval or registration of that constituent or chemical product.

While the APVMA realises that, at times, there can be exceptional circumstances warranting the release of confidential commercial information by the APVMA to new approval holders or registrants such as the destruction of premises by fire or natural disaster, the APVMA should not be expected to divert resources to identify, collate and distribute confidential commercial information between approval holders or registrants following the sale of a constituent or chemical product.

As such, the APVMA will only distribute confidential commercial information where there is a statutory regime for that distribution, for example, access to information under the *Freedom of Information Act 1982* or publication of information under the Agvet Codes. This is because the release of information to new approval holders or registrants in the manner described above may affect the interests of other third parties referenced in the information such as manufacturers, formulators and individuals who must be consulted regarding the disclosure of their business or personal information.

When confronted with future requests for information of this type, the APVMA will advise new approval holders and registrants to contact previous approval holders or registrants directly for information previously submitted to the APVMA. In the event that new approval holders or registrants cannot obtain information directly from previous approval holders or registrants, new approval holders or registrants will then be invited to apply to access the information under the *Freedom of Information Act 1982*. Such applications involve consultation with all parties referenced in the information, fees and charges for processing requests, and exemptions for confidential information or information relating to business, commercial and financial affairs.

For more information regarding the process for accessing information under the *Freedom of Information Act 1982*, please refer to the APVMA website or contact the APVMA FOI Coordinator on foi@apvma.gov.au or:

APVMA policy on responding to requests for information from approval holders and registrants regarding their confidential commercial information

Background

The APVMA also receives numerous and frequent requests for confidential commercial information from approval holders and registrants relating to information previously submitted to the APVMA by those persons such as formulation and formulator details. This information is recorded in the Record of Active Constituents or the Register of Chemical Products and is maintained for regulatory and compliance purposes. Historically, the APMVA has processed these requests on the basis that the approval holder or registrant who supplied the information is entitled to request the APVMA provide a copy of the information. However, given the volume of requests for information of this nature, such compliance diverts APVMA resources.

Policy

Confidential commercial information such as formulation and formulator details is critical to the ongoing approval or registration of a constituent or chemical product. As such, the APVMA expects approval holders and registrants to maintain sufficient record keeping practices and keep copies of information previously submitted by them to the APVMA.

Some information recorded in the Record of Active Constituents and the Register of Chemical Products is available on the APVMA PUBCRIS database: see www.apvma.gov.au. Other information is confidential and not available publicly.

Where there are exceptional circumstances warranting the provision of confidential commercial information to approval holders or registrants such as destruction of premises by fire or natural disaster, the APVMA will consider releasing confidential commercial information. As a general rule, the APVMA will only process future requests for information from approval holders or registrants regarding their own confidential commercial information in exceptional circumstances.

AMENDMENT No. 10K

AMENDMENTS TO THE MRL STANDARD

The Australian Pesticides and Veterinary Medicines Authority (APVMA) sets maximum residue limits (MRLs) of agricultural and veterinary chemicals in agricultural produce, particularly produce entering the food chain. These MRLs are set at levels which are not likely to be exceeded if the agricultural or veterinary chemicals are used in accordance with approved label instructions. At the same time the APVMA is satisfied, from dietary exposure assessment, that the levels are not an undue hazard to human health.

The MRL Standard lists MRLs of substances which may arise from the approved use of those substances or other substances, and provides the relevant residue definitions to which these MRLs apply.

The evaluation process takes into account studies on chemistry, metabolism, analytical methodology, residues, good agricultural practice, toxicology and dietary exposure. From time to time the evaluation process results in amendments to the MRL Standard. It should be noted that relevant MRLs are referred to Food Standards Australia New Zealand for incorporation into Standard 1.4.2 of the Food Standards Code entitled “Maximum Residue Limits”.

Note: “*” denotes that the maximum residue limit (MRL) has been set at or about the limit of analytical quantitation (see: Residue Guideline No.4, *Maximum Residue Limit Proposals ‘At or about the Limit of Analytical Quantitation’*, published in NRA Gazette No.9, p44, 5/9/95).

‘T’ denotes that the MRL, residue definition or use is temporary to enable further experimental work to be carried out in Australia or overseas, and will be reconsidered at some future date.

The MRL Standard is also accessible via the APVMA web page.

**Notice Under
Section 101 of the Agvet Codes
No.0002 of 2008**

“Recall” of an Unregistered Veterinary Chemical Product

On 03 March 2008 the Australian Pesticides and Veterinary Medicines Authority (APVMA) issued a Notice to Hedley and Hedley Pty Ltd (ACN 003 884 580) (“the supplier”) pursuant to Section 101 of the Agvet Codes, in relation to the following product:

- Barber’s Pole and General Worm Remedy for Sheep and Goats.

The Notice requires the supplier to recall all stocks of the product in the possession of End Users, to stop supply and quarantine any stocks of the product they hold, and to report to the APVMA.

The product is a veterinary chemical product and the APVMA have not registered the product under the Agvet Codes.
