Summary of the APVMA's evaluation of DUPONT ALTACOR INSECTICIDE, DUPONT CORAGEN INSECTICIDE and DUPONT ACELEPRYN INSECTICIDE in accordance with Section 14 of the Agricultural and Veterinary Chemicals Code (the 'Agvet Code'), scheduled to the Agricultural and Veterinary Chemicals Code Act 1994

The APVMA has evaluated the applications and in its assessment in relation to human and environmental safety under section 14 of the Agvet Code, it proposes to determine that:

- (i) The APVMA is satisfied that the proposed use of DUPONT ALTACOR INSECTICIDE, DUPONT CORAGEN INSECTICIDE and DUPONT ACELEPRYN INSECTICIDE would not be an undue hazard to the safety of people exposed to it during its handling and use.

The Office of Chemical Safety (OCS) has conducted a risk assessment on DUPONT ALTACOR INSECTICIDE, DUPONT CORAGEN INSECTICIDE and DUPONT ACELEPRYN INSECTICIDE and concluded that the products can be safely used in accordance with the recommended Safety Directions.

The APVMA having considered the findings and recommendations of the OCS evaluation accepts these findings and recommendations.

- (ii) The APVMA is satisfied that the proposed use of DUPONT ALTACOR INSECTICIDE, DUPONT CORAGEN INSECTICIDE and DUPONT ACELEPRYN INSECTICIDE will not be an undue hazard to the safety of people using anything containing residues of the active constituent chlorantraniliprole.

Residue data were assessed by the APVMA and Maximum Residue Limits (MRLs) and associated withholding periods (WHPs) are recommended for

chlorantraniliprole in DUPONT ALTACOR INSECTICIDE, DUPONT CORAGEN INSECTICIDE and DUPONT ACELEPRYN INSECTICIDE when used in accordance with the proposed label instructions.

Based on the metabolism data provided, the following residue definition is considered appropriate:

Commodities of plant origin, and commodities of animal origin other than milk:
chlorantraniliprole.

Milk and milk products: sum of chlorantraniliprole, 3-bromo-*N*-[4-chloro-2-(hydroxymethyl)-6-[(methylamino)carbonyl]phenyl]-1-(3-chloro-2-pyridinyl)-1*H*-pyrazole-5-carboxamide, and 3-bromo-*N*-[4-chloro-2-(hydroxymethyl)-6-[[[(hydroxymethyl)amino]carbonyl]phenyl]-1-(3-chloro-2-pyridinyl)-1*H*-pyrazole-5-carboxamide, expressed as chlorantraniliprole

Chlorantraniliprole MRLs are recommended for brassica vegetables (0.3 mg/kg); head lettuce (3 mg/kg); leafy vegetables (except head lettuce) (15 mg/kg); potatoes (*0.01 mg/kg); celery (5 mg/kg); rhubarb (5 mg/kg); fruiting vegetables (cucurbits) (0.2 mg/kg); fruiting vegetables other than cucurbits (except chilli) (0.3 mg/kg); peppers (chilli) (1 mg/kg); pome fruit (0.3 mg/kg); stone fruits (1 mg/kg); grapes (0.3 mg/kg); cottonseed (0.3 mg/kg); edible offal [mammalian] (*0.01 mg/kg); eggs (0.03 mg/kg); meat [mammalian] (in the fat) (*0.01 mg/kg); milks (*0.01 mg/kg); poultry, edible offal of (*0.01 mg/kg); poultry meat (in the fat) (*0.01 mg/kg); and all other foods (*0.01 mg/kg). Chlorantraniliprole MRLs have been set for the following animal feed commodities: apple pomace (dry) (3 mg/kg); cottonseed meal and hulls (0.7 mg/kg); grape pomace (dry) (2 mg/kg); tomato pomace (dry) (2 mg/kg); and primary feed commodities [other than apple pomace, dry; cottonseed meal and hulls; grape pomace, dry; and tomato pomace, dry] (0.5 mg/kg). [Note: *denotes that the MRL has been set at the limit of analytical quantitation.]

The recommended WHPs for DUPONT ALTACOR INSECTICIDE, DUPONT CORAGEN INSECTICIDE and DUPONT ACELEPRYN INSECTICIDE are stated on the draft labels.

[* Denotes that the MRL has been set at the limit of quantitation (LOQ).]

- (iii) The APVMA is satisfied that the proposed use of the active constituent chlorantraniliprole in DUPONT ALTACOR INSECTICIDE, DUPONT CORAGEN INSECTICIDE and DUPONT ACELEPRYN INSECTICIDE is not likely to be harmful to human beings if used according to the product label directions.

The APVMA has evaluated and proposes to approve the active constituent, chlorantraniliprole, and finds that the chemistry and manufacturing details of the product are acceptable.

The Office of Chemical Safety (OCS) has conducted a toxicological assessment on chlorantraniliprole. The Acceptable Daily Intake (ADI) for chlorantraniliprole was established at 1.58 mg/kg bw/day. The establishment of

an Acute Reference Dose (ARfD) was not justified for chlorantraniliprole based on the lack of identified hazard.

The National Drugs and Poisons Schedule Committee (NDPSC) considered the toxicity of the products and their active ingredient. The NDPSC noted that due to chlorantraniliprole's low overall toxicity it did not require scheduling and should therefore be placed in Appendix B of the SUSDP.

First Aid Instructions for chlorantraniliprole in DUPONT ALTACOR INSECTICIDE, DUPONT CORAGEN INSECTICIDE and DUPONT ACELEPRYN INSECTICIDE have been recommended by the Office of Chemical Safety (OCS) and have been included on the product labels.

The APVMA has considered the findings of its advisers on this criterion and accepts their recommendations.

- (iv) The APVMA is satisfied that the proposed uses of DUPONT ALTACOR INSECTICIDE, DUPONT CORAGEN INSECTICIDE and DUPONT ACELEPRYN INSECTICIDE are not likely to have an unintended effect that is harmful to animals, plants or the environment.

The Department of the Environment, Water, Heritage and the Arts (DEWHA) have assessed the environmental risk associated with DUPONT ALTACOR INSECTICIDE, DUPONT CORAGEN INSECTICIDE and DUPONT ACELEPRYN INSECTICIDE and considers that the applications contain adequate information to demonstrate that the use according to the labels are unlikely to have an unintended effect that is harmful to animals, plants or things, or to the environment.

The APVMA has considered the findings of the DEWHA and accepts these conclusions.

- (v) The APVMA is satisfied that the proposed use of DUPONT ALTACOR INSECTICIDE, DUPONT CORAGEN INSECTICIDE and DUPONT ACELEPRYN INSECTICIDE would not unduly prejudice trade and commerce between Australia and places outside of Australia as per section 14 (3)(e)(iv) of the Agvet Codes.

A determination of the potential for undue prejudice to trade or commerce will be made following the completion of the public consultation process. Any areas of concern and possible management strategies have been outlined in the Public Release Summary.

In relation to its assessment of efficacy under section 14(3)(f), the APVMA proposes to determine that:

- (vi) The APVMA is satisfied the data from trials supporting the efficacy of DUPONT ALTACOR INSECTICIDE, DUPONT CORAGEN INSECTICIDE and DUPONT ACELEPRYN INSECTICIDE adequately demonstrates that under local conditions the products will be effective for the proposed uses.

Public Release Summary

A Public Release Summary (PRS) of the evaluation is available by contacting Colin McCormack on telephone (02) 6210 4748. Written submissions on the APVMA's proposal to grant the application for registration should be addressed in writing to:

AMENDMENT No. 12K

AMENDMENTS TO THE MRL STANDARD

The Australian Pesticides and Veterinary Medicines Authority (APVMA) sets maximum residue limits (MRLs) of agricultural and veterinary chemicals in agricultural produce, particularly produce entering the food chain. These MRLs are set at levels which are not likely to be exceeded if the agricultural or veterinary chemicals are used in accordance with approved label instructions. At the same time the APVMA is satisfied, from dietary exposure assessment, that the levels are not an undue hazard to human health.

The MRL Standard lists MRLs of substances which may arise from the approved use of those substances or other substances, and provides the relevant residue definitions to which these MRLs apply.

The evaluation process takes into account studies on chemistry, metabolism, analytical methodology, residues, good agricultural practice, toxicology and dietary exposure. From time to time the evaluation process results in amendments to the MRL Standard. It should be noted that relevant MRLs are referred to Food Standards Australia New Zealand for incorporation into Standard 1.4.2 of the Food Standards Code entitled “Maximum Residue Limits”.

Note: ‘*’ denotes that the maximum residue limit (MRL) has been set at or about the limit of analytical quantitation (see: Residue Guideline No.4, *Maximum Residue Limit Proposals ‘At or about the Limit of Analytical Quantitation’*, published in NRA Gazette No.9, p44, 5/9/95).

‘T’ denotes that the MRL, residue definition or use is temporary to enable further experimental work to be carried out in Australia or overseas, and will be reconsidered at some future date.

The MRL Standard is also accessible via the APVMA web page.

NOTICE

Preliminary Review Findings of The Review of Approvals and Registrations Related to Dichlorvos

Dichlorvos is a volatile organophosphorus insecticide with fumigant and penetrant action. It is commonly used for the control of a large variety of insects in storage areas in domestic, commercial and industrial premises. Its main food use is for stored grain and potatoes, while it is also applied to animal housings, greenhouses, glasshouses, and mushroom houses. Outdoor uses include the treatment of garbage bins, picnic areas and rockeries. Home garden products are available for use in rooms or non-food storage areas such as wardrobes and drawers, or outside garbage bins.

Dichlorvos was nominated for review as part of the APVMA's Chemical Review Program because of its high acute toxicity and concerns over its carcinogenic potential. In December 1996, the APVMA [previously the National Registration Authority (NRA)] announced that dichlorvos was one of the seven chemicals selected for reconsideration in the second cycle of the NRA's Existing Chemical Review Program. The chemical was placed under reconsideration, in accordance with Division 4 Part 2 of the Agricultural and Veterinary chemicals Code Act, 1994 (Agvet codes) because of :

- toxicological concerns and human poisoning;
- concerns for adverse occupational health effects resulting from sprayed workplaces;
- regulatory actions in the USA arising from environmental concerns; and
- residue violations in cereals and their products.

The APVMA review covers all aspects of the registrations of dichlorvos products, and active constituent and label approvals.

In June 2000, the APVMA released a *Dichlorvos Draft Review* report¹ for public consultation. A summary of the data evaluated and the proposed regulatory actions were published in that report.

Since the publication of that report, the APVMA became aware of new toxicological and exposure studies held by a United States manufacturer, which had not previously been submitted. The APVMA is obliged to consider all information of which it is aware before making a final decision regarding the future of a chemical under review. Therefore, the APVMA, exercised its powers under section 159 of the Agvet Codes, to obtain those studies.

After assessing the new data, the Office of Chemical Safety (OCS) revised the Acute Reference Dose (ARfD) for dichlorvos. Consequently, both the occupational health and safety assessment and acute dietary risk assessment were revised.

The revised assessments, proposed review findings and regulatory approach are detailed in the document entitled *The Reconsideration of Approvals of the Active Constituent Dichlorvos*,

¹ 'Draft Review' reports are now called 'Preliminary Review Findings' reports.

Registrations of Products Containing Dichlorvos, and Approvals of Product Labels. Preliminary Review Findings Report (PRF) which can be accessed at <http://www.apvma.gov.au/chemrev/dichlorvos.shtml>.

SUMMARY OF PROPOSED KEY FINDINGS

The active constituent dichlorvos meets the requirements for continued approval.

The home garden product ‘Sureguard Pest Strip Household Insecticide’ (product number 45596) poses an unacceptable chronic inhalational risk to human health.

There is insufficient information to predict the extent of operator exposure in relation to application of dichlorvos by the following methods - surface sprays, space sprays, crack and crevice treatments, pressurised gas in enclosed spaces where the operator must enter the space under fumigation, outdoor and indoor applications by fogging or misting, mechanical applications to grain, foliar application to avocados, application by paintbrush, and application by watering can in household situations. Modelling studies showed that operator exposure could occur at unacceptable levels.

Insufficient data were available to allow the establishment of appropriate MRLs for potatoes, mushrooms and food crops grown in glasshouses and greenhouses. Without information relating to residues in crops and commodities in these situations, the resulting dietary exposure to dichlorvos residues from such uses cannot be estimated.

Detectable dichlorvos residues are not expected to occur in animal commodities as a result of the post-harvest use of dichlorvos on cereal grains or from other approved uses. Therefore, continued use of registered dichlorvos products would not unduly prejudice trade between Australia and places outside Australia.

The safety directions on the existing product labels are inadequate as they do not reflect current specifications contained in the First Aid Instructions and Safety Directions Handbook. Similarly, the product labels do not contain adequate instruction to protect the environment.

The existing product labels do not carry adequate instructions for Re-entry Intervals to prevent post-application exposure of people to levels of dichlorvos that may be harmful. It is recommended that labels of relevant products be varied to impose appropriate re-entry intervals.

SUMMARY OF PROPOSED KEY REGULATORY ACTIONS

Active constituent

The active constituent approvals listed in Table 1 can be affirmed. However, the approval holders are required to provide justification, on toxicological grounds, for inclusion of a recommended impurity limit for chloral at 5 g/kg, in the standard for the dichlorvos active constituent.

Product labels

For continued registration, the labels of products will need to be varied as follows:

Include:

- Appropriate restraints, first aid and safety directions and personal protective equipment
- Instructions and restraints for environmental protection
- Appropriate REIs
- Appropriate with-holding periods and out-turn periods
- Restrictions to limit the use on stored grains to stored cereal grains only
- Restrictions to limit the use in empty silos to empty grain silos

Delete

- Post-harvest use of dichlorvos on pulses, and use on avocados, mushrooms, potatoes, greenhouse/glasshouse crops (excepting ornamentals).
- Use patterns involving surface spraying; space spraying; crack and crevice treatment; outdoor and indoor application by fogging or misting; mechanical application to grain; pressurised gas in enclosed spaces where the operator must enter the space under fumigation; portable fogging or misting equipment in enclosed spaces where the operator must enter the space under fumigation; application by watering can; application by paintbrush; and broadacre application to avocados.

Product registrations

If the proposed label variations are made, then the APVMA can be satisfied that the requirements for continued registration of products in Table 2 are met. Accordingly, the APVMA can then affirm the registrations of products listed in Table 2.

Proposed registration cancellation as an outcome of the review findings

Continued use of, or any other dealing with, the product Sureguard Pest Strip Household Insecticide (APVMA product code 45596) is likely to have a harmful effect on human beings. However, the registration of this product lapsed, effective from 1 July 2007. Normally a two-year sales period is allowed after product registrations lapse. However, as a consequence of the proposed finding of the review, the APVMA proposes that, for Sureguard Pest Strip Household Insecticide, the two-year sales period, will be stopped at the finalisation of the review.

For details of proposed review findings and regulatory actions, see the Preliminary Review Findings document of May 2008 at <http://www.apvma.gov.au/chemrev/dichlorvos.shtml>.

The APVMA invites persons and organisations to submit their comments and suggestions on this Preliminary Review Findings document directly to the APVMA. Your comments will assist the

APVMA in preparing the Final Review Report and Regulatory Decision. Submissions specifically addressing the areas of concern noted in the Preliminary Review Findings report must be in writing and reach the APVMA by 29 August 2008.

Submissions can be sent either by email to chemrev@apvma.gov.au or by mail to:

NOTICE

Cancellation of BIFENTHRIN products (80 g/L or 100 g/L) where a 500 mL pack size exists

Bifenthrin is an agricultural insecticide used for the control of borers and termites in timber, insect pests in agricultural crops (bananas, apples, pears, ornamentals) and turf, as well as for general pest control (spiders, ants, fleas, flies, mosquitos). Bifenthrin is contained in over 100 registered products although the action taken by the APVMA in early 2008 relates only to those products containing bifenthrin at 80 g/L or 100 g/L where a 500 mL pack size had been approved (7 products).

The APVMA was concerned with bifenthrin products, specifically those with a product concentration of 80 g/L or 100 g/L in a 500 mL pack size. The concerns were that:

- such small pack sizes could find their way into the home garden market where they are available to use by householders (likely to find this pack size convenient should they wish to do their own pest control);
- the toxicity of these products does not conform with the criteria outlined in MORAG for pesticides intended for domestic use (Section 3.6 of Part 3 toxicology) - the oral toxicities of these 500 mL products are generally around 500 mg/kg bw, well below the acceptable level of 1500 mg/kg bw for home garden products;
- the use of such products would require the use of extensive personal protective equipment not readily available to householders; and
- some products contained a label claim for 'post construction barrier treatments for the protection of existing buildings,' with a 500 mL pack insufficient to treat and protect a typically-sized building.

Therefore the possible use of products containing 80 g/L and 100 g/L bifenthrin in 500 mL pack sizes by householders raises concerns relating both to their safety and effectiveness. Consequently, it was apparent that the 500 mL packs of 80 g/L and 100 g/L bifenthrin products do not comply with s.14(3)(e)(ii) of the Agvet Codes.

The APVMA advised registrants that it could no longer be satisfied that the continued use of bifenthrin products (80 g/L or 100 g/L), in a 500 mL pack size, would not be an undue hazard to the safety of users. Registrants have voluntarily varied their product registration details removing these pack sizes from their product range.

Given the above concerns, the APVMA will not allow future registration of products at this concentration or pack size.

Affected products (containing 80g/L or 100g/L bifenthrin with 500 mL pack sizes):

- Talstar 80 SC Insecticide/Miticide (45703)
- Scotts Procide 80SC Insecticide/Miticide (55020)
