GENERAL INFORMATION

The *APVMA (Australian Pesticides and Veterinary Medicines Authority) Gazette* is published fortnightly and contains details of the registration of agricultural and veterinary chemicals products and other approvals granted by the APVMA, notices as required by the Agricultural and Veterinary Chemicals Code (the Agvet Code) and related legislation and a range of regulatory material issued by the APVMA.

Pursuant to section 53(1) of the Agvet Code, the APVMA has decided that it is unnecessary to publish details of applications made for the purpose of notifying minor variations to registration details. The APVMA will however report notifications activity in quarterly statistical reports.

DISTRIBUTION AND SUBSCRIPTION

From February 2010, the APVMA will publish the *APVMA Gazette* in electronic format only. The *APVMA Gazette* and information about subscribing to the gazette alert service are available on the APVMA website, www.apvma.gov.au.

Copies of the *APVMA Gazette* from November 1999 until July 2009 will remain available from the APVMA website.

Amendments to the MRL Standard

AMENDMENT NO. 2N

The Australian Pesticides and Veterinary Medicines Authority (APVMA) sets maximum residue limits (MRLs) of agricultural and veterinary chemicals in agricultural produce, particularly produce entering the food chain. These MRLs are set at levels which are not likely to be exceeded if the agricultural or veterinary chemicals are used in accordance with approved label instructions. At the same time the APVMA is satisfied, from dietary exposure assessment, that the levels are not an undue hazard to human health.

The MRL Standard lists MRLs of substances which may arise from the approved use of those substances or other substances, and provides the relevant residue definitions to which these MRLs apply.

The evaluation process takes into account studies on chemistry, metabolism, analytical methodology, residues, good agricultural practice, toxicology and dietary exposure. From time to time the evaluation process results in amendments to the MRL Standard. It should be noted that relevant MRLs are referred to Food Standards Australia New Zealand for incorporation into Standard 1.4.2 of the Food Standards Code entitled "Maximum Residue Limits".

Note: "*" denotes that the maximum residue limit (MRL) has been set at or about the limit of analytical quantitation (see: Residue Guideline No.4, *Maximum Residue Limit Proposals 'At or about the Limit of Analytical Quantitation'*, published in NRA Gazette No.9, p44, 5/9/95).

'T' denotes that the MRL, residue definition or use is temporary to enable further experimental work to be carried out in Australia or overseas, and will be reconsidered at some future date.

The MRL Standard is also accessible via the APVMA website, www.apvma.gov.au

Preliminary Review Findings Related to Approvals and Registrations of Thiophanate-Methyl

Thiophanate-methyl is a broad-spectrum systemic fungicide for agricultural use in Australia. It is absorbed by the roots and leaves of treated plants and has a protective and curative action. Thiophanate-methyl is registered in several other countries (Canada, New Zealand, the USA and the UK) for food and non-food uses. However, in Australia at the time of this review, thiophanate-methyl was not registered for use on food-producing species; it was only used for the control of soil-borne diseases of ornamental plants.

The APVMA, in accordance with Part 2, Division 4, of the Agvet Codes, has reviewed the following aspects of active constituent approvals, product registrations and label approvals for thiophanate-methyl:

- Toxicology and public health, including:
 - the potential risks following exposure of humans via the oral, dermal and inhalational routes; and
 - the potential for impairment of reproduction and development.
- Occupational health and safety, including:
 - risks arising from exposure during handling and applications;
 - re-entry exposure risks; and
 - determination of appropriate personal protective clothing requirements.

Following the completion of the assessment of data for the review of thiophanate-methyl, the APVMA has found that the use of products containing thiophanate-methyl in accordance with amended label instructions would not be likely to have a harmful effect on human health.

In view of these findings, the APVMA proposes to take the following regulatory actions:

- a) Affirm active constituent approval (Table 1)
- b) Vary label approvals (Table 2).

To satisfy the requirements for continued registration of products, the following label variations are proposed:

1. The following re-entry statement to be amended on the product label:

RE-ENTRY: Do not allow entry into treated areas or rehandle treated plants or soil for 12 hours after treatment unless wearing cotton overalls buttoned to the neck and wrist (or equivalent clothing) and chemical resistant gloves. Clothing must be laundered after each day's use.
2. Safety directions, first aid instructions and warning statements: the existing FAISD Handbook safety directions for the three registered thiophanate-methyl products remain appropriate, except that 'PVC gloves' are to be replaced by 'chemical resistant gloves'. The existing first aid instructions for thiophanate-methyl formulations remain appropriate. No warning statements are required for thiophanate-methyl products.
3. No first aid instructions for thiophanate-methyl currently exist in the FAISD Handbook. However the first aid instruction 'a' appears on the labels of all currently registered thiophanate-methyl product labels (because of the presence of either etridiazole or mancozeb in the product formulation).

CODE	FIRST AID INSTRUCTION
a.	If poisoning occurs, contact a doctor or Poisons Information Centre. Phone Australia 131126

Based on the acute hazard of thiophanate-methyl, the OCSEH considers that the existing first aid instruction 'a' appropriate. As a result, a new row entry for thiophanate-methyl is recommended for the FAISD handbook.

No warning statements are required for thiophanate-methyl products.

4. The current labels for thiophanate-methyl indicate that these products are not for home garden use. Furthermore, thiophanate-methyl products require the use of chemical resistant gloves and goggles under the product label's safety directions. Ag MORAG (Agricultural Manual of Requirements and Guidelines) states that the use of a home garden product should not require special precautions or equipment, such as PVC gloves or goggles. On this basis, the APVMA requires the restraint "NOT FOR HOME GARDEN USE" to be included on all thiophanate-methyl product labels.

The APVMA also proposes to cancel obsolete labels that do not contain adequate instructions.

As a result of the evaluation of thiophanate-methyl by OCSEH, the Department of Health and Ageing has recommended to the NDPSC that thiophanate-methyl be placed in Schedule 6 with a cut-off to Schedule 5 at 25 per-cent thiophanate-methyl. However, no change to current thiophanate-methyl product labels is required since all currently registered thiophanate-methyl products contain 25 per-cent or less thiophanate-methyl and display a Schedule 5 signal heading on the product label. This signal heading is based on the additional active constituents contained in thiophanate-methyl products (either mancozeb or etridiazole), which are Schedule 5 poisons. The entry for thiophanate-methyl will be amended in the SUSDP to reflect these changes.

- c) Affirm product registrations.

If the proposed label variations are made then the product registrations and label approvals of the products listed in Table 2 can be affirmed.

The APVMA's detailed findings can be found in the APVMA's Preliminary Review Findings, available on the APVMA website, <http://www.apvma.gov.au>.

Removal of Lindane from the Priority Candidate Review List

NOTICE

When the National Registration Scheme was introduced in March 1995, the APVMA assumed responsibility for over 5,000 chemical product registrations granted under earlier arrangements in Australia's States and Territories. The APVMA considered that some of the chemicals required reconsideration (review) to ensure that they met contemporary standards of safety and performance, taking into account any new information and scientific data generated since their registration.

On the 2 May 1995 the APVMA announced in the Commonwealth of Australia Gazette No. NRA 5 the 'Existing Chemical Review Program Nominations & Priority Candidate Review List'. The chemicals on the Priority Candidate Review List (PCRL) were a list of chemicals to be reviewed by the APVMA Chemical Review Program. Lindane was included in the list.

In May 2009 amendments were made to Annex A (Elimination) of the Stockholm Convention on Persistent Organic Pollutants (POPs) to list nine additional chemicals as POPs, one of which was lindane. The Australian Government is in the process of ratifying this decision, expected to occur 12 – 18 months after the decision to list lindane as a POP. Listing requires national measures to be taken to eliminate the production and use of lindane.

Following discussions with the APVMA and the Department of Agriculture, Fisheries and Forestry about the future of lindane, the sole registrant advised that the importation of lindane active constituent had ceased in 2009 and that it wished to withdraw the registration of the sole remaining lindane product which had a use as an insecticide and acaricide in the pineapple industry. The processes to cancel the sole remaining lindane product registration and remove the label from PubCRIS were completed on 7th June 2010.

The APVMA advises that there are longer any registered products which contain lindane and therefore this compound has been removed from the PCRL as a review is not necessary. An updated Priority Candidate Review List (PCRL) may be found on the APVMA's website at http://www.apvma.gov.au/products/review/a_z_reviews.php (click on the 'Nominated' tab).

For additional information about the chemical review program, see <http://www.apvma.gov.au/products/review/index.php>.
