The *Agricultural and Veterinary Chemical Code Act 1994* (the Act) commenced on 15 March 1995. The Agricultural and Veterinary Chemicals Code (the Agvet Code) scheduled to the Act requires notices to be published in the *Gazette* containing details of the registration of agricultural and veterinary chemical products and other approvals granted by the Australian Pesticides and Veterinary Medicines Authority. The Agvet Code and related legislation also requires certain other notices to be published in the *Gazette*. A reference to Agvet Codes in this publication is a reference to the Agvet Code in each state and territory jurisdiction.

## GENERAL INFORMATION

The *APVMA (Australian Pesticides and Veterinary Medicines Authority) Gazette* is published fortnightly and contains details of the registration of agricultural and veterinary chemicals products and other approvals granted by the APVMA, notices as required by the Agricultural and Veterinary Chemicals Code (the Agvet Code) and related legislation and a range of regulatory material issued by the APVMA.

Pursuant to section 8J(1) of the Agvet Code, the APVMA has decided that it is unnecessary to publish details of applications made for the purpose of notifying minor variations to registration details. The APVMA will however report notifications activity in quarterly statistical reports.

## DISTRIBUTION AND SUBSCRIPTION

The *APVMA Gazette* is published in electronic format only and is available from the APVMA website, [www.apvma.gov.au/publications/gazette/](http://www.apvma.gov.au/publications/gazette/).

If you would like to receive email notification when a new edition is published, please subscribe on the APVMA website.

<b>Approval no:</b>	81571

## Dinotefuran in the product Starkle 200 SG Insecticide

The Australian Pesticides and Veterinary Medicines Authority (APVMA) has before it an application from AgNova Technologies Pty Ltd, for registration of a new product containing the active constituent Dinotefuran. The product STARKLE 200 SG INSECTICIDE is for use to control silverleaf whitefly and green mirid in cotton.

### PARTICULARS OF THE APPLICATION

<b>Proposed product name(s):</b>	STARKLE 200 SG INSECTICIDE
<b>Applicant company:</b>	AgNova Technologies Pty Ltd
<b>Name of active constituent:</b>	Dinotefuran
<b>Signal heading:</b>	Schedule 5
<b>Summary of proposed use:</b>	For the control of silverleaf whitefly and green mirid in cotton
<b>Pack sizes:</b>	1 kg—20 kg
<b>Withholding period:</b>	Harvest: DO NOT harvest for 14 days after application. Grazing: DO NOT graze treated cotton crops or cut for stockfeed DO NOT feed cotton trash to livestock
<b>States:</b>	All States

### SUMMARY OF THE APVMA'S EVALUATION OF STARKLE 200 SG INSECTICIDE IN ACCORDANCE WITH SECTIONS 14(1)(C) OF THE AGRICULTURAL AND VETERINARY CHEMICALS CODE (THE 'AGVET CODE'), SCHEDULED TO THE *AGRICULTURAL AND VETERINARY CHEMICALS CODE ACT 1994*

The APVMA has evaluated the application and, in its assessment in relation to human and environmental safety under section 14(3)(e) of the Agvet Code, proposes to determine that:

- (i) The APVMA is satisfied that the proposed use of STARKLE 200 SG INSECTICIDE containing the active constituent Dinotefuran would not be an undue hazard to the safety of people exposed to it during its handling and use.

The Office of Chemical Safety (OCS) in the Department of Health and Ageing has conducted a risk assessment on the product and concluded that it can be used safely.

The exposure and risk assessment information considered in this evaluation indicates that use of the product in accordance with the proposed relevant label particulars is not expected to pose unacceptable risk to humans. Appropriate safety directions and personal protective equipment have been recommended to mitigate identified risks.

- (ii) The APVMA is satisfied that the proposed use of STARKLE 200 SG INSECTICIDE will not be an undue hazard to the safety of people using anything containing its residues provided the product is used in accordance with the proposed label directions. STARKLE 200 SG INSECTICIDE will be used as a foliar spray in cotton. The APVMA Residues Section has evaluated the residues aspect of the proposed product and has recommended amendments to the APVMA MRL Standard for Dinotefuran and for its inclusion in the Food Standards Code.

- (iii) The APVMA is satisfied that the proposed use of STARKLE 200 SG INSECTICIDE containing the active constituent Dinotefuran is not likely to be harmful to human beings if used according to the product label directions.

According to the findings of the acute toxicological studies evaluated, Dinotefuran has low acute oral, dermal and inhalational toxicity in rats. Dinotefuran is not a skin irritant in rabbits but a moderate eye irritant in the same species. Dinotefuran is not a skin sensitiser in the guinea pig. Based on the findings of the acute toxicological studies evaluated, STARKLE 200 SG INSECTICIDE has low acute oral, dermal and inhalational toxicity in rats. STARKLE 200 SG INSECTICIDE was a moderate eye and skin irritant in rabbits, and it was not a skin sensitiser in the guinea pig.

Based on an assessment of the toxicology, it was considered that there should be no adverse effects on human health from the use of STARKLE 200 SG INSECTICIDE when used in accordance with label directions.

- (iv) The APVMA is satisfied that the proposed use of Dinotefuran in the product STARKLE 200 SG INSECTICIDE for the control of silverleaf whitefly and green mirid in cotton would not be likely to have an unintended effect that is harmful to animals, plants or things, or to the environment, if used according to the product label directions.

The APVMA has considered the available environmental fate and effects data in support of the proposed use and has concluded that the risks to the environment are acceptable.

Potential routes of dissipation for Dinotefuran are aqueous photolysis, leaching, and runoff. It is stable to abiotic hydrolysis, but rapidly photodegrades in water. Dinotefuran is moderately persistent in soil under both aerobic and anaerobic conditions. Dinotefuran was moderately persistent under actual use conditions in terrestrial field studies. It is very highly mobile in soil. Because Dinotefuran has low sorption coefficients in soil, it has a high potential to leach and runoff from the application site. The fate of Dinotefuran in aquatic environments will depend on the type of water body. Aqueous photolysis should be important in clear and shallow bodies of water; however, in deep ponds, lakes or reservoirs, aquatic metabolism is expected to dominate the dissipation processes.

Dinotefuran is not toxic to birds and wild mammals, fish, algae, aquatic plants, soil micro-organisms, and non-target terrestrial plants. Dinotefuran is highly toxic to aquatic invertebrates, particularly sediment dwelling organisms. A mandatory no-spray zone of 5 metres must be observed for the protection of aquatic habitats, and to minimise risk of runoff, applications are restricted to slopes of 4% or less. Dinotefuran is also highly toxic to bees and other non-target arthropods. Beehives must be removed or covered during application and for 5 days after treatment after which residues are not expected to impact the overall health of the hives. Use of the product is not considered to be compatible with integrated pest management programs, and the label advises users to minimise spray drift to non-crop areas to minimise impact on beneficial arthropods. When applied according to the protection measures specified on the label, risks of the product to non-target organisms are considered to be acceptable.

The APVMA has considered the findings of the Department of the Environment and accepts these conclusions.

- (v) In relation to its assessment of efficacy under section 14(1)(C), the APVMA is satisfied that data from trials supporting the efficacy of the product adequately demonstrate that, if used according to the proposed label directions, the product will be effective for its proposed uses.

## FURTHER INFORMATION

A Public Release Summary (PRS) of the evaluation of this product is available from the APVMA website's 'Public Consultation' page, [www.apvma.gov.au/news-and-publications/public-consultations](http://www.apvma.gov.au/news-and-publications/public-consultations) or through the contact listed below.

## MAKING A SUBMISSION

In accordance with sections 13 of the Agvet Code, the APVMA invites any person to submit a relevant written submission as to whether the application for registration of STARKLE 200 SG INSECTICIDE should be granted. Submissions should relate only to matters that the APVMA is required by legislation to take into account in deciding whether to grant the application. These grounds include occupational health and safety, chemistry and manufacture, residues, safety and first aid, environmental fate and toxicity, trade and efficacy. Submissions should state the grounds on which they are based. Comments received outside these grounds cannot be considered by the APVMA.

Submissions must be received by the APVMA within 28 days of the date of this notice and be directed to the contact listed below. All submissions to the APVMA will be acknowledged in writing via email or by post.

Relevant comments will be taken into account by the APVMA in deciding whether the product should be registered and in determining appropriate conditions of registration and product labelling.

When making a submission please include:

- contact name
- company or group name (if relevant)
- email or postal address
- the date you made the submission.

All personal and *confidential commercial information (CCI)*<sup>1</sup> material contained in submissions will be treated confidentially.

Written submissions on the APVMA's proposal to grant the application for registration that relate to the grounds for registration should be addressed in writing to:

## New Agricultural Active Constituent—Dinotefuran

The Australian Pesticides and Veterinary Medicines Authority (APVMA) has before it an application for the approval of a new active constituent, dinotefuran for use in end-user products as a systemic insecticide for controlling a range of sucking insects on plants, and for controlling external parasites on dogs.

<b>Common Name</b>	Dinotefuran
<b>IUPAC Name:</b>	(RS)-1-Methyl-2-nitro-3-(tetrahydro-3-furylmethyl)guanidine
<b>Chemical Abstracts Name:</b>	<i>N</i> '-methyl- <i>N</i> -nitro- <i>N</i> '-[(tetrahydro-3-furanyl)methyl]guanidine
<b>Manufacturer's Code/s</b>	MTI-446
<b>CAS Number:</b>	165252-70-0
<b>Molecular Formula:</b>	C <sub>7</sub> H <sub>14</sub> N <sub>4</sub> O <sub>3</sub>
<b>Molecular Weight:</b>	202.21

**Structure:**

<b>Chemical Family:</b>	Nitroguanidine
<b>Mode of Action:</b>	Agonist of the nicotinic acetylcholine receptor.

### SUMMARY OF THE APVMA'S EVALUATION OF DINOTEFURAN ACTIVE CONSTITUENT

The Scientific Assessment and Chemical Review Program of the APVMA has evaluated the chemistry aspects of dinotefuran active constituent (manufacturing process, quality control procedures, batch analysis results and analytical methods) and found them to be acceptable.

On the basis of the data provided, and the toxicological assessment, it is proposed that the following APVMA Active Constituent Standard be established for dinotefuran active constituent:

Constituent	Specification	Level
Dinotefuran	Dinotefuran	Not less than 990 g/kg

Other compounds of toxicological significance are not expected to occur in dinotefuran TGAC as a result of the raw materials and the synthetic route used.

The Office of Chemical Safety has considered the toxicological aspects of dinotefuran TGAC, and advised that there are no toxicological objections to the approval of this chemical.

Based on the data provided, the ADI for dinotefuran is established at 0.22 mg/kg bw/d, based on a NOEL of 22 mg/kg bw/d from a 52 week chronic dog study, in which decreased body weights and body weight gain were noted at higher doses. An ARFD is established for dinotefuran at 1.25 mg/kg bw based on a NOEL of 125 mg/kg bw/d from a developmental study in rabbits, where decreased body weight gain was noted at higher doses.

The Delegate of the Secretary of the Department of Health has made a decision on dinotefuran that it is listed in Schedule 5 of the Standard for the Uniform Scheduling of Medicines and Poisons with no exemptions or cut-offs, along with an implementation date of 1 October 2015.

The APVMA accepts the findings and recommendations of its advisers on these criteria.

The APVMA is satisfied that the proposed importation and use of dinotefuran would not be an undue toxicological hazard to the safety of people exposed to it during its handling and use.

## MAKING A SUBMISSION

In accordance with sections 12 of the Agvet Code, the APVMA invites any person to submit a relevant written submission as to whether the application for approval of dinotefuran should be granted. Submissions should relate only to matters that the APVMA is required by legislation to consider in deciding whether to grant the approval. These grounds include chemistry and manufacture, and toxicity. Submissions should state the grounds on which they are based. Comments received outside these grounds cannot be considered by the APVMA.

Submissions must be received by the APVMA within 28 days of the date of this notice and be directed to the contact listed below. All submissions to the APVMA will be acknowledged in writing via email or by post. A summary of relevant comments and the APVMA's response will be published on the APVMA website.

When making a submission please include the:

- contact name
- company or group name (if relevant)
- postal address
- email address (if available)
- date you made the submission.

All personal and *confidential commercial information (CCI)*<sup>2</sup> material contained in submissions will be treated confidentially.

Written submissions on the APVMA's proposal to grant approval for dinotefuran that relate to the grounds for approval should be addressed in writing to:

## Cancellation of Label Approvals at the Request of the Holder

At the request of the holder, the APVMA has cancelled the following label approvals:

Product no.	Product name	Holder	Cancelled label approvals	Date of effect
58412	IMTRADE SPRAYKILL 250 HERBICIDE	IMTRADE AUSTRALIA PTY LTD	58412/0805 58412/50924	10 August 2015
55185	CYCLONE 440EC HERBICIDE	IMTRADE AUSTRALIA PTY LTD	55185/1002	10 August 2015
59436	CHEMAG SMASH 625 LOW SELECTIVE HERBICIDE	IMTRADE AUSTRALIA PTY LTD	59436/0605 59436/0505	10 August 2015

The following instructions set out how a person can deal with the products bearing a cancelled label.

### SUPPLY

A person may supply or cause to be supplied products bearing a cancelled label manufactured prior to 10 August 2015 at wholesale and retail level, until the 10 August 2016.

After 10 August 2016 it will be an offence against the Agvet Codes to have possession or custody of the products bearing a cancelled label with the intention to supply, or to supply the products bearing a cancelled label.

### USE

A person may continue to use the products bearing a cancelled label according to its label instructions until 10 August 2016.

Any person who possesses, has custody of, uses, or otherwise deals with the listed products bearing a cancelled label in accordance with the above instructions is taken to have been issued with a permit under the Agvet Codes to so possess, have custody of, use or otherwise deal with the products a cancelled label after the approval has been cancelled until 10 August 2016.

The supply and use of the products bearing a cancelled label must be in accordance with the conditions of registration or approval, including any conditions relating to the shelf life or expiry date.

It is an offence to possess, have custody of, use, or deal with the products bearing a cancelled label listed in the table in a manner that contravenes the above instructions.
