GENERAL INFORMATION

The *APVMA (Australian Pesticides and Veterinary Medicines Authority) Gazette* is published fortnightly and contains details of the registration of agricultural and veterinary chemicals products and other approvals granted by the APVMA, notices as required by the Agricultural and Veterinary Chemicals Code (the Agvet Code) and related legislation and a range of regulatory material issued by the APVMA.

Pursuant to section 53(1) of the Agvet Code, the APVMA has decided that it is unnecessary to publish details of applications made for the purpose of notifying minor variations to registration details. The APVMA will however report notifications activity in quarterly statistical reports.

DISTRIBUTION AND SUBSCRIPTION

From February 2010, the APVMA will publish the *APVMA Gazette* in electronic format only. The *APVMA Gazette* and information about subscribing to the gazette alert service are available on the APVMA website, www.apvma.gov.au.

Copies of the *APVMA Gazette* from November 1999 until July 2009 will remain available from the APVMA website.

NOTICE – NEW AGRICULTURAL CHEMICAL PRODUCTS

Polydimethylsiloxane in the product Aquatain AMF Liquid Mosquito Film

The Australian Pesticides and Veterinary Medicines Authority (APVMA) has before it an application from Aquatain Pty Ltd, for registration of a new product containing the active polydimethylsiloxane. The product is Aquatain AMF Liquid Mosquito Film. The product is for the control of mosquitoes in standing water.

PARTICULARS OF THE APPLICATION

Proposed Product Name(s):	Aquatain AMF Liquid Mosquito Film
Applicant Company:	Aquatain Pty Ltd
Name of Active Constituent:	polydimethylsiloxane
Signal Heading:	Exempt from scheduling
Summary of Proposed Use:	Control of mosquitoes in standing water in urban environments
Pack Sizes:	250 mL to 1 L
Withholding Period:	Not required

SUMMARY OF THE APVMA'S EVALUATION OF AQUATAIN AMF LIQUID MOSQUITO FILM IN ACCORDANCE WITH SECTION 14(3)(E) AND (F) OF THE AGRICULTURAL AND VETERINARY CHEMICALS CODE (THE 'AGVET CODE'), SCHEDULED TO THE *AGRICULTURAL AND VETERINARY CHEMICALS CODE ACT 1994*

The APVMA has evaluated the application and in its assessment in relation to human and environmental safety under section 14(3)(e) of the Agvet Code, it proposes to determine that:

- (i) The APVMA is satisfied that the proposed use of Aquatain AMF Liquid Mosquito Film would not be an undue hazard to the safety of people exposed to it during its handling and use.

The Office of Chemical Safety and Environmental Health (OCSEH) in the Department of Health and Ageing has conducted a risk assessment on the product and concluded that it can be used safely.

The assessment report has been based on published data sourced by the OCSEH and the applicant. Some of this data relates to surfactants in general rather than to the specific chemical polydimethylsiloxane. Considering the widespread use of surfactants, and their generally low toxicity profile as a class, this is considered acceptable.

A risk assessment indicates low risks for users of the product as hazard and exposure were estimated to be low. Based on an assessment of the toxicology, it was considered that there should be no adverse effects on human health from the use of Aquatain AMF Liquid Mosquito Film when used in accordance with the label directions.

- (ii) The APVMA is satisfied that the proposed use of Aquatain AMF Liquid Mosquito Film will not be an undue hazard to the safety of people using anything containing its residues.

As Aquatain AMF Liquid Mosquito Film is not intended for use on food producing situations, and is restricted to being applied to contained areas less than 100m², residues should not occur in food if used according to the product label directions.

- (iii) The APVMA is satisfied that the proposed use of Aquatain AMF Liquid Mosquito Film containing the active constituent polydimethylsiloxane is not likely to be harmful to human beings if used according to the product label directions.

Polydimethylsiloxane has low acute oral, dermal and inhalational toxicity in rats. The compound is a slight eye irritant but not a skin irritant in rabbits. The formulated product Aquatain AMF Liquid Mosquito Film, containing 754 g/L polydimethylsiloxane is likely to have low acute oral, dermal and inhalational toxicity. It is expected to be a slight eye irritant but not a skin irritant or sensitiser. Based on the product toxicology information and/or concentrations of active and other ingredients in the product, Aquatain AMF Liquid Mosquito Film is not classified as a hazardous substance in accordance with NOHSC Approved Criteria for Classifying Hazardous Substances (NOHSC, 2004)

- (iv) The APVMA is satisfied that the proposed use of the new products Aquatain AMF Liquid Mosquito Film containing the active constituent polydimethylsiloxane would not be likely to have an unintended effect that is harmful to animals, plants or things or the environment.

There is unlikely to be an environmental risk under the proposed use pattern where the proposed product will be used in standing waters such as gutters, ponds, drains, water tanks, septic tanks and old tyres in an urban environment because these are limited in size and properly contained.

- (v) The APVMA is satisfied that the proposed use of Aquatain AMF Liquid Mosquito Film would not adversely affect trade between Australia and places outside Australia as the product is not for use in animals or crops producing any major Australian export commodities.
- (vi) In relation to its assessment of efficacy under section 14(3)(f), the APVMA is satisfied that data from trials supporting the efficacy of the product adequately demonstrate that if used according to the product label directions, the product is effective for its proposed uses.

FUTHER INFORMATION

A Public Release Summary (PRS) of the evaluation of this product is available from the APVMA website's 'Consultation' section, www.apvma.gov.au or by using the contact details listed below.

MAKING A SUBMISSION

In accordance with sections 12 and 13 of the Agvet Code, the APVMA invites any person to submit a relevant written submission as to whether the application for registration of Aquatain AMF Liquid Mosquito Film should be granted. Submissions should relate only to matters that the APVMA is required by legislation to take into account in deciding whether to grant the application. These grounds include **occupational health and safety, chemistry and manufacture, residues, safety and first aid, environmental fate and toxicity, trade and efficacy**. Submissions should state the grounds on which they are based. Comments received outside these grounds cannot be considered by the APVMA.

Submissions must be received by the APVMA within **28 days** of the date of this notice and be directed to the contact listed below. All submissions to the APVMA will be acknowledged in writing via email or by post.

Relevant comments will be taken into account by the APVMA in deciding whether the product should be registered and in determining appropriate conditions of registration and product labelling. A summary of relevant comments and the APVMA's response will be published on the APVMA website.

When making a submission please include:

- Contact name
- Company or Group name (if relevant)
- Postal Address
- Email Address (if available)
- The date you made the submission.

All personal and **confidential commercial information (CCI)**¹ material contained in submissions will be treated confidentially.

Written submissions on the APVMA's proposal to grant the application for registration that relate to the **grounds for registration** should be addressed in writing to:

S-abscisic acid in the product ProTone SG Plant Growth Regulator Soluble Granule

The Australian Pesticides and Veterinary Medicines Authority (APVMA) has before it an application from Valent BioSciences, a Division of Sumitomo Chemical Australia Pty Ltd for registration of a new product containing the S-abscisic acid. The product is *ProTone SG Plant Growth Regulator Soluble Granule*. The product is for use to accelerate or increase the coloration of berries and bunches of table grapes (*Vitis* spp.).

PARTICULARS OF THE APPLICATION

Proposed Product Name(s):	ProTone SG Plant Growth Regulator Soluble Granule
Applicant Company:	Valent BioSciences, a Division of Sumitomo Chemical Australia Pty Ltd
Name of Active Constituent:	S-abscisic acid
Signal Heading:	CAUTION
Summary of Proposed Use:	To accelerate or increase the coloration of berries and bunches of table grapes (<i>Vitis</i> spp.)
Pack Sizes:	250g – 1 kg
Withholding Period:	Not required when used as directed

SUMMARY OF THE APVMA'S EVALUATION OF PROTONE SG PLANT GROWTH REGULATOR SOLUBLE GRANULE IN ACCORDANCE WITH SECTION 14(3)(E) AND (F) OF THE AGRICULTURAL AND VETERINARY CHEMICALS CODE (THE 'AGVET CODE'), SCHEDULED TO THE *AGRICULTURAL AND VETERINARY CHEMICALS CODE ACT 1994*

The APVMA has evaluated the application and in its assessment in relation to human and environmental safety under section 14(3)(e) of the Agvet Code, it proposes to determine that:

- (vii) The APVMA is satisfied that the proposed use of *ProTone SG Plant Growth Regulator Soluble Granule* would not be an undue hazard to the safety of people exposed to it during its handling and use.

The Office of Chemical Safety and Environmental Health (OCSEH) in the Department of Health and Ageing has conducted a risk assessment on the product and concluded that it can be used safely.

S-abscisic acid is a new agricultural chemical to the Australian market. The product, *ProTone SG Plant Growth Regulator Soluble Granule* contains 200 g/kg of S-abscisic acid. S-abscisic acid, which naturally occurs in plants, is a monocyclic sesquiterpene plant hormone that is involved in many major processes during plant growth and development, and also plays a role in the development of pigments in fruits including grapes. Since S-abscisic acid naturally occurs in plants and is therefore part of the normal human diet, an evaluation of its toxicokinetic profile was not considered necessary in this instance.

Based on the findings of the acute toxicological studies evaluated, the active has low oral, dermal and inhalational toxicity, is not a skin irritant or a skin sensitiser, but is a slight eye irritant.

Based on the findings of toxicological studies evaluated, the product has low acute oral, dermal and inhalational toxicity. It is a slight eye and skin irritant, but not skin sensitiser. Personal protective equipment for workers has been recommended based on acute and repeat dose risk assessments.

Workers may be exposed to the product when opening containers, mixing/loading, application and cleaning up spills and equipment. The main route of exposure to the spray will be dermal and inhalational, with potential accidental ocular exposure. Given the short term intermittent use pattern and lack of systemic toxicity, together with S-abscisic acid's absence of treatment related systemic toxicity, a quantitative occupational health and safety risk assessment is not required.

The National Drugs and Poisons Schedule Committee agreed that on the basis of the observed eye irritation, which was considered chemically induced eye damage and not simply physical damage, s-abscisic acid and all other stereoisomers of abscisic acid should be included in Schedule 5. Data submitted showed that S-abscisic acid is naturally present in a number of fruits, vegetables and grains and therefore consumed as part of a normal diet containing these items. Based on this data there are no objections on human health grounds to an exemption from requiring an MRL or a Table 5 MRL entry for S-abscisic acid. As a Table 5 MRL entry for S-abscisic acid is supported an ADI or ARfD are not required.

Based on a health risk assessment, First Aid Instructions, Warning Statements and Safety Directions have been recommended and shown on the product label.

Based on an assessment of the toxicology, it was considered that there should be no adverse effects on human health from the use of *ProTone SG Plant Growth Regulator Soluble Granule* when used in accordance with the label directions.

The APVMA accepts the findings and recommendations of the OCSEH evaluation.

- (viii) The APVMA is satisfied that the proposed use of *ProTone SG Plant Growth Regulator Soluble Granule* will not be an undue hazard to the safety of people using anything containing its residues.

Grapes: An MRL for S-abscisic acid in grapes will not be established, as residues in treated grapes are not likely to differ significantly from natural levels of S-abscisic acid. A Table 5 entry will be established. There is not expected to be any risk to Australian trade in grapes, dried grapes or wine.

Animal commodities: MRLs will not be established in animal commodities due to the ubiquitous nature of S-abscisic acid. There is not expected to be any risk to Australian trade in meat, milk and eggs.

- (ix) The APVMA is satisfied that the proposed use of *ProTone SG Plant Growth Regulator Soluble Granule* containing the active constituent S-abscisic acid is not likely to be harmful to human beings if used according to the product label directions

The new active constituent S-abscisic acid has been evaluated for approval. The appropriate signal heading is on the label. First Aid and Safety Directions recommended by the Department of Health and Ageing have been included on the label.

The APVMA accepts the findings and recommendations of its advisors on these criteria.

- (x) The APVMA is satisfied that the proposed use of the new product, *ProTone SG Plant Growth Regulator Soluble Granule*, containing the new active constituent, S-abscisic acid, would not be likely to have an unintended effect that is harmful to animals, plants or things or the environment.

The Department of the Environment, Heritage, Water and the Arts has assessed data in support of the proposed use and has concluded that the risks to the environment from this use are acceptable.

While S-abscisic acid is an important plant hormone found in all vascular plants, an environmental assessment of the proposed use pattern was required as S-abscisic acid will be applied at a very high rate (sprayed onto plants at up to 1000 g S-abscisic acid/ha), with multiple applications possible. As a result both non-target flora and fauna may be exposed to exogenous levels of S-abscisic acid far exceeding those, which occur naturally.

Degradation or absorption on plants, aerobic soil degradation and probably aquatic photolytic degradation are expected to be major routes of dissipation and breakdown of S-abscisic acid in the environment. S-abscisic acid's expected ready degradation in soil should limit its mobility in the soil profile. S-abscisic acid has a low potential for bioaccumulation in fish.

S-abscisic acid is practically non-toxic to birds, fish, aquatic invertebrates and algae. Based on a literature study, S-abscisic acid may have toxic effects on duckweed and other aquatic plants. However, the risk to aquatic species is acceptable based on the results of runoff and spray drift modelling.

Risk to honeybees is acceptable, as are acute and chronic risk to earthworms and risk to soil microflora mediated nitrogen transformation or carbon mineralisation. As studies on the effect of S-abscisic acid on other non-target beneficial insects were not provided, an IPM label warning has been recommended.

S-abscisic acid may have generally transient effects on non-target terrestrial plants, however, risk assessments, including AgDRIFT modelling, based on the most sensitive plant endpoints indicate that risk is acceptable provided the product label's recommendations relating to prohibition of aerial spraying are followed.

The APVMA has considered the findings of the Department of the Environment, Water, Heritage and the Arts and accepts these conclusions.

- (xi) The APVMA is satisfied that the proposed use of *ProTone SG Plant Growth Regulator Soluble Granule* would not adversely affect trade between Australia and places outside Australia.

Given the ubiquitous nature of S-abscisic acid, the residues of S-abscisic acid in treated grapes are not expected to be distinguishable from the levels present naturally in grapes, the risk to export trade in grapes, wine or animal products from animals that have consumed treated grapes is low.

- (xii) In relation to its assessment of efficacy under section 14(3)(f), the APVMA is satisfied that data from trials supporting the efficacy of the product adequately demonstrate that if used according to the product label directions, the product is effective for its proposed uses.

Amendments to the MRL Standard

AMENDMENT NO. 3N

The Australian Pesticides and Veterinary Medicines Authority (APVMA) sets maximum residue limits (MRLs) of agricultural and veterinary chemicals in agricultural produce, particularly produce entering the food chain. These MRLs are set at levels which are not likely to be exceeded if the agricultural or veterinary chemicals are used in accordance with approved label instructions. At the same time the APVMA is satisfied, from dietary exposure assessment, that the levels are not an undue hazard to human health.

The MRL Standard lists MRLs of substances which may arise from the approved use of those substances or other substances, and provides the relevant residue definitions to which these MRLs apply.

The evaluation process takes into account studies on chemistry, metabolism, analytical methodology, residues, good agricultural practice, toxicology and dietary exposure. From time to time the evaluation process results in amendments to the MRL Standard. It should be noted that relevant MRLs are referred to Food Standards Australia New Zealand for incorporation into Standard 1.4.2 of the Food Standards Code entitled "Maximum Residue Limits".

Note: “*” denotes that the maximum residue limit (MRL) has been set at or about the limit of analytical quantitation (see: Residue Guideline No.4, *Maximum Residue Limit Proposals 'At or about the Limit of Analytical Quantitation'*, published in NRA Gazette No.9, p44, 5/9/95).

‘T’ denotes that the MRL, residue definition or use is temporary to enable further experimental work to be carried out in Australia or overseas, and will be reconsidered at some future date.

The MRL Standard is also accessible via the APVMA website, www.apvma.gov.au

The Adverse Experience Reporting Program (AERP) for veterinary medicines and agricultural chemicals: Request for annual summaries (Periodic Summary Updates)

Product registrants are reminded that, in accordance with the Guidelines for the Adverse Experience Reporting Program for veterinary medicines (AERP Vet) and agricultural chemicals (AERP Ag), they are requested to provide the APVMA with an annual summary of all suspected adverse experiences. This summary should be submitted by the close of business 30 September 2010.

To prepare an annual Periodic Summary Update (PSU), the following links and forms can be used:

Veterinary chemical products:

Guidelines: http://www.apvma.gov.au/forms/docs/KP81_G01.pdf

Form: <http://www.apvma.gov.au/forms/docs/KP83-F05.doc>

Agricultural chemical products:

Guidelines: http://www.apvma.gov.au/forms/docs/KP82_G02.pdf

Form: <http://www.apvma.gov.au/forms/docs/KP83-F04.doc>

Registrants are requested to include the APVMA reference number (where available) if an adverse experience being included in the PSU was already reported to the APVMA during the year. This will help avoid redundancy and augment the accuracy of record keeping.

Along with a hard copy of the PSU, submission of editable electronic copy of the PSU is encouraged. This will help faster processing and migration of information into the AERP database.

Application Summaries

The APVMA publishes complete application summaries on the APVMA website, www.apvma.gov.au. They are published in weekly instalments using the date the application was accepted for assessment. If an application summary has been amended, the APVMA will publish the amended version on the website and list it separately in the APVMA Gazette Notice for Application Summaries.

As a requirement of Regulations 8C and E of the Agvet Code, some product names will appear as 'NOT AVAILABLE'.

A summary will be removed from the website 28 days after the application has been finalised. Therefore, some summaries published in this notice may have already been removed prior to the Gazette being published.
