## **General information**

The APVMA Gazette is published fortnightly and contains details of the registration of agricultural and veterinary chemicals products and other approvals granted by the APVMA, notices as required by the Agricultural and Veterinary Chemicals Code (the Agvet Code) and related legislation and a range of regulatory material issued by the APVMA.

Pursuant to section 8J(1) of the Agvet Code, the APVMA has decided that it is unnecessary to publish details of applications made for the purpose of notifying minor variations to registration details. The APVMA will however report notifications activity in quarterly statistical reports.

### Background

- 2) Fipronil is a broad-spectrum phenyl pyrazole insecticide acting on the nervous system of insects by contact or ingestion. Fipronil products are used to control insect pests in a wide range of agricultural crops, as an insecticidal seed dressing, and for the control of termites, cockroaches and ants in residential and commercial buildings. In veterinary situations, fipronil products are used as spray or concentrated spot-on formulations to control fleas, ticks and other ectoparasites on dogs and cats, and also in the treatment and control of flea allergy dermatitis.
- 3) The APVMA published a Gazette notice on 7 October 2003 announcing the reconsideration of fipronil active constituent approvals, chemical product registrations and all associated label approvals, under subsection 31(1) of the Agvet Code. Fipronil had been nominated for review following reports of adverse experiences involving skin reactions in animals and humans. The reconsideration scope was limited to toxicology, worker health and safety, animal safety and adequacy of label instructions.
- 4) The Department of Sustainability, Environment, Water, Population and Communities (DSEWPaC) subsequently nominated fipronil for environmental review, based on new information that indicated fipronil and its metabolites may pose a risk to organisms in the environment, particularly aquatic and terrestrial insects.
- 5) The APVMA extended the scope of the reconsideration for select agricultural products on the basis of these environmental concerns, as published in the gazette notice dated 14 August 2012. This extended scope did not apply to veterinary products or agricultural products formulated as baits or gels for ant or cockroach control, nor fly bait stations containing fipronil or termite dusts.
- 6) The 2021 Joint Meeting on Pesticide Residues (JMPR) monograph included the periodic review of fipronil. This review recommended changes to the residues definition and codex maximum residues limits (MRLs) and concluded that long-term dietary exposure may present a public health concern.
- 7) The APVMA has now extended the reconsideration of fipronil to consider the risk of residues in food and to trade for agricultural products approved for use in food producing situations and associated label approvals. This extended scope will allow the APVMA to assess the internationally identified residues and trade concerns in the Australian context.

### Matters the APVMA is proposing to reconsider

- 8) The matters that are to be dealt with in the reconsideration has been extended to include a component residues assessment for selected products containing fipronil and associated label approvals, in addition to component environment, toxicology, and occupational health and safety assessments.
- 9) The matters that the APVMA proposes to reconsider in relation to toxicology, occupational health and safety, animal safety, environment, and label content, and the reasons the APVMA proposes to consider these matters, were set out in the scoping documents available on the APVMA website at [apvma.gov.au/node/15171](http://apvma.gov.au/node/15171) and [apvma.gov.au/node/18701](http://apvma.gov.au/node/18701).

- 10) The APVMA proposes to reconsider the following residues and trade aspects of selected product registrations for fipronil including, but not limited to:
  - a. the residue definitions
  - b. the MRLs
  - c. dietary exposure of fipronil and its metabolites
  - d. the protection of international trade.
- 11) The APVMA will also consider whether product labels carry adequate instructions and warning statements. Such instructions include, but are not limited to:
  - a. withholding period statements
  - b. the spray drift label statements related to livestock buffers zones and the protection of international trade in accordance with the spray drift policy
  - c. trade advice statements including export slaughter intervals.
- 12) The basis for the reconsideration is whether the APVMA is satisfied that:
  - a. the active constituents continue to meet the safety criteria as set out in section 5A of the Agvet Code; and
  - b. the products continue to meet the safety criteria as set out in section 5A of the Agvet Code; and
  - c. the products continue to meet the trade criteria as set out in section 5C of the Agvet Code; and
  - d. the labels continue to meet the labelling criteria as set out in section 5D of the Agvet Code; and
  - e. the active constituent, product or label complies with any requirement prescribed by the Agricultural and Veterinary Chemicals Code Regulations 1995.
- 13) Included in the reconsideration are the chemical product registrations containing fipronil that are approved for use in food producing situations and associated label approvals are listed in Attachment A.

### **Reconsideration work plan**

- 14) The Work Plan for the reconsideration required by section 31(3) of the Agvet Code can be found in Attachment B.

### **Making a submission**

- 15) The APVMA invites submissions on the matters being reconsidered in the review of fipronil.
