# Export Slaughter Intervals (ESIs) of veterinary chemicals for use in sheep

An Export Slaughter Interval (ESI) is the time which should elapse between administration of a veterinary chemical to animals and their slaughter for export. ESIs manage differences between Maximum Residue Limits allowed for chemicals in Australia and its trading partners. ESI advice is particularly important for quality assurance schemes, and especially for producers filling out the National Vendor Declaration (NVD) forms as part of the whole-of-chain management of exported product. ESIs have been agreed to by the sheepmeat industry and the registrant of the veterinary chemical.

The withholding period (WHP) is the minimum period which must elapse between last administration or application of a veterinary chemical product, including treated feed, and the slaughter, collection, harvesting or use of the animal commodity for human consumption. WHPs are mandatory for domestic slaughter and are on the label of every registered product.

The APVMA has compiled the following list of ESIs for products used in sheep. Many of these ESIs were established previously by a third party and the accuracy and validity of the values may be reviewed. As ESIs are subject to change due to alterations in overseas requirements, and ongoing review and consultation with industry, this website is provided to ensure the latest information is available to producers and users.

ESIS FOR PRODUCTS CONTAINING OXYTETRACYCLINE AND CHLORTETRACYCLINE FOR EXPORT TO RUSSIA

The government/industry body SAFEMEAT has applied a Provisional Russian Export Slaughter Interval (ESI) to veterinary medicines and feed additives that contain oxytetracycline and/or chlortetracycline. The Provisional Russian ESIs are specified on the SAFEMEAT notice that can be found at <a href="https://www.safemeat.com.au">www.safemeat.com.au</a>

To meet Safemeat's requirements for slaughter of sheep for the Russian meat market, the Safemeat Provisional Russian ESI of 90 days is required for sheep to be eligible for the Russian meat market. Use Q4 on LPA NVD version S0413 to communicate compliance with this requirement

The APVMA regularly updates this list to include new or revised ESIs. This list was last updated on 1 February 2017.

These products have been added to this list since 9 September 2015 (last update):

ABATAK LV PLUS SELENIUM BROAD SPECTRUM ANTIPARASITIC FOR SHEEP AND LAMBS
