Veterinary Medicines Authority**

The *Agricultural and Veterinary Chemical Code Act 1994* (the Act) commenced on 15 March 1995. The Agricultural and Veterinary Chemicals Code (the Agvet Code) scheduled to the Act requires notices to be published in the *Gazette* containing details of the registration of agricultural and veterinary chemical products and other approvals granted by the Australian Pesticides and Veterinary Medicines Authority. The Agvet Code and related legislation also requires certain other notices to be published in the *Gazette*. A reference to Agvet Codes in this publication is a reference to the Agvet Code in each state and territory jurisdiction.

## GENERAL INFORMATION

The *APVMA (Australian Pesticides and Veterinary Medicines Authority) Gazette* is published fortnightly and contains details of the registration of agricultural and veterinary chemicals products and other approvals granted by the APVMA, notices as required by the Agricultural and Veterinary Chemicals Code (the Agvet Code) and related legislation and a range of regulatory material issued by the APVMA.

Pursuant to section 53(1) of the Agvet Code, the APVMA has decided that it is unnecessary to publish details of applications made for the purpose of notifying minor variations to registration details. The APVMA will however report notifications activity in quarterly statistical reports.

## DISTRIBUTION AND SUBSCRIPTION

The *APVMA Gazette* is published in electronic format only and is available from the APVMA website, [www.apvma.gov.au/publications/gazette/](http://www.apvma.gov.au/publications/gazette/).

If you would like to receive email notification when a new edition is published, please subscribe on the APVMA website.

### **Finalisation of Sheep Ectoparasiticides Review and Affirmation, Variation or Cancellation of Product Labels**

The APVMA has affirmed label approvals listed in Table 3.

The APVMA has varied label approvals listed in Table 4.

The APVMA cancelled the superseded label approvals listed in Tables 3 and 4 on 23 June 2014.

#### **REASONS**

The label affirmations, variations and cancellations are as a result of the outcomes of the review of selected sheep ectoparasiticide products, which was commenced in September 1999 to address the following issues:

- the occupational health of workers, particularly shearers, who may come into contact with treated wool, primarily during wool harvesting
- the potential of chemical residues to harm susceptible organisms in the environment, particularly if the chemicals are released in the course of wool processing, and
- the potential of chemical residues on treated wool to prejudice trade, particularly where overseas wool processing plants discharge scour effluent into river ecosystems.

The review covered all sheep ectoparasiticide products that either contain one or more of 13 selected active constituents and/or have a claim for the treatment of ectoparasites, applied externally, in long wool sheep (six or more week's wool growth). This review has included several actives that were concurrently under individual review, including chlorfenvinphos (finalised 2011), diazinon (ongoing), protetamphos (finalised 2009) and temephos (finalised 2009).

The review did not cover individual animal treatment products for which the claims are limited to wound treatments and/or fly strike dressings, nor does it include a range of products or active constituents which are only approved for use on short wool (less than six weeks wool growth). It did not consider applicator exposure.

The APVMA published a Preliminary Review Findings (PRF) Report in 2006, which included Environmental and Occupational Health and Safety (OHS) assessments. The PRF Report outlined the proposed regulatory action for products covered by the review. Comments in relation to the proposed outcomes of the review were received from registrants, user groups, state government regulators, industry groups and scientific experts in the field. These comments and additional information have been taken into consideration in the preparation of the RF Report.

In the RF Report, the APVMA has concluded that it cannot be satisfied that the continued use of, or any other dealing with the products that are directly affected by the review of selected sheep ectoparasiticides:

- would not be likely to have an effect that is harmful to the occupational health of workers, particularly shearers, handling treated wool, primarily during wool harvesting, and/or
- would not be likely to have an effect that is harmful to the environment, and/or

- would not have the potential to prejudice trade because of chemical residues on treated wool.

The APVMA has determined that the currently approved labels for these products can be varied to include adequate instructions to enable the APVMA to be satisfied in relation to concerns over occupational health and safety, the environment and trade.

**Change in terminology— wool harvest interval**

The APVMA will no longer refer to the wool withholding period (WWP) on labels. It will now be known as the wool harvest interval (WHI) and is the time between the treatment of the animal with the chemical and the harvest of the wool. As outlined in the PRF, this change in terminology will help to distinguish wool residue information from other withholding period statements on the label that concern chemical residues in food.

**Label changes addressing environment concerns**

As a result of the environmental assessment conducted by the Department of the Environment, it is proposed that product labels be varied to include appropriate WHI (see Table 1). The wording of the label statement will be:

*WOOL HARVEST INTERVAL: DO NOT use less than XX months before shearing or fiber collection.*

**Table 1: Recommended wool harvest intervals (WHI) to manage environmental risks relating to the use of selected sheep ectoparasiticides**

ACTIVE CONSTITUENT	RECOMMENDED WOOL HARVEST INTERVAL (WHI)
Cypermethrin and Alpha-cypermethrin <sup>1</sup>	2 months
Cyromazine	2 months
Chlorfenvinphos	1 month
Deltamethrin	2 months
Diazinon	2 months
Dicyclanil	3 months
Diflubenzuron	6 months
Ivermectin	3 months
Propetamphos	2 months
Temephos	6 months—short wool application only
Triflumuron	2 months
Spinosad	6 months—short wool application only.

<sup>1</sup> For the environmental assessment cypermethrin and alpha-cypermethrin are assessed as indistinguishable. Therefore, although there is only one long wool product (containing alpha-cypermethrin) the recommendations cover label amendments for both cypermethrin and alpha-cypermethrin.

**Label changes addressing OHS concerns**

As a result of the OHS assessment undertaken by the Office of Chemical Safety (OCS), it is proposed that product labels be varied to include an appropriate sheep rehandling interval statement (see Table 2). This will enable the APVMA to be satisfied that the use of sheep ectoparasiticide products in accordance with label instructions would not be an undue hazard to the safety of people exposed to them during their handling or people using anything containing their residues.

**Table 2: Recommended sheep re-handling intervals**

ACTIVE CONSTITUENT	RECOMMENDED SHEEP REHANDLING INTERVAL
Alpha-cypermethrin and Cypermethrin	Sheep rehandling interval: Two weeks. If sheep must be handled during this interval, cotton overalls buttoned to the neck and wrist (or equivalent clothing) should be worn.
Chlorfenvinphos	Sheep rehandling interval: Two weeks. If sheep must be handled during this interval, cotton overalls buttoned to the neck and wrist (or equivalent clothing) should be worn.
Cyhalothrin	Sheep rehandling interval: After treatment wait until sheep are dry before rehandling.
Cyromazine	Sheep rehandling interval: After treatment wait until sheep are dry before rehandling.
Deltamethrin	Sheep rehandling interval: Two weeks. If sheep must be handled during this interval, cotton overalls buttoned to the neck and wrist (or equivalent clothing) should be worn.
Diazinon	Sheep rehandling interval: Six weeks. If sheep must be handled during this interval, cotton overalls buttoned to the neck and wrist (or equivalent clothing) should be worn
Dicyclanil	Sheep rehandling interval: After treatment wait until sheep are dry before rehandling.
Ivermectin	Sheep rehandling interval: After treatment wait until sheep are dry before rehandling.
Diflubenzuron	Sheep rehandling interval: After treatment wait until sheep are dry before rehandling.
Propetamphos	<p>Sheep rehandling interval for dipping: Six weeks. If sheep must be handled during this interval, cotton overalls buttoned to the neck and wrist (or equivalent clothing) should be worn</p> <p>Sheep rehandling interval for jetting: Twelve weeks. If sheep must be handled during this interval then cotton overalls buttoned to the neck and wrist (or equivalent clothing) should be worn</p> <p>Sheep rehandling interval for spot application: Six weeks. If sheep must be handled during this interval, cotton overalls buttoned to the neck and wrist (or equivalent clothing) should be worn</p>

ACTIVE CONSTITUENT	RECOMMENDED SHEEP REHANDLING INTERVAL
Spinosad	Sheep rehandling interval: After treatment wait until sheep are dry before rehandling.
Temephos	Sheep rehandling interval: After treatment wait until sheep are dry before rehandling.
Triflumuron	Sheep rehandling interval: After treatment wait until sheep are dry before rehandling.

Note: for products with multiple actives, the active with the longest re-handling interval will determine which interval to be used.

#### **Label changes addressing trade concerns**

The APVMA has determined that there is insufficient justification for direct restrictions on long-wool chemical use for existing approved sheep ectoparasiticide products on trade grounds alone. Further, it will not be possible to set specific trade-related WHIs for sheep ectoparasiticide products to ensure that residues on exported wool meet importing country requirements, particularly in the European Union (EU).

To include specific harvest intervals for the purpose of international trade is not practical. As the EU reassess these environmental standards every three years, it would not be possible to maintain labels. Further, wool is often stored for many years before sale and though it may be treated in a manner that would meet EU regulations of the time it would not be possible to anticipate future changes to these standards. Further, the wool industry has a recently developed a commercial testing program to assess residues in wool destined for sale.

On this basis, the APVMA requires the addition of the following advisory statements to the approved label of all sheep ectoparasiticide products:

*Use of this product may result in wool residues that may not comply with European Union environmental quality standards.*

*Wool treated with this product may contain detectable residues; adequate treatment records should be kept and made available, if requested by wool buyers.*

#### **INSTRUCTIONS FOR POSSESSING, HAVING CUSTODY OF, USING OR DEALING WITH PRODUCT DISPLAYING THE CANCELLED LABEL**

A person may possess, have custody of, use or otherwise deal with the product containing a cancelled label for a period of two years after the day of the cancellation.
